

IKONICA MINOLTA

## SERVICE MANUAL

# bizhub C658/C558/C458 C368/C308/C258 

## Table of Contents

A SAFETY AND IMPORTANT WARNING ITEMS ..... A-1

1. IMPORTANT NOTICE ..... A-2
2. DESCRIPTION ITEMS FOR DANGER, WARNING AND CAUTION ..... A-3
2.1 Description items in this Service Manual ..... A-3
2.2 Description items for safety and important warning items ..... A-3
3. SAFETY WARNINGS ..... A-4
3.1 MODIFICATIONS NOT AUTHORIZED BY KONICA MINOLTA, INC ..... A-4
3.1.1 Actions requiring special attention ..... A-4
3.2 POWER PLUG SELECTION ..... A-5
3.2.1 Power Cord Set or Power Plug ..... A-5
3.3 CHECKPOINTS WHEN PERFORMING ON-SITE SERVICE ..... A-7
3.3.1 Power Supply ..... A-7
3.3.2 Installation Requirements ..... A-11
3.3.3 After Service ..... A-13
3.4 FUSE ..... A-19
3.5 Used Batteries Precautions ..... A-19
3.5.1 ALL Areas ..... A-19
3.5.2 Germany ..... A-19
3.5.3 France ..... A-19
3.5.4 Denmark ..... A-19
3.5.5 Finland, Sweden ..... A-19
3.5.6 Norway ..... A-20
3.6 Laser Safety. ..... A-20
3.6.1 Laser Safety ..... A-20
3.6.2 Internal Laser Radiation ..... A-20
3.6.3 Laser Safety Label ..... A-22
3.6.4 Laser Caution Label ..... A-22
3.6.5 PRECAUTIONS FOR HANDLING THE LASER EQUIPMENT ..... A-23
4. WARNING INDICATIONS ON THE MACHINE ..... A-24
4.1 Warning indications inside the machine ..... A-24
4.2 Warning indications on the boards ..... A-26
5. MEASURES TO TAKE IN CASE OF AN ACCIDENT ..... A-28
B NOTATION OF THE CONTENTS ..... B-1
6. PRECAUTION ON HANDLING THIS MANUAL ..... B-1
7. PRODUCT NAME ..... B-2
8. BRAND NAME ..... B-3
9. FEEDING DIRECTION ..... B-4
10. Note for the Specifications ..... B-5
C PRODUCT SPECIFICATIONS ..... C-1
11. bizhub C368/C308/C258 ..... C-1
1.1 Type. ..... C-1
1.2 Function ..... C-1
1.3 Paper ..... C-2
1.4 Materia ..... C-3
1.5 Print volume ..... C-4
1.5.1 bizhub C368 ..... C-4
1.5.2 bizhub C308 ..... C-4
1.5.3 bizhub C258 ..... C-4
1.6 Machine specification ..... C-4
1.7 Operating environment ..... C-4
1.8 Print function ..... C-4
1.9 Scan function ..... C-5
1.10 Web browser function ..... C-5
12. bizhub C658/C558/C458 ..... C-7
2.1 Type. ..... C-7
2.2 Function ..... C-7
2.3 Paper ..... C-8

2.5 Print volume ..... C-9
2.5.1 bizhub C658 ..... C-9
2.5.2 bizhub C558 ..... C-9
2.5.3 bizhub C458 ..... C-10
2.6 Machine specification ..... C-10
2.7 Operating environment ..... C-10
2.8 Print functions. ..... C-10
2.9 Scan functions ..... C-11
2.10 Web browser function ..... C-11
13. Dual scan document feeder ..... C-13
3.1 Type ..... C-13
3.2 Function ..... C-13
3.3 Type of document ..... C-13
3.4 Particular original ..... C-13
3.5 Prohibited original ..... C-13
3.6 Mixed original feed chart ..... C-14
3.7 Machine specification ..... C-14
3.8 Operating environment ..... C-14
14. DF-629 ..... C-15
4.1 Type ..... C-15
4.2 Function ..... C-15
4.3 Type of document ..... C-15
4.4 Particular original ..... C-15
4.5 Prohibited original ..... C-16
4.6 Mixed original feed chart ..... C-16
4.6.1 For metric area ..... C-16
4.6.2 For inch area ..... C-16
4.7 Machine specification ..... C-16
4.8 Operating environment ..... C-17
15. DF-704 ..... C-18
5.1 Type. ..... C-18
5.2 Function ..... C-18
5.3 Type of document ..... C-18
5.4 Particular original ..... C-18
5.5 Prohibited original ..... C-19
5.6 Mixed original feed chart ..... C-19
5.6.1 For metric area ..... C-19
5.6.2 For inch area ..... C-19
5.7 Machine specification ..... C-19
5.8 Operating environment ..... C-20
16. PC-110/PC-210 ..... C-21
6.1 Type. ..... C-21
6.2 Paper ..... C-21
6.3 Machine specification ..... C-21
6.4 Operating environment ..... C-21
17. PC-115/PC-215 ..... C-22
7.1 Type ..... C-22
7.2 Paper ..... C-22
7.3 Machine specification ..... C-22
7.4 Operating environment ..... C-22
18. PC-410 ..... C-23
8.1 Type ..... C-23
8.2 Paper ..... C-23
8.3 Machine specification ..... C-23
8.4 Operating environment ..... C-23
19. PC-415 ..... C-24
9.1 Type. ..... C-24
9.2 Paper ..... C-24
9.3 Machine specification ..... C-24
9.4 Operating environment ..... C-24
20. LU-207 ..... C-25
10.1 Type ..... C-25
10.2 Paper ..... C-25
10.3 Machine specification ..... C-25
10.4 Operating environment ..... C-25
21. LU-302 ..... C-26
11.1 Type ..... C-26
11.2 Paper ..... C-26
11.3 Machine specification ..... C-26
11.4 Operating environment ..... C-26
22. JS-506 ..... C-27
12.1 Type ..... C-27
12.2 Function ..... C-27
12.3 Capacity ..... C-27
12.4 Offset function ..... C-27
12.5 Machine specification ..... C-27
12.6 Operating environment ..... C-28
23. FS-533 ..... C-29
13.1 Type ..... C-29
13.2 Function ..... C-29
13.3 Paper process ability ..... C-29
13.3.1 Non sort/sort/group ..... C-29
13.3.2 Sort offset/group offset ..... C-29
13.3.3 Sort staple ..... C-30
13.4 Machine specification ..... C-30
13.5 Operating environment ..... C-31
24. PK-519 ..... C-32
14.1 Type ..... C-32
14.2 Function ..... C-32
14.3 Paper ..... C-32
14.4 Machine specification ..... C-32
14.5 Operating environment ..... C-32
25. FS-534/FS-534SD ..... C-33
15.1 Type ..... C-33
15.2 Function ..... C-33
15.3 Paper process ability ..... C-33
15.3.1 Non sort/sort/group ..... C-33
15.3.2 Sort offset/group offset ..... C-34
15.3.3 Sort staple ..... C-35
15.3.4 Saddle stitching/folding ..... C-36
15.3.5 Tri-folding ..... C-36
15.4 Machine specification ..... C-36
15.5 Operating environment ..... C-37
26. FS-536/FS-536SD ..... C-38
16.1 Type ..... C-38
16.2 Function ..... C-38
16.3 Paper process ability ..... C-38
16.3.1 Non sort/sort/group ..... C-38
16.3.2 Sort offset/group offset ..... C-39
16.3.3 Sort staple ..... C-39
16.3.4 Center staple/folding ..... C-40
16.3.5 Tri-folding ..... C-40
16.4 Machine specification ..... C-40
16.5 Operating environment ..... C-41
27. PK-520 ..... C-42
17.1 Type ..... C-42
17.2 Functions ..... C-42
17.3 Paper ..... C-42
17.4 Machine specification ..... C-42
17.5 Operating environment ..... C-42
28. FS-537/FS-537SD ..... C-43
18.1 Type ..... C-43
18.2 Function ..... C-43
18.3 Staple ..... C-43
18.4 Capacity ..... C-43
18.5 Center Fold ..... C-44
18.6 Tri-folding ..... C-44
18.7 Machine specification ..... C-44
18.8 Operating environment ..... C-45
29. PK-523 ..... C-46
19.1 Type ..... C-46
19.2 Function ..... C-46
19.3 Paper ..... C-46
19.4 Machine specification ..... C-46
19.5 Operating environment ..... C-46
30. ZU-609 ..... C-47
20.1 Type ..... C-47
20.2 Function ..... C-47
20.3 Paper process ability ..... C-47
20.3.1 Paper size ..... C-47
20.3.2 Number of sets stacked of the Z-folding ..... C-47
20.3.3 Number of stacked sheets of double-folding ..... C-47
20.4 Machine specification ..... C-47
20.5 Operating environment ..... C-47
31. JS-602 ..... C-48
21.1 Type ..... C-48
21.2 Function ..... C-48
21.3 Paper ..... C-48
21.4 Machine specification ..... C-48
21.5 Operating environment ..... C-48
32. PI-507 ..... C-49
22.1 Type ..... C-49
22.2 Function ..... C-49
22.3 Paper ..... C-49
22.4 Machine specification ..... C-49
22.5 Operating environment ..... C-49
33. CU-101. ..... C-50
23.1 Type ..... C-50
23.2 Machine specification ..... C-50
23.3 Operating environment ..... C-50
23.4 Note for the Specifications. ..... C-50
34. CU-102 ..... C-51
24.1 Type ..... C-51
24.2 Machine specification ..... C-51
24.3 Operating environment ..... C-51
24.4 Note for the Specifications ..... C-51
35. FK-514/FK-515 ..... C-52
25.1 Basic specifications ..... C-52
25.1.1 General specifications ..... C-52
25.1.2 Scanning section ..... C-52
25.1.3 Recording section ..... C-53
25.1.4 Line connecting section ..... C-53
25.1.5 Control panel section ..... C-53
25.2 Functional specifications ..... C-54
25.2.1 Dial functions ..... C-54
25.2.2 Transmission ..... C-55
25.2.3 Polling ..... C-56
25.2.4 Line seizure mode and telephone function ..... C-56
25.2.5 Message reception and record ..... C-56
25.2.6 Memory function ..... C-57
25.2.7 Various communication function. ..... C-57
25.2.8 User lists / reports ..... C-57
25.2.9 Other user functions ..... C-58
25.3 Network fax specifications ..... C-58
25.3.1 Internet Fax ..... C-58
25.3.2 IP Address Fax ..... C-59
36. i-Option ..... C-60
26.1 Available function for i-Option. ..... C-60
26.1.1 List of advanced functions ..... C-60
26.1.2 Activation procedures of i-Option ..... C-61
D OVERALL COMPOSITION ..... D-1
37. SYSTEM CONFIGURATION (bizhub C368/C308/C258) ..... D-1
1.1 System configuration ..... D-1
1.1.1 System front view 1 ..... D-1
1.1.2 System front view 2 ..... D-2
1.2 Optional configuration ..... D-2
1.2.1 Combination configuration of main body and document options. ..... D-2
1.2.2 Combination configuration of main body and paper feed options ..... D-2
1.2.3 Combination configuration of main body and post-processing options ..... D-2
1.2.4 Combination of main body and fax kit ..... D-2
1.2.5 Combination of main body (scanner section) and heater ..... D-2
1.2.6 Combination configuration of paper feed options and dehumidifier heater ..... D-3
38. SYSTEM CONFIGURATION (bizhub C658/C558/C458) ..... D-4
2.1 System configuration ..... D-4
2.1.1 System front view 1 ..... D-4
2.1.2 System front view 2 ..... D-5
2.2 Optional configuration ..... D-5
2.2.1 Combination configuration of main body and document options. ..... D-5
2.2.2 Combination configuration of main body and paper feed options ..... D-5
2.2.3 Combination configuration of main body and post-processing options ..... D-5
2.2.4 Combination of main body and fax kit ..... D-5
2.2.5 Combination of main body (scanner section) and heater ..... D-5
2.2.6 Combination configuration of paper feed options and dehumidifier heater ..... D-5
39. SECTION CONFIGURATION (bizhub C368/C308/C258) ..... D-7
40. SECTION CONFIGURATION (bizhub C658/C558/C458) ..... D-8
41. PAPER PATH (bizhub C368/C308/C258) ..... D-9
42. PAPER PATH (bizhub C658/C558/C458) ..... D-10
6.1 Main body + FS-537SD + RU-513 + LU-207 + PI-507 ..... D-10
6.2 Main body + FS-536SD + RU-513 + LU-302. ..... D-10
43. CONTROL BLOCK DIAGRAM (bizhub C368/C308/C258) ..... D-11
44. CONTROL BLOCK DIAGRAM (bizhub C658/C558/C458) ..... D-12
45. IMAGE CREATION PROCESS ..... D-13
46. IMAGE FORMING CONTROL (bizhub C368/C308/C258). ..... D-14
47. IMAGE FORMING CONTROL (bizhub C658/C558/C458) ..... D-15
48. PROCESS SPEED (bizhub C368/C308/C258) ..... D-16
49. PROCESS SPEED (bizhub C658/C558/C458) ..... D-17
E SERVICE TOOL ..... E-1
50. bizhub C368/C308/C258 ..... E-1
1.1 Service material list. ..... E-1
1.2 CE tool list ..... E-1
1.3 Utility tool ..... E-1
1.3.1 IC card information setting tool of AU-201/AU-201S/AU-202H/OMNIKEY 5427CK (AU-205H)/SCL-010/YSoft card reader ..... E-1
51. DF-628 ..... E-6
2.1 CE tool list. ..... E-6
52. bizhub C658/C558/C458 ..... E-7
3.1 Service material list. ..... E-7
3.2 CE tool list ..... E-7
3.3 Utility tool ..... E-7
3.3.1 IC card information setting tool of AU-201/AU-201S/AU-202H/OMNIKEY 5427CK (AU-205H)/SCL-010/YSoft card reader ..... E-7
53. Dual Scan Document Feeder ..... E-12
4.1 CE tool list ..... E-12
F PERIODICAL MAINTENANCE ..... F-1
54. Concept of periodical maintenance ..... F-1
55. Periodical maintenance items ..... F-2
2.1 Main unit (bizhub C368/C308/C258) ..... F-2
2.1.1 bizhub C368 ..... F-2
2.1.2 bizhub C308 ..... F-2

2.4.4 FS-537 ..... F-10
2.4.5 FS-537SD ..... F-11
2.4.6 ZU-609 ..... F-11
2.4.7 JS-602 ..... F-11
2.4.8 PI-507 ..... F-11
2.4.9 FS-536 ..... F-12
2.4.10 FS-536SD ..... F-12
2.4.11 FS-533 (C558/C458 only) ..... F-12
56. Periodical replacement parts list ..... F-14
3.1 bizhub C368/C308/C258 ..... F-14
3.2 bizhub C658/C558/C458 ..... F-14
3.3 Option (bizhub C368/C308/C258) ..... F-16
3.3.1 DF-704 ..... F-16
3.3.2 DF-629 ..... F-16
3.3.3 PC-110 ..... F-16
3.3.4 PC-210 ..... F-16
3.3.5 PC-410 ..... F-16
3.3.6 LU-302 ..... F-16
3.3.7 FS-534 ..... F-17
3.3.8 FS-534SD ..... F-17
3.3.9 FS-533 ..... F-17
3.4 Option (bizhub C658/C558/C458) ..... F-17
3.4.1 PC-115 ..... F-17
3.4.2 PC-215 ..... F-17
3.4.3 PC-415 ..... F-17
3.4.4 LU-207 ..... F-18
3.4.5 LU-302 ..... F-18
3.4.6 FS-537 ..... F-18
3.4.7 FS-537SD. ..... F-18
3.4.8 PI-507 ..... F-18
3.4.9 FS-536 ..... F-18
3.4.10 FS-536SD ..... F-18
3.4.11 FS-533 (C558/C458 only) ..... F-19
57. Periodical cleaning parts list (bizhub C368/C308/C258) ..... F-20
4.1 Main unit .....  $\mathrm{F}-20$
4.2 DF-704 ..... F-20
4.3 DF-629 ..... F-20
4.4 FS-534 ..... F-20
4.5 FS-534SD ..... F-20
4.6 FS-533 ..... F-20
58. Periodical cleaning parts list (bizhub C658/C558/C458) ..... F-21
5.1 Main unit ..... F-21
5.2 FS-537 ..... F-21
5.3 FS-537SD ..... F-21
5.4 ZU-609 ..... F-21
5.5 JS-602 ..... F-22
5.6 PI-507 ..... F-22
5.7 FS-536 ..... F-22
5.8 FS-536SD ..... F-22
5.9 FS-533 (C558/C458 only) ..... F-22
59. Concept of consumable/part replacement time ..... F-23
6.1 Consumable/part replacement time (bizhub C368/C308/C258) ..... F-23
6.2 Consumable/part replacement time (bizhub C658/C558/C458) ..... F-23
6.3 Specified condition for replacement time on field standard yield (bizhub C368/C308/C258) ..... F-24
6.3.1 Japan ..... F-24
6.3.2 North America. ..... F-24
6.3.3 Europe ..... F-24
6.4 Specified condition for replacement time on field standard yield (bizhub C658/C558/C458) ..... F-24
6.4.1 Japan ..... F-24
6.4.2 North America ..... F-25
6.4.3 Europe ..... F-25
60. Periodical maintenance procedure bizhub C368/C308/C258 ..... F-26
7.1 Photo conductor section ..... F-26
7.1.1 Replacing the drum unit ..... F-26
7.2 Developing section ..... F-28
7.2.1 Replacing the developing unit ..... F-28
7.3 Toner supply section ..... F-29
7.3.1 Replacing the toner cartridge ..... F-29
7.4 1st transfer section ..... F-29
7.4.1 Cleaning of the image transfer entrance guide. ..... F-29
7.4.2 Cleaning of the IDC sensor window ..... F-30
7.4.3 Replacing the transfer belt unit ..... F-30
7.5 2nd transfer/separation section ..... F-32
7.5.1 Replacing the transfer roller unit ..... F-32
7.6 Toner collection section ..... F-32
7.6.1 Replacing the waste toner box ..... F-32
7.6.2 Cleaning of the area around the waste toner collecting port ..... F-33
7.7 Paper feed section ..... F-33
7.7.1 Replacing the tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller ..... F-33
7.7.2 Replacing the tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller ..... F-33
7.7.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy ..... F-34
7.8 Registration section ..... F-35
7.8.1 Cleaning of the registration roller. ..... F-35
7.9 Fusing section. ..... F-36
7.9.1 Replacing the fusing unit ..... F-36
7.10 Duplex section ..... F-37
7.10.1 Cleaning of the duplex transport rollers ..... F-37
61. Periodical maintenance procedure bizhub C658/C558/C458 ..... F-38
8.1 Housing section ..... F-38
8.1.1 Replacing the toner filter ..... F-38
8.2 Photo conductor section ..... F-38
8.2.1 Replacing the drum unit ..... F-38
8.3 Developing section ..... F-40
8.3.1 Replacing the developing unit ..... F-40
8.4 Toner supply section ..... F-41
8.4.1 Replacing the toner cartridge ..... F-41
8.5 1st transfer section ..... F-42
8.5.1 Cleaning of the image transfer entrance guide. ..... F-42
8.5.2 Cleaning of the IDC sensor window ..... F-42
8.5.3 Replacing the transfer belt unit. ..... F-43
8.6 2nd transfer/separation section ..... F-44
8.6.1 Replacing the transfer roller unit ..... F-44
8.7 Toner collection section ..... F-45
8.7.1 Replacing the waste toner box ..... F-45
8.7.2 Cleaning of the area around the waste toner collecting port ..... F-46
8.8 Document feed section ..... F-46
8.8.1 Replacing the tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller ..... F-46
8.8.2 Replacing the tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller ..... F-46
8.8.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy ..... F-47
8.9 Registration section ..... F-48
8.9.1 Cleaning of the registration roller. ..... F-48
8.10 Fusing section ..... F-49
8.10.1 Replacing the fusing unit (bizhub C658/C558) ..... F-49
8.10.2 Replacing the fusing unit (bizhub C458) ..... F-50
8.10.3 Cleaning of the IH coil (bizhub C658/C558) ..... F-50
8.11 Duplex section ..... F-51
8.11.1 Cleaning of the duplex transport rollers ..... F-51
62. Periodical maintenance procedure dual scan document feeder ..... F-52
9.1 Take-up section ..... F-52
9.1.1 Cleaning of the pick-up roller/feed roller ..... F-52
9.1.2 Cleaning of the separation roller ..... F-52
9.1.3 Cleaning the torque limiter ..... F-53
9.1.4 Replacing the pick-up roller/feed roller ..... F-53
9.1.5 Replacing the separation roller ..... F-54
9.2 Transport section ..... F-55
9.2.1 Cleaning of the miscellaneous rollers ..... F-55
9.2.2 Cleaning of the miscellaneous rolls ..... F-56
9.3 Scanning section ..... F-58
9.3.1 Cleaning of the front side scanning guide ..... F-58
9.3.2 Cleaning of the reflective sensor section ..... F-58
63. Periodical maintenance procedure DF-629 ..... F-59
10.1 Take-up section ..... F-59
10.1.1 Cleaning of the pick-up roller/feed roller ..... F-59
10.1.2 Cleaning of the separation roller ..... F-59
10.1.3 Replacing the paper feed assy ..... F-60
10.1.4 Replacing the pick-up roller/feed roller ..... F-60
10.1.5 Replacing the separation roller assy ..... F-62
10.2 Transport section ..... F-63
10.2.1 Cleaning of the miscellaneous rolls ..... F-63
10.2.2 Cleaning of the miscellaneous rollers ..... F-63
10.3 Scanning section ..... F-64
10.3.1 Cleaning of the scanning guide ..... F-64
10.3.2 Cleaning of the reflective sensor section ..... F-65
64. Periodical maintenance procedure DF-704 ..... F-66
11.1 Take-up section ..... F-66
11.1.1 Cleaning of the pick-up roller/feed roller ..... F-66
11.1.2 Cleaning of the separation roller ..... F-66
11.1.3 Replacing the paper feed assy ..... F-67
11.1.4 Replacing the pick-up roller/feed roller ..... F-67
11.1.5 Replacing the separation roller assy ..... F-69
11.2 Transport section ..... F-70
11.2.1 Cleaning of the miscellaneous rolls ..... F-70
11.2.2 Cleaning of the miscellaneous rollers ..... F-71
11.3 Scanning section ..... F-73
11.3.1 Cleaning of the front side scanning guide ..... F-73
11.3.2 Cleaning of the reflective sensor section ..... F-73
65. Periodical maintenance procedure PC-110/PC-210 ..... F-75
12.1 Paper feed section ..... F-75
12.1.1 Replacing the tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller ..... F-75
12.1.2 Replacing the tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller ..... F-75
66. Periodical maintenance procedure PC-115/PC-215 ..... F-77
13.1 Paper feed section. ..... F-77
13.1.1 Replacing the tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller ..... F-77
13.1.2 Replacing the tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller ..... F-77
67. Periodical maintenance procedure $\mathrm{PC}-410$ ..... F-78
14.1 Paper feed section. ..... F-78
14.1.1 Replacing the feed roller, pick-up roller, separation roller ..... F-78
68. Periodical maintenance procedure PC-415 ..... F-79
15.1 Paper feed section ..... F-79
15.1.1 Replacing the feed roller, pick-up roller, separation roller ..... F-79
69. Periodical maintenance procedure LU-207 ..... F-80
16.1 Paper feed section. ..... F-80
16.1.1 Replacing the pick-up roller ..... F-80
16.1.2 Replacing the feed roller ..... F-80
16.1.3 Replacing the separation roller ..... F-81
70. Periodical maintenance procedure LU-302. ..... F-83
17.1 Paper feed section. ..... F-83
17.1.1 Replacing the pick-up roller ..... F-83
17.1.2 Replacing the feed roller. ..... F-83
17.1.3 Replacing the separation roller ..... F-84
71. Periodical maintenance procedure FS-534/FS-534SD ..... F-85
18.1 Paper exit section ..... F-85
18.1.1 Cleaning procedure for each rollers/each rolls ..... F-85
18.1.2 Cleaning the paddles ..... F-85
18.1.3 Replacing the paddle units ..... F-85
18.1.4 Cleaning procedure for each rollers/each rolls ..... F-86
18.1.5 Cleaning the upper paddle .....  F-87
18.1.6 Cleaning the lower paddle, ..... F-88
18.1.7 Replacing the upper paddle assy ..... F-88
18.1.8 Replacing the lower paddle unit ..... F-89
72. Periodical maintenance procedure FS-533. ..... F-90
19.1 Paper exit section ..... F-90
19.1.1 Cleaning procedure for each parts ..... F-90
19.1.2 Cleaning the paper exit paddle ..... F-90
19.2 Alignment section ..... F-90
19.2.1 Replacing the alignment roller assy F/R ..... F-90
73. Periodical maintenance procedure FS-537/FS-537SD ..... F-92
20.1 Paper exit section ..... F-92
20.1.1 Cleaning procedure for each rollers/each rolls (FS-537SD/FS-537) ..... F-92
20.1.2 Cleaning the paddles (FS-537SD/FS-537) ..... F-93
20.1.3 Replacing the paddle (FS-537SD/FS-537) ..... F-93
20.1.4 Cleaning the exit tray conveyance belt (FS-537SD) ..... F-94
20.1.5 Cleaning the upper paddle (FS-537SD) ..... F-95
20.1.6 Cleaning the lower paddle (FS-537SD). ..... F-95
20.1.7 Replacing the upper paddle (FS-537SD) ..... F-96
20.1.8 Replacing the lower paddle (FS-537SD) ..... F-97
20.2 Sensor section ..... F-97
20.2.1 FNS entrance sensor (PS34) (FS-537SD/FS-537) ..... F-97
20.2.2 FNS middle sensor (PS36) (FS-537SD/FS-537). ..... F-98
20.2.3 Main tray exit sensor (PS37) (FS-537SD/FS-537) ..... F-99
74. Periodical maintenance procedure $\mathrm{ZU}-609$ ..... F-101
21.1 Roller section ..... F-101
21.1.1 Cleaning of the $Z$ fold roller (ZU-609) ..... F-101
75. Periodical maintenance procedure JS-602 ..... F-102
22.1 Paper exit section ..... F-102
22.1.1 Cleaning conveyance roller/paper exit roller (JS-602) ..... F-102
76. Periodical maintenance procedure $\mathrm{PI}-507$ ..... F-103
23.1 Paper feed section ..... F-103
23.1.1 Replacing the pick-up roller/Lw / feed roller/Lw (PI-507) ..... F-103
23.1.2 Replacing separation roller/Lw / torque limiter/Lw (PI-507). ..... F-104
77. Periodical maintenance procedure FS-536/FS-536SD ..... F-106
24.1 Paper exit section ..... F-106
24.1.1 Cleaning procedure for each rollers/each rolls (FS-536/FS-536SD) ..... F-106
24.1.2 Cleaning the paddle (FS-536/FS-536SD). ..... F-106
24.1.3 Replacing the paddle (FS-536/FS-536SD) ..... F-107
24.1.4 Cleaning the upper paddle (FS-536SD) ..... F-108
24.1.5 Cleaning the lower paddle (FS-536SD) ..... F-109
24.1.6 Replacing the upper paddle (FS-536SD) ..... F-109
24.1.7 Replacing the lower paddle (FS-536SD) ..... F-110
24.2 Sensor section. ..... F-111
24.2.1 FNS entrance sensor (PS4) (FS-536SD/FS-536) ..... F-111
24.2.2 Main tray exit sensor (PS16) (FS-536SD/FS-536) ..... F-111
G DISASSEMBLY/REASSEMBLY ..... G-1

## 1. IMPORTANT NOTICE

- Because of possible hazards to an inexperienced person servicing this product as well as the risk of damage to the product, KONICA MINOLTA, INC. (hereafter called KM) strongly recommends that all servicing be performed only by KM-trained service technicians.
- Changes may have been made to this product to improve its performance after this Service Manual was printed. Accordingly, KM does not warrant, either explicitly or implicitly, that the information contained in this service manual is complete and accurate.
- The user of this service manual must assume all risks of personal injury and/or damage to the product while servicing the product for which this service manual is intended. Therefore, this service manual must be carefully read before doing service work both in the course of technical training and even after that, for performing maintenance and control of the product properly. Keep this service manual also for future service.
- Distributors or KM issue password for customer engineers (CE) as necessary. The password is required for operations or machine settings that are based on this service manual. These customer engineers (CE) must manage the password carefully. Never leak the password to a third party.

## 2. DESCRIPTION ITEMS FOR DANGER, WARNING AND CAUTION

### 2.1 Description items in this Service Manual

In this Service Manual, each of three expressions " $\triangle$ DANGER", " $\triangle W A R N I N G ", ~ a n d ~ " ~ \triangle ~$ CAUTION" are defined as follows.
When servicing the product, the relevant works (disassembling, reassembling, adjustment, repair, maintenance, etc.) need to be conducted with utmost care.
: Action having a high possibility of suffering
death or serious injury

### 2.2 Description items for safety and important warning items

Symbols used for safety and important warning items are defined as follows:
: Precaution when
servicing the product.

| : Prohibition when |
| :--- |
| servicing the product. |
| : Direction when servicing |
| the product. |

Ground/Earth

Illustrations representing the power plug and wall outlet used in the following descriptions are only typical. Their shapes differ depending on the country or region.

## 3. SAFETY WARNINGS

### 3.1 MODIFICATIONS NOT AUTHORIZED BY KONICA MINOLTA, INC.

KONICA MINOLTA brand products are renowned for their high reliability. This reliability is achieved through high-quality design and a solid service network.
Product design is a highly complicated and delicate process where numerous mechanical, physical, and electrical aspects have to be taken into consideration, with the aim of arriving at proper tolerances and safety factors. For this reason, unauthorized modifications involve a high risk of degradation in performance and safety. Such modifications are therefore strictly prohibited. the points listed below are not exhaustive, but they illustrate the reasoning behind this policy.

### 3.1.1 Actions requiring special attention

## $\triangle$ WARNING

- Do not make any modifications to the product unless otherwise instructed by KM.
- Do not use any part not specified by KM.
- Do not use any power cord or power plug not specified by KM.
- Use only the protective fuses specified by KM.

Use of any type of fuse or related part not specified by KM makes safety devices inoperative which may result in a fire from high heat.

- Do not disable fuse functions or use a wire,
 metal clip, solder, or other conductor in place of the fuse.

Fire may result from high heat.

- Do not disable relay functions (for example, inserting a piece of paper between relay contacts to hamper circuit action.)

Fire may result from high heat.

## ©WARNING

- Do not disable safety functions (for example, interlocks and safety circuits).

Safety devices become inoperative, resulting in fire from high heat, electric shock, or injury.

### 3.2 POWER PLUG SELECTION

In some countries or areas, the power plug provided with the product may not fit the wall outlet used in the area. In that case, it is the obligation of the customer engineer (hereafter called the CE) to attach the appropriate power plug or power cord set in order to connect the product to the supply.

### 3.2.1 Power Cord Set or Power Plug

## $\triangle$ WARNING

- Use a power supply cord set which meets the following criteria:
- provided with a plug having configuration intended for the connection to wall outlet appropriate for the product's rated voltage and current, and
- the plug has pin/terminal(s) for grounding, and

- provided with three-conductor cable having enough current capacity, and
- the cord set meets regulatory requirements for the area.
Use of inadequate cord set leads to fire or electric shock.

## $\triangle$ WARNING

- Attach power plug which meets the following criteria:
- having configuration intended for the connection to wall outlet appropriate for the product's rated voltage and current, and
- the plug has pin/terminal(s) for grounding, and
- meets regulatory requirements for the area.
Use of inadequate cord set leads to the product connecting to inadequate power supply (voltage, current capacity, grounding), and may result in fire or electric shock.
- The wires in the power supply cord shall be connected to the terminals of the plug in accordance with the following:

| Color of the wire |  | Terminal of the plug |
| :---: | :---: | :---: |
| Brown | Black | Marked with "L", "A" or "W" <br> or colored RED |
| Light Blue | White | Marked with "N" <br> or colored BLACK |
| Green-and-Yellow | Marked with "E", "PE" or " <br> _ " " colored GREEN <br> or GREEN-AND-YELLOW |  |

- Wrong connection may cancel safeguards within the product, and results in fire or electric shock.

### 3.3 CHECKPOINTS WHEN PERFORMING ON-SITE SERVICE

KONICA MINOLTA brand products are extensively tested before shipping, to ensure that all applicable safety standards are met, in order to protect the customer and customer engineer (hereafter called the CE) from the risk of injury. However, in daily use, any electrical equipment may be subject to parts wear and eventual failure. In order to maintain safety and reliability, the CE must perform regular safety checks.

### 3.3.1 Power Supply

## (1) Connection to Power Supply

## $\triangle$ WARNING

- The power outlet should have a capacity of at least the maximum power consumption and be dedicated only to the product.

The current that can be passed through the outlet is limited and any current exceeding the limit could result in fire.

- If the wall outlet has two or more receptacles and the product and another electrical
 appliance are plugged into this wall outlet, make sure that the total load does not exceed the rating of the wall outlet. The current that can be passed through the outlet is limited and any current exceeding the limit could result in a fire.

## \. WARNING

- Do not use any conversion plug adapter even if the power plug shape does not match your wall outlet.

The shapes of the power plug and the wall outlet are set according to the voltage and allowable current. Use of a conversion plug adapter could result in an abnormal voltage or insufficient current capacity, leading to a fire. It may also result in an electric shock due to a grounding failure.
If the plug shape does not match the wall outlet, request the user to perform power source installation work.

- Make sure the power cord is plugged into the wall outlet securely.

If the power plug is left loose in the wall outlet, contact failure may occur, leading to
 abnormal heating of the power plug and a risk of fire.
(2) Ground Connection

## ©WARNING

- Check whether the product is grounded properly.

If current leakage occurs in an ungrounded product, you may suffer electric shock while operating the product.

Connect power plug to grounded wall outlet.

## . WARNING

- Make sure of correct ground connection. If the grounding wire is connected to an inappropriate part, there is a risk of explosion or electric shock. Do not connect the grounding wire to any of the following parts:
a. Gas pipe: Gas explosion or fire may result.
b. Lightning rod: Risk of electric shock or fire during lightning.
c. Grounding wire for telephone line: Risk of electric shock or fire during lightning.
d. Water pipe and faucet: These parts do not serve as a ground connection because of a plastic part that is very often installed midway within the water pipe.
(3) Power Plug and Cord

## $\triangle$ WARNING

- When using the power cord set (inlet type) that came with this product, make sure the connector is securely inserted in the inlet of the product.

When a securing measure is provided, secure the cord with the fixture properly. If the power cord (inlet type) is not connected to the product securely, a contact problem may lead to increased resistance, overheating, and risk of fire.

## \.WARNING

- Do not allow the power cord to be stepped on
 or pinched.

Overheating may occur there, leading to a risk of fire.

- Check whether the power cord is damaged. Check whether the sheath is damaged. If the power plug, cord, or sheath is damaged, replace with a new power cord (with plug and connector on each end) specified by KM. Using the damaged power cord may result in fire or electric shock.
- Do not bundle or tie the power cord.

Overheating may occur there, leading to a risk of fire.

- Check whether dust is collected around the power plug and wall outlet.

Using the power plug and wall outlet without removing dust may result in fire.

- Do not insert the power plug into the wall outlet with a wet hand.

The risk of electric shock exists.

- When unplugging the power cord, grasp the plug, not the cable.

The cable may be broken, leading to a risk of fire and electric shock.

(4) Wiring

## $\triangle$ WARNING

- Never use multi-plug adapters to plug multiple power cords in the same outlet.

If used, the risk of fire exists.

## .WARNING

- When an extension cord is required, use one that meets the rated current, rated voltage, and the relevant safety standards of the country.

Current that can be passed through the extension cable is limited and fire may
 result from the use of an inappropriate type of an extension cable.
Do not use an extension cable reel with the cable taken up. Fire may result.

### 3.3.2 Installation Requirements

(1) Prohibited Installation Places

## ©WARNING

- Do not place the product near flammable materials or volatile materials that may catch fire.

A risk of fire exists.

- Do not place the product in a place exposed
 to water such as rain.

A risk of fire and electric shock exists.
(2) When not Using the Product for a long time

## $\triangle$ WARNING

- When the product is not to be used for an extended period of time (for holidays, for example), instruct the user to turn OFF the power switch and unplug the power cord from the power outlet.

Dust collected around the power plug and outlet may cause fire.
(3) Ventilation

## $\triangle$ CAUTION

- The product generates ozone gas during operation.

If the smell of ozone is present in the following cases, ventilate the room.
a. When the product is used in a poorly ventilated room

b. When making a lot of copies
c. When using multiple products at the same time
(4) Stability

# $\triangle$ CAUTION 

- Be sure to lock the caster stoppers.

In the case of an earthquake, the product may slide, leading to an injury.

### 3.3.3 After Service

(1) Inspection before Servicing

## ©WARNING

- Before conducting an inspection, read all
relevant documentation (service manual,
technical notices, etc.) and proceed with the
inspection following the prescribed procedure
using the recommended personal safety
equipment and using only the prescribed
tools.
Do not make any adjustment not described
in the documentation.
If the prescribed procedure or tool is not
used, the product may break and a risk of
injury or fire exists.
- Before conducting an inspection, be sure to
disconnect the power plugs from the Main
Body and Accessories (Options).
When the power plug is inserted into the
wall outlet, some units are still powered
even if the PoWER switch is turned OFF.
A risk of electric shock exists.

## $\triangle$ CAUTION

- The area around the fixing unit is hot.

You may get burned.

## $\triangle$ CAUTION

- Do not leave the machine unattended during transportation, installation, and/or inspection. If the machine is left unattended, face protrusions toward the wall or take other necessary precautions to prevent a user or other person in the area from stumbling over a protrusion of the machine or being caught by a cable, possibly causing a fall to the floor or other personal injury.
(2) Work Performed with the Product Powered On

## ©WARNING

- Take every care when making adjustments or performing an operation check with the product powered.

If you make adjustments or perform an operation check with the external cover detached, you may touch live or high-
 voltage parts or you may be caught in moving gears or the timing belt, leading to a risk of injury.

- Take every care when servicing with the external cover detached.

High-voltage exists around the drum unit. A risk of electric shock exists.

- If it is absolutely necessary to service the machine with the door open or external covers removed, always be attentive to the motion of the internal parts.

A normally protected part may cause unexpected hazards.

## $\triangle$ CAUTION

- Do not keep gazing at a lamp light during the service procedure with the product powered ON .

Eyestrain may result.

## (3) Safety Checkpoints

## $\triangle$ WARNING

- When a product fault is reported from a user, check parts and repair the fault appropriately with safety in mind.

A damaged product, personal injury, or fire may result.

- Whenever mounting an option on the machine, be attentive to the motion of the other workers performing the task.

Another worker may be injured by a pinch point between the machine and the option.

- When mounting an option on the machine, be careful about the clearance between the machine and the option.

You may be injured with your finger or hand pinched between the machine and the option.

- When removing a part that secures a motor, gear, or other moving part, disassembling a unit, or reinstalling any of such parts and units, be careful about moving parts and use care not to drop any part or unit. During the service procedure, give sufficient support for any heavy unit.

You may be injured by a falling part or unit.

## .WARNING

- Check the external covers and frame for possible sharp edges, burrs, and damage.

They can be a cause of injury during use or servicing.

- When accessing a hard-to-view or narrow spot, be careful about sharp edges and burrs on the frame and parts.

They may injure your hands or fingers.

- Do not allow any metal parts such as clips, staples, and screws to fall into the product.

They can short internal circuits and cause
 electric shock or spark bursting into flame.

- Check wiring for pinched and any other damage.

Current can leak, leading to a risk of electric shock or fire.

- Check high-voltage cables and sheaths for any damage.

Damage may lead to product failure and/or the risk of fire.

- Do not disassemble or adjust the write unit (PH unit) incorporating a laser.

The laser light can enter your eye, leading to a risk of loss of eyesight.

- Do not supply power with the write unit (PH unit) shifted from the specified mounting position.

The laser light can enter your eye, leading to a risk of loss of eyesight.

- After replacing a part to which AC voltage is applied (e.g., optical lamp and fixing lamp), be sure to check the installation state.

A risk of fire exists.

## \. WARNING

- Check the interlock switch and actuator for loosening and check whether the interlock functions properly.

If the interlock does not function, you may receive an electric shock or be injured when you insert your hand in the product (e.g., for clearing paper jam).

- Make sure the wiring cannot come into contact with sharp edges, burrs, or other pointed parts.

Damage may lead to the risk of electric shock or fire.

- Make sure that all screws, components, wiring, connectors, etc. that were removed for safety check and maintenance have been reinstalled in the original location. (Pay special attention to forgotten connectors, pinched cables, forgotten screws, etc.)

A risk of product trouble, personal injury, electric shock, and fire exists.

- Never use any flammable or combustible spray, fluid, gas, or similar substance in and around the product.

Do not use any flammable or combustible dust spray, in particular, to clean the interior of the product.
Fire or explosion may result.

## $\triangle$ CAUTION

- Carefully remove all toner remnants and dust from electrical parts and electrode units such as a charging corona unit.

Toner remnants and dust may lead to product failure and/or the risk of fire.

- Check electrode units such as a charging corona unit for deterioration and signs of leakage.

Damage may lead to product failure and/or the risk of fire.

- When replacing a battery, replace it with a new one as specified.

Dispose of the used battery as instructed on its packaging or by local ordinance.
There is a risk of explosion if the battery is replaced with an incorrect type.
(4) Handling of Consumables

$$
\triangle \text { WARNING }
$$

- For handling of consumables (toner, developer, photoconductor, etc.) and their storage precautions, see MSDS.
(5) Handling of Service Materials

## $\triangle$ CAUTION

- Handle with care according to MSDS.

Use of solvent may involve explosion, fire, or personal injury.

### 3.4 FUSE

## CAUTION

Double pole / neutral fusing

## ATTENTION

Double pôle / fusible sur le neutre.

### 3.5 Used Batteries Precautions

### 3.5.1 ALL Areas

## CAUTION

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer's instructions.

### 3.5.2 Germany

## VORSICHT!

Explosionsgefahr bei unsachgemäßem Austausch der Batterie.
Ersatz nur durch denselben oder einen vom Hersteller empfohlenen gleichwertigen Typ.
Entsorgung gebrauchter Batterien nach Angaben des Herstellers.

### 3.5.3 France

## ATTENTION

Il y a danger d'explosion s'il y a remplacement incorrect de la batterie.
Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.
Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

### 3.5.4 Denmark

## ADVARSEL!

Lithiumbatteri - Eksplosionsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

### 3.5.5 Finland, Sweden

## VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

## VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.

### 3.5.6 Norway

## ADVARSEL

Eksplosjonsfare ved feilaktig skifte av batteri.
Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten.
Brukte batterier kasseres i henhold til fabrikantens instruksjoner.

### 3.6 Laser Safety

### 3.6.1 Laser Safety

This is a digital machine certified as a Class 1 laser product. There is no possibility of danger from a laser, provided the machine is serviced according to the instruction in this manual.

### 3.6.2 Internal Laser Radiation

- This product employs a Class 3B laser diode that emits an invisible laser beam. The laser diode and the scanning polygon mirror are incorporated in the print head unit.
- The print head unit is NOT A FIELD SERVICEABLE ITEM. Therefore, the print head unit should not be opened under any circumstances.

| semiconductor laser |  |  |
| :---: | :--- | :--- |
| Maximum power of the laser diode | bizhub C658/C558/C458 | 25 mW |
|  | bizhub C368/C308/C258 | 15 mW |
|  | bizhub C658 | $15.1 \mu \mathrm{~W}$ |
|  | bizhub C558 | $13.1 \mu \mathrm{~W}$ |
|  | bizhub C458 | $10.1 \mu \mathrm{~W}$ |
|  | bizhub C368 | $8.1 \mu \mathrm{~W}$ |
|  | bizhub C308 | $7.1 \mu \mathrm{~W}$ |
| Wavelength | bizhub C258 | $7.1 \mu \mathrm{~W}$ |
|  | bizhub C658/C558 | 775 to 800 nm |

[1] Laser Aperture of the Print Head Unit $\quad{ }^{[2]} \quad$ Print Head Unit

## (1) U.S.A., Canada (CDRH Regulation)

- This machine is certified as a Class 1 Laser product under Radiation Performance Standard according to the Food, Drug and Cosmetic Act of 1990. Compliance is mandatory for Laser products marketed in the United States and is reported to the Center for Devices and Radiological Health (CDRH) of the U.S. Food and Drug Administration of the U.S. Department of Health and Human Services (DHHS). This means that the device does not produce hazardous laser radiation.
- The label shown on " A.3.6.3 Laser Safety Label" indicates compliance with the CDRH regulations and must be attached to laser products marketed in the United States.

## $\triangle$ CAUTION

Use of controls, adjustments or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

| semiconductor laser |  |  |

### 3.6.3 Laser Safety Label

A laser safety label is attached to the outside of the machine as shown below.
bizhub C658/C558/C458

bizhub C368/C308/C258

### 3.6.4 Laser Caution Label

A laser caution label is attached to the inside of the machine as shown below.

### 3.6.5 PRECAUTIONS FOR HANDLING THE LASER EQUIPMENT

- Be sure to unplug the power cord whenever performing a service job in the laser beam path (around the PH unit).
- If it is absolutely unavoidable to perform a service job with the power cord plugged in, strictly observe the following precautions:

1. Before starting the service job, take off your watch, ring, and other reflective articles and be sure to wear laser protective goggles.
2. Keep other personnel away from the work site.
3. Do not bring any highly reflective tool into the laser beam path during the service procedure.

## 4. WARNING INDICATIONS ON THE MACHINE

Caution labels shown are attached in some areas on/in the machine.
When accessing these areas for maintenance, repair, or adjustment, special care should be taken to avoid burns and electric shock.

### 4.1 Warning indications inside the machine

## $\triangle$ CAUTION

$\triangle$
You may be burned or injured if you touch any area that you are advised not to touch by any caution label. Do not remove caution labels. If any caution label has come off or soiled and therefore the caution cannot be read, contact our service office.
bizhub C658/C558/C458

bizhub C368/C308/C258

### 4.2 Warning indications on the boards

bizhub C658/C558

bizhub C458

bizhub C368/C308/C258

This area generates high voltage.
Be careful not to touch here when the power is turned
ON to avoid getting an electric shock.

## 5. MEASURES TO TAKE IN CASE OF AN ACCIDENT

1. If an accident has occurred, the distributor who has been notified first must immediately take emergency measures to provide relief to affected persons and to prevent further damage.
2. If a report of a serious accident has been received from a customer, an on-site evaluation must be carried out quickly and KM must be notified.
3. To determine the cause of the accident, conditions and materials must be recorded through direct on-site checks, in accordance with instructions issued by KM.
4. For reports and measures concerning serious accidents, follow the regulations specified by every distributor.

## B NOTATION OF THE CONTENTS

1. PRECAUTION ON HANDLING THIS MANUAL

## caution

- Use of this manual should be strictly supervised to avoid disclosure of confidential information.

## 2. PRODUCT NAME

In this manual, each of the products is described as follows:

| 1 | bizhub C658/C558/C458/C368/C308/C258 | Main body |
| ---: | :--- | :--- |
| 2 | Microsoft Windows 7 | Windows 7 |
| 3 | Microsoft Windows 8.1 | Windows 8.1 |
| 4 | Microsoft Windows 10 | Windows 10 |
| 5 | When the description is made in combination of the OS's mentioned <br> above | Windows 7/8.1/10 |

## 3. BRAND NAME

## TRADEMARKS OF OTHER COMPANIES

- The company names and product names mentioned in this manual are the brand name or the registered trademark of each company.

## OWN TRADEMARKS

- KONICA MINOLTA, KONICA MINOLTA logo, bizhub, and PageScope are the registered trademarks of KONICA MINOLTA, INC
- © 2015 KONICA MINOLTA, INC

## 4. FEEDING DIRECTION

- When the long side of the paper is parallel with the feeding direction, it is called short edge feeding. The feeding direction which is perpendicular to the short edge feeding is called the long edge feeding.
- Short edge feeding will be identified with [S (abbreviation for Short edge feeding)] on the paper size. No specific notation is added for the long edge feeding. When the size has only the short edge feeding with no long edge feeding, [S] will not be added to the paper size.
Sample notation

| Paper size | Feeding direction | Notation |
| :---: | :---: | :---: |
| A4 | Long edge feeding | A4 |
|  | Short edge feeding | A4S |
| A3 | Short edge feeding | A3 |

5. Note for the Specifications

- These specifications are subject to change without notice.

## C PRODUCT SPECIFICATIONS

## 1. bizhub C368/C308/C258

### 1.1 Type

| Type | Desktop/console * scanner/printer |
| :--- | :--- |
| Control panel | 9-inch TFT color LCD WVGA (electrostatic touch panel) |
| Printing process | laser electrostatic process copying system |
| Photo conductor | OPC drum: KM-91A |
| Scanning resolution (Main scanning <br> direction) | 600 dpi |
| Scanning resolution (Sub scanning <br> direction) | 600 dpi |
| Exposure lamp | LED light (10W or under) |
| Original glass | Stationary (Mirror scan) |
| Original scanning | • Mirror scanning CCD optical system |
| Registration | Rear left edge |
| Paper feeding separation system (Manual <br> bypass) | Small roller separation system with torque limiter |
| Paper feeding separation system (Tray 1) | Roller separation system with pick-up mechanism |
| Paper feeding separation system (Tray 2) | Roller separation system with pick-up mechanism |
| Exposure system (Exposing system) | 1-beam LD exposing system |
| Exposure system (Scan system) | Polygon mirror scan system |
| Exposure resolution (Main scanning <br> direction) | Equivalent to 1800 dpi |
| Exposure resolution (Sub scanning <br> direction) | 600 dpi |
| Developing system | HMT developing system |
| Charging system | Roller charging system |
| Neutralizing system | Red LED system |
| Image transfer system transfer system (1st)/roller transfer system (2nd) |  |
| Paper separating system | Combination of curvature, separating claws, and bias needle system |
| Fusing system | Halogen lamp |
| Heating system | Ber |

*: Only when the optional paper feed cabinet/desk is installed.

### 1.2 Function

| Types of original | Sheets, Books, Three-dimensional objects |  |
| :---: | :---: | :---: |
| Max. original size | A3 or $11 \times 17$ |  |
| Max. original weight | Max. 2 kg |  |
| Multiple copies | 1 to 9999 |  |
| Warm-up time (at an ambient temperature of $23^{\circ} \mathrm{C} / 73.4^{\circ} \mathrm{F}$ and rated source voltage) | Period from the time Main Power Switch was turned on to the time this machine is ready for printing. |  |

- This machine has the field standard yield which indicates the available print numbers estimated by the quantities and usage of the unit in the market standard job mode. Number of field standard printed pages is described as replacement timing of each consumable in this manual. Yields for each preventative maintenance unit will differ depending on actual usage.

| Printer driver (XPS) | - Windows 7, Windows 7 64-bit, Windows 8, Windows 8 64-bit, Windows 8.1, Windows 8.1 64-bit <br> - Windows Server 2008, Windows Server 2008 64-bit, Windows Server 2008 R2, Windows Server 2012, Windows Server 2012 R2 |
| Work memory | 2 GB |
| Host interface | Ethernet 10Base-T/100Base-TX/1000Base-T, USB1.1/2.0 |
| Built-in fonts (PCL) | European 80 fonts |
|  | Japanese: HGMinchoL, HGPMinchoL, HGGothicB, HGPGothicB |
| Built-in fonts (PostScript 3 Emulation) | European 137 fonts |
|  | Japanese: HGMinchoL, HGGothicB |

### 1.9 Scan function

| Scannable scan range | Conforms to the copy function |
| :---: | :---: |
| Scanning resolution | - Push: $200 \mathrm{dpi} / 300 \mathrm{dpi} / 400 \mathrm{dpi} / 600 \mathrm{dpi}$ <br> - Pull: $100 \mathrm{dpi} / 200 \mathrm{dpi} / 300 \mathrm{dpi} / 400 \mathrm{dpi} / 600 \mathrm{dpi}$ |
| Scanning speed | - DF-629: 80 pages/min *1 <br> - DF-704: 80 pages/min *1 |
| Scanning size (scanner glass) *3 | Width $297 \mathrm{~mm} \times$ Length 431.8 mm (Width 11 11/16 inches $\times$ Length 17 inches) (Max.) |
| Scanning size (DF)*2, *3 | - Width $297 \mathrm{~mm} \times$ Length $1,000 \mathrm{~mm}$ (Width 11 11/16 inches $x$ Length 39 3/8 inches) (Max.): 400 dpi or less <br> - Width $297 \mathrm{~mm} \times$ Length 431.8 mm (Width 11 11/16 inches x Length 17 inches) (Max.): 600 dpi |
| Interface | Ethernet (1000Base-T/100Base-TX/10Base-T) |
| Communication protocol | TCP/IP (FTP, SMB, SMTP, WebDAV) (IPv4/IPv6) |
| Supported operating system | Windows 7, Windows 7 64-bit, Windows 8.1, Windows 8.1 64-bit, Windows 10, Windows 10 64-bit |
| Driver | - TWAIN Driver <br> - HDD TWAIN Driver |
| Function | Scan to E-mail, Scan to SMB, Scan to FTP, Scan to WebDAV, Scan to Web service (WSD scan), TWAIN scan, Scan server sending, Panel link scan |
| Output method | TIFF, PDF, Compact PDF, PDF/A, Linearized PDF, JPEG, XPS Compact XPS, OOXML (pptx, xlsx, docx), Searchable PDF |
| Output page setting | Specified number of separate pages (1 to 999 pages), Multi page |

- *1: When an optional unit is installed

### 1.10 Web browser function

- Main specifications of the web browser installed are as follows.

| Browser engine | Chromium Browser |
| :---: | :---: |
| Supported protocol | - HTTP (HTTP 0.9/1.0/1.1) <br> - HTTPS <br> - TCP/IP |
| Supported markup language | - HTML 4.01 <br> - A part of HTML 5.0 <br> - XHTML 1.1/Basic |
| Style sheet | - CSS3 |
| Script language | - JavaSrcript 1.7 <br> - ECMAScript (3rd/5th/5.1) <br> - Ajax*1 |
| DOM | - Level 1 |

|  | - Level 2 |
| :---: | :---: |
| File type | - JPEG <br> - BMP <br> - PNG <br> - GIF <br> - Animation GIF <br> - PDF |
| Supported SSL/TLS version | - SSL3.0 <br> - TLS1.0 |
| Supported character code | - Japanese (Shift_JIS) <br> - Japanese (ISO-2022-JP) <br> - Japanese (EUC-JP) <br> - Chinese Simplified (GB2312) <br> - Chinese Traditional (Big5) <br> - Western European (ISO-8859-1) <br> - Unicode (UTF-8) |
| PDF viewer | - Adobe Reader LE <br> - PDFium |

- *1: Limited to the JavaScript-supported range only.

## NOTE

- Using the web browser function available with this machine, the contents on the Internet can be accessed from the control panel. Users are responsible for the contents that they access, download, or upload as well as the contents of other communication. Users shall follow the rules of their company and laws of their country. Konica Minolta, Inc. and its group companies accept no responsibility for the users' use of the Internet.

## NOTE

- When using a web browser function, 26 dots from the perimeter of the touch panel area is not sensitive area. It is possible to narrow the non-sensitive area by using [Software Switch Setting] in Service Mode as with followings. However, the touch panel cannot detect touch operation correctly
- Switch No. 143 [00000000] at Bit assignment/[00] at HEX assignment non-sensitive area: 26 dots from the perimeter of the touch panel
- Switch No. 143 [00000001] at Bit assignment/[01] at HEX assignment non-sensitive area: 16 dots from the perimeter of the touch panel
- Switch No. 143 [00000010] at Bit assignment/[02] at HEX assignment non-sensitive area: 9 dots from the perimeter of the touch panel

## 2. bizhub C658/C558/C458

### 2.1 Type

| Type | Desktop/console * scanner/printer |
| :---: | :---: |
| Printing process | Laser electrostatic process copying system |
| Photo conductor | OPC drum: KM-91A |
| Scanning resolution | 600 dpi |
| Exposure lamp | LED light (10W or under) |
| Original glass | Stationary (Mirror scan) |
| Original scanning | - Mirror scanning CCD optical system <br> - Sheet through system when DF is used |
| Registration | Rear left edge |
| Paper feeding separation system (Manual bypass) | Small roller separation system with torque limiter |
| Paper feeding separation system (Tray 1) | Roller separation system with pick-up mechanism |
| Paper feeding separation system (Tray 2) | Roller separation system with pick-up mechanism |
| Exposure system (Exposing system) | - bizhub C658/C558: 2 beam LD exposing system <br> - bizhub C458: 1 beam LD exposing system |
| Exposure system (Scan system) | Polygon mirror scan system |
| Exposure resolution (Main scanning direction) | Equivalent to 1800 dpi |
| Exposure resolution (Sub scanning direction) | 600 dpi |
| Developing system | Dry 2 components developing method, HMT developing system |
| Charging system | Roller charging system |
| Neutralizing system | Red LED system |
| Image transfer system | Belt transfer system (1st)/roller transfer system (2nd) |
| Paper separating system | Combination of curvature, separating claws, and bias needle system |
| Fusing system | - bizhub C658/C558: IH fusing <br> - bizhub C458: Belt fusing |
| Heating system | - bizhub C658/C558: IH heating <br> - bizhub C458: Halogen lamp |

*: Only when the optional paper feed cabinet/desk is installed.

### 2.2 Function

| Types of original | Sheets, Books, Three-dimensional objects |  |
| :---: | :---: | :---: |
| Max. original size | A3 or $11 \times 17$ |  |
| Max. original weight | Max. 2 kg |  |
| Multiple copies | 1 to 9999 |  |
| Warm-up time (at an ambient temperature of $23^{\circ} \mathrm{C} / 73.4^{\circ} \mathrm{F}$ and rated source voltage) | Period from the time Main Power Switch was turned on to the time this machine is ready for printing. |  |
|  | bizhub C658 | - 22 sec. or less (Black print) <br> - 35 sec . or less (Color print) |
|  | bizhub C558 (For Europe models) | - 22 sec . or less |
|  | bizhub C558 (For North America models) | - 28 sec . or less |
|  | bizhub C558 (For Japan and Taiwan models) | - 23 sec. or less (Black print) <br> - 25 sec . or less (Color print) |
|  | bizhub C458 | - 25 sec . or less |
| Image loss | Copy | - Leading edge: 4.2 mm (3/16 inches) (Thin Paper: 5 mm (3/16 inches)) <br> - Trailing edge: 3 mm ( $1 / 8$ inches) <br> - Rear edge: 3 mm (1/8 inches) <br> - Front edge: 3 mm ( $1 / 8$ inches) |
|  | PC print | - Leading edge: 4.2 mm (3/16 inches) <br> - Trailing edge: 4.2 mm (3/16 inches) <br> - Rear edge: 4.2 mm (3/16 inches) <br> - Front edge: 4.2 mm (3/16 inch) |
| First copy time (Tray $1 / 2$ A4 or $8 \frac{1}{2} \times 11$, full size) | bizhub C658 | - 3.0 sec. or less (Black print) <br> - 4.0 sec . or less (Color print) |
|  | bizhub C558 | - 3.5 sec . or less (Black print) <br> - 4.4 sec . or less (Color print) |
|  | bizhub C458 | - 4.0 sec . or less (Black print) |

|  |  | - 5.1 sec. or less (Color print) |
| :---: | :---: | :---: |
| Process speed | Plain paper (Black print, Color print) | bizhub C658: $290 \mathrm{~mm} / \mathrm{s}$ |
|  |  | bizhub C558: 252.2 mm/s |
|  |  | bizhub C458: 211.8 mm/s |
| Copying speed for multi-copy cycle (A4 or $81 / 2 \times 11$, plain paper) | Black print, Color print | bizhub C658: 1 -sided: 65 sheets/min., 2-sided: 65 sheets/min. |
|  |  | bizhub C558: 1 -sided: 55 sheets/min., 2-sided: 55 sheets/min. |
|  |  | bizhub C458: 1 -sided: 45 sheets/min., 2-sided: 45 sheets/min. |
| Fixed zoom ratios | Full size | $\times 1.000$ |
|  | Reduction | $\begin{aligned} & \times 0.500, \times 0.707, \times 0.816, \times 0.866(\text { Japan, Europe }) \\ & \times 0.500, \times 0.647, \times 0.733, \times 0.785(\text { North America) } \end{aligned}$ |
|  | Enlargement | $\begin{aligned} & \times 1.154, \times 1.224, \times 1.414, \times 2.000 \text { (Japan, Europe) } \\ & \times 1.214, \times 1.294, \times 1.545, \times 2.000 \text { (North America) } \end{aligned}$ |
|  | Zoom ratios memory | 3 memories |
| Variable zoom ratios | x0.250 to $\times 4.000$ | in 0.001 increments |
| Paper size | Tray 1 | A3 to B5, A5S, 16K, 8 K $11 \times 17$ to $8^{1 / 2} \times 11,8^{1 / 2} \times 11 S, 5^{1 / 2} \times 8^{1 / 2}$ S, $8 \times 13$ |
|  | Tray 2 | A3 to B5, A5S, A3 wide, SRA3, 16K, 8 K $12^{1 / 4} \times 12$ to $81 / 2 \times 11,8 \frac{1}{2} \times 11 \mathrm{~S}, 5^{1} / 2 \times 8 \frac{1}{2} \mathrm{~S}, 8 \times 13$ |
|  | Manual bypass tray | A3 to A6S, A3 Wide, SRA3, Postcard ( $100 \mathrm{~mm} \times 148 \mathrm{~mm}$ (4 inches $\times 6$ inches)), 16K, 8 K $12^{1} / 4 \times 18 \text { to } 5^{1} / 2 \times 8^{1} / 2,5^{1} / 2 \times 8^{1} / 2 \mathrm{~S}, 4 \times 6 \mathrm{~S}, 8 \times 13$ |
| Copy exit tray capacity | Plain paper | 250 sheets |
|  | Thick paper | 10 sheets |
|  | OHP film | 1 sheet |
|  | Thin paper | 100 sheets |
| External memory function | Supported external memory devices | - USB flash memory compatible with the USB (1.1/2.0) interface <br> - FAT32-formatted memory device <br> - Not including security features (Possible to turn OFF security features) <br> - Memory capacity of 1 GB to 2 GB recommended. * <br> - A USB flash memory that appears as multiple drives on a computer cannot be used. |
| Memory capacity | Main memory | 4GB |
|  | HDD | 250 GB |

- *: Possible to be non-operational products.

### 2.3 Paper

| Type |  | Paper source (maximum tray capacity) |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Tray 1 | Tray 2 | Manual bypass tray |
| Copy paper type | Thin paper ( 52 to $59 \mathrm{~g} / \mathrm{m}^{2}$, $1313 / 16$ to $1511 / 16 \mathrm{lb}$ ) *1 *2 | O (500 sheets) | O (500 sheets) | - |
|  | Plain paper ( 60 to $90 \mathrm{~g} / \mathrm{m}^{2}$, 15 15/16 to 23 15/16 lb) | (500 sheets) | ( 500 sheets) | O (150 sheets) |
|  | Translucent paper | - | - | - |
|  | OHP film *3 | - | - | O (20 sheets) |
|  | Thick 1 ( 91 to $120 \mathrm{~g} / \mathrm{m}^{2}, 24$ $3 / 16$ to $3115 / 16 \mathrm{lb})$ | O (150 sheets) | O (150 sheets) |  |
|  | $\begin{gathered} \text { Thick } 1+\left(121 \text { to } 157 \mathrm{~g} / \mathrm{m}^{2},\right. \\ 323 / 16 \text { to } 413 / 4 \mathrm{lb}) \end{gathered}$ |  |  |  |
|  | Thick 2 ( 158 to $209 \mathrm{~g} / \mathrm{m}^{2}$, 42 to 55 9/16 lb) |  |  |  |
|  | Thick 3 (210 to $256 \mathrm{~g} / \mathrm{m} 2$, $557 / 8$ to $681 / 8 \mathrm{lb}$ ) *2 |  |  |  |
|  | Thick 4 (257 to $300 \mathrm{~g} / \mathrm{m} 2$, $683 / 8 \mathrm{lb}$ to $7913 / 16 \mathrm{lb}$ ) *2 *4 | - | - |  |
|  | Postcard | - | - |  |
|  | Envelope | - | - | O (10 sheets) |
|  | Label sheet | - | - | O (20 sheets) |
|  | Index paper | - | - | O (20 sheets) |

| Type |  | Paper source (maximum tray capacity) |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Tray 1 | Tray 2 | Manual bypass tray |
|  | Long size paper (127 to $210 \mathrm{~g} / \mathrm{m} 2,33$ 13/16 to 55 $7 / 8 \mathrm{lb}$ ) | - | - | $\bigcirc(10$ sheets) *5 |
| Copy paper dimensions | Width | 139.7 mm to 297 mm (5 1/2 inches to 11 11/16 inches) | 139.7 mm to 320 mm (5 1/2 inches to $125 / 8$ inches) | 90 mm to $320 \mathrm{~mm}(3 \mathrm{~g} / 16$ inches to $125 / 8$ inches) |
|  | Length | 182 mm to 431.8 mm (7 3/16 inches to 17 inches) | 182 mm to 457.2 mm (7 $3 / 16$ inches to 18 inches) | 139.7 mm to $1,200 \mathrm{~mm}$ (5 1/2 inches to $471 / 4$ inches) |
|  | Long size paper (Width $x$ Length) | - | - | $\begin{aligned} & 210 \mathrm{~mm} \text { to } 297 \mathrm{~mm} \\ & \times 457.3 \mathrm{~mm} \text { to } 1,200 \mathrm{~mm}(8 \\ & 1 / 4 \text { inches to } 1111 / 16 \\ & \text { inches } \times 18 \text { inches to } 47 \\ & 1 / 4 \text { inches) *5 } \end{aligned}$ |

- *1: Thin paper smaller than A5 size cannot be conveyed.
- *2: Second side is an image guarantee out.
- *3: Black print only.
- *4: Only for feeding landscape oriented A4/ Letter paper and A3/ Ledger
- *5: MK-730 is necessary

NOTE

- OHP film, thick 4, envelope, label sheet, index paper and long size paper cannot be fed for duplex printing.

### 2.4 Material

| Parts name |  | Number of field standard printed pages | Name |
| :---: | :---: | :---: | :---: |
| Toner cartridge (C/M/Y) |  | 26,000 sheets | TN514 |
| Toner cartridge (K) |  | 28,000 sheets |  |
| Drum unit (C/M/Y) | bizhub C658 | 105,000 sheets | DR313 |
|  | bizhub C558 | 100,000 sheets |  |
|  | bizhub C458 | 85,000 sheets (JP), 100,000 sheets (US/ <br> EU) |  |
| Drum unit (K) | bizhub C658 | 150,000 sheets | DR313K |
|  | bizhub C558 | 140,000 sheets |  |
|  | bizhub C458 | 135,000 sheets |  |
| Drum unit (K) | bizhub C658 | 266,000 sheets | DR315K |
|  | bizhub C558 | 251,000 sheets |  |
|  | bizhub C458 | 242,000 sheets |  |
| Developing unit | bizhub C658/C558 | 595,000 sheets (JP), 950,000 sheets (US), 600,000 sheets (EU) | DV619 |
|  | bizhub C458 | 580,000 sheets (JP), 950,000 sheets (US), 600,000 sheets (EU) |  |
| Waste toner box |  | 40,000 sheets | WX-103 |

- This machine has the field standard yield which indicates the available print numbers estimated by the quantities and usage of the unit in the market standard job mode. Number of field standard printed pages is described as replacement timing of each consumable in this manual. Yields for each preventative maintenance unit will differ depending on actual usage.

### 2.5 Print volume

### 2.5.1 bizhub C658

| Items |  | Japan | North America | Europe |
| :---: | :---: | :---: | :---: | :---: |

| Built-in fonts (PostScript 3 Emulation) | European 137 fonts |
|  | Japanese <br> - HGMinchoL, HGGothicB |

### 2.9 Scan functions

| Scanner | Scannable range |  | Same as the copier (Max. $11 \times 17$ : inch area, A3: metric area) |
| :---: | :---: | :---: | :---: |
|  | Scan speed (A4 or $81 / 2 \times 11$, DF scan, 1side original resolution 300 dpi ) |  | 120 pages/min * |
|  | Function |  | Scan to E-mail, Scan to FTP, Scan to SMB, Scan to WebDAV, Devices Profile for Web Services (DPWS), Scan to Box/USB memory, Scan server sending, Scan to Me, Scan to Home, Scan to Web service (WSD scan), Scan to URL |
|  | Scanning resolution |  | - Push: 200 dpi/300 dpi/400 dpi/600 dpi <br> - Pull: $100 \mathrm{dpi} / 200 \mathrm{dpi} / 300 \mathrm{dpi} / 400 \mathrm{dpi} / 600 \mathrm{dpi}$ |
| TWAIN | Driver |  | TWAIN Driver, HDD TWAIN Driver |
|  | Supported operating system |  | - Windows 7, Windows 7 64bit, Windows 8.1, Windows 8.1 64bit, Windows 10 , Windows 10 64bit |
|  | PC |  | Conform to the specification of operating system |
|  | Required memory |  | Conform to the specification of operating system |
|  | Network |  | Computer to which TCP/IP protocol is correctly set |
|  | Hard disk |  | Required 20 MB or more disk space |
| SMB | Supported operating system | Windows | - Windows 7, Windows 7 64bit, Windows 8.1, Windows 8.1 64bit, Windows 10, Windows 10 64bit, Windows Server 2008, Windows Server 2008 64bit, Windows Server 2008 R2 64bit, Windows Server 2012 64bit |
|  |  |  | DFS function is supported only in the environment that structured with the following Windows server operating systems. <br> - Windows Server 2008, Windows Server 2008 R2, Windows Server 2012 |
|  |  |  | Direct hosting functions apply to the following operating systems. <br> - Windows 7, Windows 8.1, Windows 10 <br> (IPv6 function is available only when the Windows Vista or later) |
|  |  | Samba | 2.2.x, 3.x |
|  |  | Novell Netware | Netware 6.5 (SP6 or later) |

- *: When an optional unit is installed

### 2.10 Web browser function

- Main specifications of the web browser installed are as follows.

| Supported protocol | - HTTP (HTTP 0.9/1.0/1.1) <br> - HTTPS <br> - TCP/IP |
| :---: | :---: |
| Supported markup language | - HTML 4.01 <br> - A part of HTML 5.0 <br> - XHTML 1.1/Basic |
| Style sheet | - CSS3 |
| Script language | - JavaSrcript 1.7 <br> - ECMAScript (3rd/5th/5.1) <br> - Ajax*1 |
| DOM | - Level 1 <br> - Level 2 |
| File type | - JPEG <br> - BMP <br> - PNG <br> - GIF <br> - Animation GIF <br> - PDF |
| Supported SSL/TLS version | - SSL3.0 |
| Supported character code | - Japanese (Shift_JIS) <br> - Japanese (ISO-2022-JP) <br> - Japanese (EUC-JP) <br> - Chinese Simplified (GB2312) <br> - Chinese Traditional (Big5) <br> - Western European (ISO-8859-1) <br> - Unicode (UTF-8) |
| PDF viewer | - Adobe Reader LE <br> - PDFium |

- *1: Limited to the JavaScript-supported range only.

## NOTE

- Using the web browser function available with this machine, the contents on the Internet can be accessed from the control panel. Users are responsible for the contents that they access, download, or upload as well as the contents of other communication. Users shall follow the rules of their company and laws of their country. Konica Minolta, Inc. and its group companies accept no responsibility for the users' use of the Internet.
NOTE
- When using a web browser function, 26 dots from the perimeter of the touch panel area is not sensitive area. It is possible to narrow the non-sensitive area by using [Software Switch Setting] in Service Mode as with followings. However, the touch panel cannot detect touch operation correctly
- Switch No. 143 [00000000] at Bit assignment/[00] at HEX assignment non-sensitive area: 26 dots from the perimeter of the touch panel
- Switch No. 143 [00000001] at Bit assignment/[01] at HEX assignment non-sensitive area: 16 dots from the perimeter of the touch panel
- Switch No. 143 [00000010] at Bit assignment/[02] at HEX assignment non-sensitive area: 9 dots from the perimeter of the touch panel

## 3. Dual scan document feeder

### 3.1 Type

| Name | Dual scan document feeder |  |
| :--- | :--- | :--- |
| Type | Paper feed section | Paper feed from top of stack |
|  | Image reading section | Sheet-through system <br> Back side: Reading by CIS |
|  | Exit section | Straight exit system |
|  | Screw clamp to the main body |  |
| Document alignment | Center |  |
| Document loading | Face up |  |

### 3.2 Function

| Mode | Standard mode, Mixed original (same width/different width) detection mode, Scan/FAX mode, Index paper mode |
| :--- | :--- |

### 3.3 Type of document

| Type | Standard mode/thin paper mode | 1-sided mode: $35 \mathrm{~g} / \mathrm{m}^{2}$ to $210 \mathrm{~g} / \mathrm{m}^{2}$ (9 5/16 to $557 / 8 \mathrm{lb}$ ) |
| :---: | :---: | :---: |
|  |  | 2-sided mode: $50 \mathrm{~g} / \mathrm{m}^{2}$ to $210 \mathrm{~g} / \mathrm{m}^{2}(135 / 16$ to $557 / 8 \mathrm{lb})$ |
|  | Mixed original detection mode | 1-sided / 2-sided mode: $50 \mathrm{~g} / \mathrm{m}^{2}$ to $128 \mathrm{~g} / \mathrm{m}^{2}(135 / 16$ to $341 / 16 \mathrm{lb})$ |
|  | Scan/FAX mode | 1-sided mode: $35 \mathrm{~g} / \mathrm{m}^{2}$ to $210 \mathrm{~g} / \mathrm{m}^{2}$ (9 5/16 to $557 / 8 \mathrm{lb}$ ) |
|  |  | 2-sided mode: $50 \mathrm{~g} / \mathrm{m}^{2}$ to $210 \mathrm{~g} / \mathrm{m}^{2}$ (13 5/16 to $\left.557 / 8 \mathrm{lb}\right)$ |
| Detectable document size *1 | Standard mode, Scan/FAX mode | PostcardS, B6S, B5/B5S, B4, A5/A5S, A4/A4S, A3 |
|  | Index paper mode | B5, A4, A4S, B4, A3 |
| Capacity | 300 sheets ( $64 \mathrm{~g} / \mathrm{m}^{2}$ (17 lb)) or stack of 19 mm (3/4 inches) and below (including paper curl) |  |

- *1: For the combined original detection mode, refer to the mixed original feed chart.

### 3.4 Particular original

- If fed, paper feed will be possible to some extent but trouble occurrence will be possible.

| Type of original |  |
| :--- | :--- |
| Sheets lightly curled (Curled amount: 10 to $15 \mathrm{~mm}(3 / 8$ <br> to $9 / 16$ inches)) *1 | Dog-eared, exit failure, transport failure |
| Thermal paper (Heat sensitive paper) | Edge folded, exit failure, transport failure |
| Paper immediately after paper exit from the main body | Paper feed failure, transport failure |
| Paper with many punched holes (e.g., loose leaf *2, CF <br> paper *3) | Multi-page feed due to flashes from holes |
| Folded original (including half-folded and Z-folded <br> originals) *4 | Paper feed failure, transport failure, image distortion |
| Sheets with 2 to 4 holes | Transport failure |
| Coated paper (including inkjet paper) | Paper feed failure, transport failure |

- *1: Limited to vertical feeding
*2: No crease on perforation
*3: Creases must be smoothed out. (amount of float: 15 mm (9/16 inches) or less)
*4: Amount of curl: less than 10 mm (3/8 inches) in vertical and 20 mm (13/16 inches) in horizontal direction

### 3.5 Prohibited original

- Prohibited originals that cause trouble

| Type of original |
| :--- |
| Sheets stapled or clipped together |
| Book original |
| Sheets with paper attached |
| Sheets clipped or notched |
| Torn paper |
| Original weighing less than $35 \mathrm{~g} / \mathrm{m}^{2}(95 / 16 \mathrm{lb})$ or $210 \mathrm{~g} / \mathrm{m}^{2}(557 / 8 \mathrm{lb})$ or more |

| $\quad$ Type of original |
| :--- |
| Significantly curled original (amount of curl exceeding $15 \mathrm{~mm}(9 / 16$ inches)) |
| OHP film |
| Label sheet |
| Offset master paper |
| Glossy photographic paper or glossy enamel paper |

### 3.6 Mixed original feed chart

|  | Max. original size | 297 mm |  | 257 mm |  | 210 mm |  | 182 mm | 148 mm | 128 mm |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mixed original size adjustment |  | A3 | A4 | B4 | B5 | A4S | A5 | B5S | A5S | B6S |
| 297 mm | A3 | $\bigcirc$ | $\bigcirc$ | - | - | - | - | - | - | - |
|  | A4 | © | © | - | - | - | - | - | - | - |
| 257 mm | B4 | $\bigcirc$ | $\bigcirc$ | © | © | - | - | - | - | - |

| 210 mm | A4S | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | © | © | - | - | - |
|  | A5 | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ | ( | © | - | - | - |
| 182 mm | B5S | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | © | - | - |
| 148 mm | A5S | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ | - |
| 128 mm | B6S | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\times$ | $\bigcirc$ | $\bigcirc$ |

| $\bigcirc$ | Same size | Tilted with in $1.5 \%$ or less |
| :--- | :--- | :--- |
| $\bigcirc$ | Mixed original feed available | No regulation of tilted degree |
| $\times$ | No. mixed original feed |  |
| - | Can not set original |  |

### 3.7 Machine specification

### 3.8 Operating environment

- Conforms to the operating environment of the main body.

## 4. DF-629

### 4.1 Type

| Name | Reverse automatic document feeder |  |
| :--- | :--- | :--- |
| Type | Document feed section | Paper feed from top of stack |
|  | Document reading section | Sheet-through system |
|  | Document switchback <br> section | Switchback system |
|  | Document exit section | Straight exit system |
| Installation | Screw clamp to the main body |  |
| Document alignment | Center |  |
| Document loading | Face up |  |
| Option | Stamp unit (SP-501) |  |

### 4.2 Function

| Mode |  | Standard mode, Mixed original detection mode, Scan mode/FAX mode |  |
| :--- | :--- | :--- | :--- |
| Original feeding speed (A4 or <br> $81 / 2 \times 11)$ | Copy | 1-sided $(600 \mathrm{dpi})$ | 55 pages $/ \mathrm{min}$. |
|  |  | 2-sided $(600 \mathrm{dpi})$ | 26 pages $/ \mathrm{min}$. |
|  | Scan/FAX mode | 1-sided $(300 \mathrm{dpi})$ | 80 pages $/ \mathrm{min}$. |
|  |  | 2-sided $(300 \mathrm{dpi})$ | $37 \mathrm{pages} / \mathrm{min}$. |

### 4.3 Type of document

| Type | Standard mode (Plain paper) | 1-sided mode: 35 to $128 \mathrm{~g} / \mathrm{m}^{2}$ (95/16 to $341 / 16 \mathrm{lb}$ ) |
| :---: | :---: | :---: |
|  |  | 2-sided mode: 50 to $128 \mathrm{~g} / \mathrm{m}^{2}$ (13 5/16 to $341 / 16 \mathrm{lb}$ ) |
|  | Mixed original detection mode (Plain paper) *1 | 1-sided / 2-sided mode: 50 to $128 \mathrm{~g} / \mathrm{m}^{2}$ (13 5/16 to $341 / 16 \mathrm{lb}$ ) |
|  | Scan/FAX mode (Plain paper) | 1-sided mode: 35 to $128 \mathrm{~g} / \mathrm{m}^{2}$ (95/16 to $341 / 16 \mathrm{lb}$ ) |
|  |  | 2-sided mode: 50 to $128 \mathrm{~g} / \mathrm{m}^{2}$ (13 5/16 to $341 / 16 \mathrm{lb}$ ) |
| Document size | - Standard mode <br> - Scan/FAX mode | - Japan: Postcard S, B6S to A3 <br> - Europe: A6S to A3 <br> - North America: $51 / 2 \times 81 / 2$ to $11 \times 17$ <br> - Width: 100 mm to 297 mm (3 $15 / 16$ inches to $1111 / 16$ inches) <br> - Length: 139.7 mm to 431.8 mm ( $51 / 2$ inches to 17 inches) (FAX transmission mode: 139.7 mm to $1,000 \mathrm{~mm}$ (5 1/2 inches to $393 / 8$ inches) |
| Capacity | - Standard mode <br> - Mixed original detection mode *1 <br> - Scan/FAX mode | - Japan: 130 sheets ( $68 \mathrm{~g} / \mathrm{m} 2$ (18 $1 / 16 \mathrm{lb})$ ) or stack of 12 mm (1/2 inches) and below (including paper curl) <br> - Europe: 100 sheets $(80 \mathrm{~g} / \mathrm{m} 2(211 / 4 \mathrm{lb}))$ or stack of $12 \mathrm{~mm}(1 / 2$ inches) and below (including paper curl) <br> - North America: 100 sheets ( $75 \mathrm{~g} / \mathrm{m} 2(19 \mathrm{15} / 16 \mathrm{lb})$ ) or stack of 12 mm ( $1 / 2$ inches) and below (including paper curl) |

- *1: For the combined original detection mode, refer to the mixed original feed chart.

### 4.4 Particular original

- If fed, paper feed will be possible to some extent but trouble occurrence will be possible.

| Type of original | Possible trouble |
| :--- | :--- |
| Sheets lightly curled (Curled amount: 10 to $15 \mathrm{~mm}(3 / 8$ <br> to $9 / 16$ inches)) *1 | Dog-eared, exit failure, transport failure |
| Thermal paper (Heat sensitive paper) | Edge folded, exit failure, transport failure |
| Paper immediately after paper exit from the main unit | Paper feed failure, transport failure |
| Paper with many punched holes (e.g., loose leaf *2, CF <br> paper *3) | Multi-page feed due to flashes from holes |
| Folded original (including half-folded and Z-folded <br> originals) *4 | Paper feed failure, transport failure, image distortion |
| Sheets with 2 to 4 holes | Transport failure |
| Coated paper (including inkjet paper) | Paper feed failure, transport failure |

- *1: When the original is less than 10 mm ( $3 / 8$ inches) in vertical and 20 mm ( $13 / 16$ inches) in horizontal direction and the amount of float of the folded original is less than 10 mm ( $3 / 8$ inches), the feed and the image are guaranteed. When the amount of float of the folded original is less than 10 mm (3/8 inches), the feed and the image are guaranteed.
*2: Limited to vertical feeding
*3: No crease on perforation
*4: Creases must be smoothed out. (amount of float: 15 mm ( $9 / 16$ inches) or less)

### 4.5 Prohibited original

Prohibited originals that cause trouble

| Type of original |
| :--- |
| Sheets stapled or clipped together |
| Book original |
| Sheets with paper attached |
| Sheets clipped or notched |
| Torn paper |
| Original weighing less than $35 \mathrm{~g} / \mathrm{m}^{2}(95 / 16 \mathrm{lb})$ or $128 \mathrm{~g} / \mathrm{m}^{2}(34 \mathrm{1} / 16 \mathrm{lb})$ or more |
| Significantly curled original (amount of curl exceeding $15 \mathrm{~mm}(9 / 16 \mathrm{inches}))$ |
| OHP film |
| Label sheet |
| Offset master paper |
| Glossy photographic paper or glossy enamel paper |

### 4.6 Mixed original feed chart

| $\bigcirc$ | Same size | Tilted with in $1.5 \%$ or less |

### 4.7 Machine specification

| Power requirement | Power supply: DC $24 \mathrm{~V}, \mathrm{DC} 5 \mathrm{~V}$ (for recovering from the sleep mode) |
| :--- | :--- |
|  | Supplying method: Supplied from the MFP main body |
| Max. power consumption | 60 W or less |

| Dimension | $611.2 \mathrm{~mm}(\mathrm{~W}) \times 503.6 \mathrm{~mm}(\mathrm{D}) \times 127.1 \mathrm{~mm}(\mathrm{H})(241 / 16$ inches $(\mathrm{W}) \times 1913 / 16$ inches (D) $\times 5$ inches <br> $(\mathrm{H}))$ |
| :--- | :--- |
| Weight | Approx. $9.0 \mathrm{~kg}(1913 / 16 \mathrm{lb})$ |

### 4.8 Operating environment

- Conforms to the operating environment of the main body.

## 5. DF-704

### 5.1 Type

| Name | Reverse automatic document feeder |  |
| :--- | :--- | :--- |
| Type | Document feed section | Paper feed from top of stack |
|  | Document reading section | • Front side: Sheet-through system <br>  |
|  | Document exit section | Straight exit system |
|  | Screw clamp to the main body |  |
| Document alignment | Center |  |
| Document loading | Face up |  |
| Option | Stamp unit (SP-501) |  |

### 5.2 Function

| Mode <br> Original feeding speed (A4 or <br> $81 / 2 \times 11)$ <br> Copy <br>   |  | Standard mode, Mixed original detection mode, Scan mode/FAX mode |  |
| :--- | :--- | :--- | :--- |
|  | Scan/FAX mode | 1-sided $(600 \mathrm{dpi})$ | 55 pages $/ \mathrm{min}$. |
|  | 2-sided $(600 \mathrm{dpi})$ | 110 pages $/ \mathrm{min}$. |  |
|  | 1-sided $(300 \mathrm{dpi})$ | 80 pages $/ \mathrm{min}$. |  |

### 5.3 Type of document

| Type | Standard mode (Plain paper) | 1-sided mode: 35 to $163 \mathrm{~g} / \mathrm{m}^{2}$ (95/16 to $341 / 16 \mathrm{lb}$ ) |
| :---: | :---: | :---: |
|  |  | 2-sided mode: 50 to $163 \mathrm{~g} / \mathrm{m}^{2}$ (13 5/16 to $341 / 16 \mathrm{lb}$ ) |
|  | Mixed original detection mode (Plain paper) *1 | 1-sided / 2-sided mode: 50 to $128 \mathrm{~g} / \mathrm{m}^{2}$ (13 5/16 to $\left.341 / 16 \mathrm{lb}\right)$ |
|  | Scan/FAX mode (Plain paper) | 1-sided mode: 35 to $163 \mathrm{~g} / \mathrm{m}^{2}$ (95/16 to $341 / 16 \mathrm{lb}$ ) |
|  |  | 2-sided mode: 50 to $163 \mathrm{~g} / \mathrm{m}^{2}$ (13 5/16 to $341 / 16 \mathrm{lb}$ ) |
| Document size | - Standard mode <br> - Scan/FAX mode | - Japan: Postcard S, B6S to A3 <br> - Europe: A6S to A3 <br> - North America: $51 / 2 \times 81 / 2$ to $11 \times 17$ <br> - Width: 100 mm to 297 mm <br> - Length: 139.7 mm to 431.8 mm ( $51 / 2$ inches to 17 inches) (FAX transmission mode: 139.7 mm to $1,000 \mathrm{~mm}$ (5 1/2 inches to $393 / 8$ inches) |
| Capacity | - Standard mode <br> - Mixed original detection mode *1 <br> - Scan/FAX mode | - Japan: 130 sheets ( $68 \mathrm{~g} / \mathrm{m} 2(181 / 16 \mathrm{lb})$ ) or stack of $12 \mathrm{~mm}(1 / 2$ inches) and below (including paper curl) <br> - Europe: 100 sheets $(80 \mathrm{~g} / \mathrm{m} 2(211 / 4 \mathrm{lb}))$ or stack of $12 \mathrm{~mm}(1 / 2$ inches) and below (including paper curl) <br> - North America: 100 sheets ( $75 \mathrm{~g} / \mathrm{m} 2(1915 / 16 \mathrm{lb})$ ) or stack of 12 mm (1/2 inches) and below (including paper curl) |

- *1: For the combined original detection mode, refer to the mixed original feed chart.

### 5.4 Particular original

- If fed, paper feed will be possible to some extent but trouble occurrence will be possible.

| Type of original | Possible trouble |
| :--- | :--- |
| Sheets lightly curled (Curled amount: 10 to $15 \mathrm{~mm}(3 / 8$ <br> to $9 / 16$ inches)) *1 | Dog-eared, exit failure, transport failure |
| Thermal paper (Heat sensitive paper) | Edge folded, exit failure, transport failure |
| Paper immediately after paper exit from the main unit | Paper feed failure, transport failure |
| Paper with many punched holes (e.g., loose leaf *2, CF <br> paper *3) | Multi-page feed due to flashes from holes |
| Folded original (including half-folded and Z-folded <br> originals) *4 | Paper feed failure, transport failure, image distortion |
| Sheets with 2 to 4 holes | Transport failure |
| Coated paper (including inkjet paper) | Paper feed failure, transport failure |

- *1: When the original is less than 10 mm (3/8 inches) in vertical and 20 mm (13/16 inches) in horizontal direction and the amount of float of the folded original is less than 10 mm ( $3 / 8$ inches), the feed and the image are guaranteed. When the amount of float of the folded original is less than 10 mm ( $3 / 8$ inches), the feed and the image are guaranteed.
*2: Limited to vertical feeding
*3: No crease on perforation
*4: Creases must be smoothed out. (amount of float: 15 mm ( $9 / 16$ inches) or less)

### 5.5 Prohibited original

Prohibited originals that cause trouble

| Type of original |
| :--- |
| Sheets stapled or clipped together |
| Book original |
| Sheets with paper attached |
| Sheets clipped or notched |
| Torn paper |
| Original weighing less than $35 \mathrm{~g} / \mathrm{m}^{2}(95 / 16 \mathrm{lb})$ or $163 \mathrm{~g} / \mathrm{m}^{2}(43 \mathrm{5} / 16 \mathrm{lb})$ or more |
| Significantly curled original (amount of curl exceeding $15 \mathrm{~mm}(9 / 16 \mathrm{inches}))$ |
| OHP film |
| Label sheet |
| Offset master paper |
| Glossy photographic paper or glossy enamel paper |

### 5.6 Mixed original feed chart

| $\bigcirc$ | Same size | Tilted with in $1.5 \%$ or less |
| :--- | :--- | :--- |
| $\bigcirc$ | Mixed original feed available |  |
| $\times$ | No. mixed original feed |  |
| - | Can not set original |  |

### 5.6.1 For metric area

|  |  |  | Max. original size |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

- *: FS-534SD only

### 15.3 Paper process ability

### 15.3.1 Non sort/sort/group

(1) Sub tray

NOTE

- Non sort only
(a) Paper capacity

| Paper type | Basis weight | Max. capacity (Number of stacked sheets/ Height of stacked sheets) |
| :---: | :---: | :---: |
| Thin paper | 52 to $90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16$ to $2315 / 16 \mathrm{lb})$ | 200 sheets / 35 mm *1 |
| Plain paper |  |  |
| Recycled paper |  |  |
| Thick 1 | 91 to $120 \mathrm{~g} / \mathrm{m}^{2}$ (24 3/16 to $3115 / 16 \mathrm{lb}$ ) | 20 sheets /35 mm *1 |
| Thick 1+ | 121 to $157 \mathrm{~g} / \mathrm{m}^{2}$ (32 3/16 to $\left.413 / 4 \mathrm{lb}\right)$ |  |
| Thick 2 | 158 to $209 \mathrm{~g} / \mathrm{m}^{2}$ ( 42 to $555 / 8 \mathrm{lb}$ ) |  |
| Thick 3 | 210 to $256 \mathrm{~g} / \mathrm{m}^{2}$ (55 7/8 to $\left.681 / 8 \mathrm{lb}\right)$ |  |
| Thick 4 | 257 to $300 \mathrm{~g} / \mathrm{m}^{2}$ (68 3/8 to $7913 / 16 \mathrm{lb}$ ) |  |
| Postcard | $190 \mathrm{~g} / \mathrm{m}^{2}(50 \mathrm{9} / 16 \mathrm{lb})$ |  |
| OHP film | - |  |
| Envelope | - |  |
| Label sheet | - |  |
| Letterhead | - |  |
| Index paper | - |  |
| Long size paper | 127 to $210 \mathrm{~g} / \mathrm{m}^{2}$ (33 13/16 to $557 / 8 \mathrm{lb}$ ) | Not specified *2 |

- *1: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
- *2: Includes falling off the tray

## (b) Paper size

| Type | Size |
| :--- | :--- |
| Regular size paper | - A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3 Wide, Postcard S <br>  <br>  <br>  <br> - Invoice S, Invoice, Letter S, Letter, Legal, Ledger |
| Custom size paper | - Max.: Width $320 \mathrm{~mm} \times$ Length $1,200 \mathrm{~mm}$ (Width $125 / 8$ inches $\times$ Length $471 / 4$ inches) |
|  | - Min.: Width $90 \mathrm{~mm} \times$ Length 139.7 mm (Width $3 / 16$ inches $\times$ Length $51 / 2$ inches) |

## (2) Main tray

(a) Number of stacked sheets

| Paper type | Basis weight | Max. capacity (Number of stacked sheets/Height of stacked sheets) |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | A5/A5S or less | B5/B5S or greater, A4S or less | B4 or greater |
| Thin paper | $\begin{aligned} & 52 \text { to } 90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \text { to } \\ & 2315 / 16 \mathrm{lb}) \end{aligned}$ | - 500 sheets/ 375 mm *1 | - 3,000 sheets/ 375 mm *1 | $\begin{aligned} & 1,500 \text { sheets/ } 187.5 \mathrm{~mm} \\ & * 1 \end{aligned}$ |

- *1: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
- *2: FS-534SD

## (b) Paper size

| Type |  |
| :--- | :--- |
| Regular size paper | - A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3 Wide, Postcard S |
|  | - Invoice S, Invoice, Letter S, Letter, Legal, Ledger |
|  | • $16 \mathrm{~K} \mathrm{~S}, 16 \mathrm{~K}, 8 \mathrm{~K}$ |

## (3) 3rd tray

NOTE

## - Non sort only

(a) Paper capacity

| Paper type | Basis weight <br> Max. capacity (Number of stacked sheets/ <br> Height of stacked sheets) |  |
| :--- | :--- | :--- |
| Thin paper | 52 to $59 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16$ to $1511 / 16 \mathrm{lb})$ | 100 sheets/ 22.5 mm |
| Plain paper | 60 to $90 \mathrm{~g} / \mathrm{m}^{2}(1515 / 16$ to $2315 / 16 \mathrm{lb})$ |  |
| Recycled paper | 91 to $120 \mathrm{~g} / \mathrm{m}^{2}(243 / 16$ to $3115 / 16 \mathrm{lb})$ | 20 sheets/ 22.5 mm |
| Thick 1 | 121 to $157 \mathrm{~g} / \mathrm{m}^{2}(323 / 16$ to $413 / 4 \mathrm{lb})$ |  |
| Thick $1+$ | 158 to $209 \mathrm{~g} / \mathrm{m}^{2}(42$ to $555 / 8 \mathrm{lb})$ |  |
| Thick 2 | 210 to $256 \mathrm{~g} / \mathrm{m}^{2}(557 / 8$ to $681 / 8 \mathrm{lb})$ |  |
| Thick 3 | $257 \mathrm{to} 300 \mathrm{~g} / \mathrm{m}^{2}(683 / 8$ to $7913 / 16 \mathrm{lb})$ |  |
| Thick 4 | $190 \mathrm{~g} / \mathrm{m}^{2}(50 \mathrm{~g} / 16 \mathrm{lb})$ |  |
| Postcard | - |  |
| OHP film | - |  |
| Envelope | - |  |
| Label sheet | - |  |
| Letterhead |  |  |

- *: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
(b) Paper size

| Type | Size |
| :--- | :--- |
| Regular size paper | - A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3 Wide, Postcard S <br>  <br>  <br>  <br> - Invoice S, Invoice, Letter S, Letter, Legal, Ledger |
| Custom size paper | - Max.: Width $320 \mathrm{~mm} \times$ Length 457.2 mm (Width $125 / 8$ inches $\times$ Length 18 inches) <br>  |

### 15.3.2 Sort offset/group offset

## (1) Main tray

(a) Offset function

| Exit tray | Main tray |
| :--- | :--- |
| Shift amount | $20 \mathrm{~mm} \mathrm{(13/16} \mathrm{inches)}$ |

## (b) Number of stacked sheets

| Paper type | Basis weight | Max. capacity (Number of stacked sheets/Height of stacked sheets)*1 |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | less than B5 | A4/A4S, B5 | B4 or greater |
| Thin paper | $\begin{aligned} & 52 \text { to } 90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \text { to } \\ & 2315 / 16 \mathrm{lb}) \end{aligned}$ | - 500 sheets/ 375 mm <br> - 500 sheets/ 250 mm *2 | - 3,000 sheets/ 375 mm <br> - 2,000 sheets/ 250 mm *2 | 1,500 sheets/ 187.5 mm |
| Plain paper |  |  |  |  |
| Recycled paper |  |  |  |  |
| Thick 1 | 91 to $120 \mathrm{~g} / \mathrm{m}^{2}(243 / 16$ to 31 15/16 lb) | - 20 sheets/ 375 mm <br> - 20 sheets/ 250 mm *1, *2 |  |  |
| Thick 1+ | $\begin{aligned} & 121 \text { to } 157 \mathrm{~g} / \mathrm{m}^{2}(323 / 16 \\ & \text { to } 413 / 4 \mathrm{lb}) \end{aligned}$ |  |  |  |
| Thick 2 | $\begin{aligned} & 158 \text { to } 209 \mathrm{~g} / \mathrm{m}^{2}(42 \text { to } 55 \\ & 5 / 8 \mathrm{lb}) \end{aligned}$ |  |  |  |
| Thick 3 | $\begin{aligned} & 210 \text { to } 256 \mathrm{~g} / \mathrm{m}^{2}(557 / 8 \text { to } \\ & 681 / 8 \mathrm{lb}) \end{aligned}$ |  |  |  |
| Thick 4 | $\begin{aligned} & 257 \text { to } 300 \mathrm{~g} / \mathrm{m}^{2}(683 / 8 \text { to } \\ & 7913 / 16 \mathrm{lb}) \end{aligned}$ |  |  |  |

- *1: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
- *2: FS-534SD

## (c) Paper size

| Type | Size |
| :--- | :--- |
| Regular size paper | - A5, B5S, B5, A4S, A4, B4, A3, SRA3, A3 Wide <br>  <br>  <br>  <br> - Letter S, Letter, Legal, Ledger, Exective S, Exective <br> Custom size paper- Max.: Width $320 \mathrm{~mm} \times$ Length 457.2 mm (Width $125 / 8$ inches $\times$ Length 18 inches) <br>  |

### 15.3.3 Sort staple

## (1) Main tray

(a) Paper capacity

| Paper type | Basis weight | Max. capacity (Number of stacked copy sets/Height of stacked sheets)*1 |  |
| :---: | :---: | :---: | :---: |
|  |  | A4S or less | B4 or less |
| - Thin paper <br> - Plain paper <br> - Recycled paper | $\begin{aligned} & 52 \text { to } 90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \text { to } 23 \\ & 15 / 16 \mathrm{lb}) \end{aligned}$ | - 100 sets / 375 mm <br> - 100 sets/ 250 mm *2 | 100 sets/ 187.5 mm |
|  |  | - 50 sets/ 375 mm <br> - 50 sets/ 250 mm *2 | 50 sets/ 187.5 mm |
|  |  | - 30 sets/ 375 mm <br> - 30 sets/ 250 mm *2 | 30 sets/ 187.5 mm |
|  |  | - 25 sets/ 375 mm <br> - 25 sets/ 250 mm *2 | 25 sets/ 187.5 mm |
|  |  | - 20 sets/ 375 mm <br> - 20 sets/ 250 mm *2 | 20 sets/ 187.5 mm |
| Thick 1 | $\begin{aligned} & 91 \text { to } 120 \mathrm{~g} / \mathrm{m}^{2}(243 / 16 \text { to } 31 \\ & 15 / 16 \mathrm{lb}) \end{aligned}$ | - 20 sets/ 375 mm <br> - 20 sets/ 250 mm *2 | 20 sets/ 187.5 mm |
| Thick 1+ | $\begin{aligned} & 121 \text { to } 157 \mathrm{~g} / \mathrm{m}^{2}(323 / 16 \text { to } 41 \\ & 3 / 4 \mathrm{lb}) \end{aligned}$ |  |  |
| Thick 2 | 158 to $209 \mathrm{~g} / \mathrm{m}^{2}$ (42 to $\left.555 / 8 \mathrm{lb}\right)$ |  |  |

- *1: A "tray paper full" condition is determined to exist when either the number of stacked copy sets or the height of stacked sheets reaches a predetermined value.
- *2: FS-534SD
(b) Paper size

| Type |  |
| :--- | :--- |
| Regular size paper | - A5, B5S, B5, A4S, A4, B4, A3 |
|  | •Letter S, Letter, Legal, Ledger, Exective S, Exective |
|  | •16K S, 16K, 8K |

(c) No. of sheets to be stapled

| Modes | Max. No. of sheets to be stapled |
| :--- | :--- |
| Normal mode* | •Thin paper / Plain paper / Recycled paper: 50 sheets <br> - Thick 1: 30 sheets <br> - Thick 1+/ Thick 2: 15 sheets |
| Cover sheet mode | 48 sheets (Thin paper/ Plain paper / Recycled paper) + 2 sheets (Thick paper) |

- *: Maximum stapling sheets/ sets for printing high image density is $20 \times 20$ sets.
(d) Stapling position

| Stapling position | Paper size |
| :--- | :--- |
| Back/Front of the corner (45 degree) | •A4, A3, B5, B4 <br>  |
| Back/Front of the corner (Parallel) | • A4S, B5S, A5 <br>  <br>  <br> - Letter S, Legal |
| Side: Parallel 2 point | - A4S, A4, A3, B5S, B5, B4, A5 <br>  |

15.3.4 Saddle stitching/folding

NOTE

- FS-534SD saddle tray only

| Supported paper in saddle stitching/ folding | - Thin paper ( $52 \mathrm{~g} / \mathrm{m} 2$ to $59 \mathrm{~g} / \mathrm{m} 2(1313 / 16 \mathrm{lb}$ to $1511 / 16 \mathrm{lb})$ ) <br> - Plain paper ( $60 \mathrm{~g} / \mathrm{m} 2$ to $90 \mathrm{~g} / \mathrm{m} 2(1515 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ ) <br> - Thick 1 ( $91 \mathrm{~g} / \mathrm{m} 2$ to $120 \mathrm{~g} / \mathrm{m} 2(243 / 16 \mathrm{lb}$ to $3115 / 16 \mathrm{lb})$ ) *1, *2 <br> - Thick $1+(121 \mathrm{~g} / \mathrm{m} 2 \text { to } 157 \mathrm{~g} / \mathrm{m} 2(32 \mathrm{3} / 16 \mathrm{lb} \text { to } 413 / 4 \mathrm{lb}))^{*} 1$, *2 <br> - Thick 2 ( $158 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2(42 \mathrm{lb}$ to $555 / 8 \mathrm{lb})$ ) *1, *2 |
| :---: | :---: |
| Supported paper sizes | - A4S, B4, A3, A3 Wide, SRA3 <br> - Letter S, Legal, Ledger <br> - 8 K <br> - Custom size paper (Width: 210 mm to 320 mm (8 $1 / 4$ inches to $125 / 8$ inches), Length: 279.4 mm to 457.2 mm (11 inches $\times 18$ inches)) |
| Supported mode and basis weight | - Normal mode: $52 \mathrm{~g} / \mathrm{m} 2$ to $90 \mathrm{~g} / \mathrm{m} 2$ (13 13/16 lb to $2315 / 16 \mathrm{lb})$ <br> - Cover mode: $52 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2(1313 / 16 \mathrm{lb}$ to $555 / 8 \mathrm{lb})$ *3 <br> - Thick paper mode: $91 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2(243 / 16 \mathrm{lb}$ to $555 / 8 \mathrm{lb})$ |
| Number of sheets stacked on the saddle tray | - 1 sheet to 3 sheets: 20 sets <br> - 4 sheets to 10 sheets: 10 sets <br> - 11 sheets to 20 sheets: 5 sets |
| Number of stitching sheets | - Normal mode: 2 sheets to 20 sheets (maximum 80 pages) <br> - Cover mode: 2 sheets to 20 sheets (maximum 80 pages) *4 |
| Stapling position | Saddle stitching (2 staples) |
| Number of folding sheets | - Normal mode: 5 sheets <br> - Thick paper mode: 1 sheet |

- *1: For saddle stitching, available only with 1 cover sheet of cover mode
- *2: For folding, available only with 1 cover sheet
- *3: Use only 1 sheet as a cover sheet for cover mode
- *4: Cover sheet: 1 sheet ( $52 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2 / 1313 / 16 \mathrm{lb}$ to $555 / 8 \mathrm{lb}$ ) + body page: 19 sheets $(52 \mathrm{~g} / \mathrm{m} 2 \mathrm{to} 90 \mathrm{~g} / \mathrm{m} 2 / 1313 / 16 \mathrm{lb}$ to 23 15/16 lb)

### 15.3.5 Tri-folding

NOTE

- FS-534SD saddle tray only

| Supported paper in tri-folding | - Thin paper ( $52 \mathrm{~g} / \mathrm{m} 2$ to $59 \mathrm{~g} / \mathrm{m} 2$ ( $1313 / 16 \mathrm{lb}$ to $1511 / 16 \mathrm{lb})$ ) <br> - Plain paper ( $60 \mathrm{~g} / \mathrm{m} 2$ to $90 \mathrm{~g} / \mathrm{m} 2(1515 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ ) |
| :---: | :---: |
| Supported paper sizes | - A4S <br> - LetterS <br> - 16KS |
| Number of tri-folding sheets and sets * | - 1 sheet folding: 30 sets <br> - 2 sheet foldings: 10 sets <br> - 3 sheet foldings: 10 sets |

- *: Up to 3 sheets in tri-folding

### 15.4 Machine specification

| Power requirement | DC $24 \mathrm{~V} \pm 10 \%$ (supplied from the main body) |
| :--- | :--- |
| Max. power consumption | 56 W or less |
| Dimension | $528 \mathrm{~mm}(\mathrm{~W}) \times 641 \mathrm{~mm}(\mathrm{D}) \times 1,023 \mathrm{~mm}(\mathrm{H})(2013 / 16$ inches (W) $\times 251 / 4$ inches (D) $\times 401 / 4$ <br> inches (H)) |

|  | - $658 \mathrm{~mm}(\mathrm{~W}) \times 641 \mathrm{~mm}(\mathrm{D}) \times 1,065 \mathrm{~mm}(\mathrm{H})(257 / 8$ inches (W) $\times 251 / 4$ inches (D) $\times 41$ 15/16 inches (H)) * 1 |
| :---: | :---: |
| Weight | - $40.0 \mathrm{~kg}(883 / 16 \mathrm{lb})$ <br> - $64.0 \mathrm{~kg}(1411 / 8 \mathrm{lb})$ *2 |

- *1: Size when the paper output tray is pulled out
- *2: FS-534SD

### 15.5 Operating environment

- Conforms to the operating environment of the main body.

16. FS-536/FS-536SD
16.1 Type

| Name | Multi staple finisher (FS-536) <br> Finisher-contained center-staple and tri-fold device (FS-536SD) |
| :--- | :--- |
| Type | Freestanding |
| Document alignment | Center |
| Stapling function | Center 2-point stapling method by fixed stapler (FS-536SD) |
| Consumable | Staples (5,000 staples / cartridge) |

### 16.2 Function

| Mode | - Sort |
| :--- | :--- |
|  | - Group |
|  | - Sort offset |
|  | - Group offset |
|  | - Sort staple |
|  | - Center staple (FS-536SD) |
|  | - Center fold (FS-536SD) |
|  | - Tri-folding (FS-536SD) |

### 16.3 Paper process ability

### 16.3.1 Non sort/sort/group

## (1) Main tray

NOTE
" If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

## (a) Number of stacked sheets

| Paper type | Basis weight | Maximum number of stacked sheets |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | A5/A5S/InvoiceS or less | B5/B5S or greater, A4S/ LetterS or less | B4/Legal or greater |
| Thin paper | 52 to $90 \mathrm{~g} / \mathrm{m}^{2}$ (13 13/16 to 23 15/16 lb) | 500 sheets | - 3,000 sheets (FS-536) <br> - 2,000 sheets (FS-536SD) | 1,500 sheets |
| Plain paper |  |  |  |  |
| Recycled paper |  |  |  |  |
| Thick paper | 91 to $300 \mathrm{~g} / \mathrm{m}^{2}$ (24 $3 / 16$ to 79 13/16 lb) | 20 sheets |  |  |
| Postcard | - |  |  |  |  |  |
| Envelope | - |  |  |  |  |  |
| OHP film | - |  |  |  |  |  |
| Label sheet | - |  |  |  |  |  |
| Letterhead | - |  |  |  |  |  |

(b) Height of stacked sheets

| Paper length | Maximum height of stacked sheets |
| :--- | :--- |
| A4S/LetterS or less | $375 \mathrm{~mm}(143 / 4$ inches $)$ (FS-536), $250 \mathrm{~mm} \mathrm{(9} \mathrm{13/16} \mathrm{inches)} \mathrm{(FS-536SD)}$ |
| B4/Legal or greater | $187.5 \mathrm{~mm} \mathrm{(73/8} \mathrm{inches)}$ |

## (c) Paper size

| Type | Size |
| :--- | :--- |
| Regular size paper | A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3 wide, Postcard S <br> Invoice, InvoiceS, Letter, LetterS, Legal, Ledger, Exective, ExectiveS, 16K, 16KS, 8K |
| Custom size paper | • Max.: Width $320 \mathrm{~mm} \times$ Length 457.2 mm (Width $125 / 8$ inches $\times$ Length 18 inches) <br>  |

(2) Sub tray
(a) Paper capacity

| Paper type | Basis weight | Maximum capacity |
| :--- | :--- | :--- |
| Thin paper | 52 to $90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16$ to $2315 / 16 \mathrm{lb})$ | 200 sheets |
| Plain paper |  |  |
| Recycled paper | 91 to $300 \mathrm{~g} / \mathrm{m}^{2}(243 / 16$ to $7913 / 16 \mathrm{lb})$ | 20 sheets |
| Thick paper | - |  |
| Postcard | - |  |

| Paper type | Basis weight | Maximum capacity |
| :--- | :--- | :--- |
| OHP film | - |  |
| Label sheet | - |  |
| Letterhead | - |  |
| Tab paper | - |  |

(b) Paper size

| Type |  |
| :--- | :--- |
| Regular size paper | A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3 wide, Postcard S <br> Invoice, InvoiceS, Letter, LetterS, Legal, Ledger, Exective, ExectiveS, 16K, 16KS, 8K |
| Custom size paper | • Max.: Width $320 \mathrm{~mm} \times$ Length $1,200 \mathrm{~mm}$ (Width $125 / 8$ inches $\times$ Length $471 / 4$ inches) <br>  <br> • Min.: Width $90 \mathrm{~mm} \times$ Length 139.7 mm (Width $39 / 16$ inches $\times$ Length $51 / 2$ inches) |

### 16.3.2 Sort offset/group offset

## (1) Main tray

NOTE

- If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
(a) Number of stacked sheets

| Paper type | Basis weight | Maximum number of stacked sheets |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | less than B5 | A4/A4S/Letter/LetterS/B5 | B4/B5S/Legal or greater |
| Thin paper | $\begin{aligned} & 52 \text { to } 90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \text { to } \\ & 2315 / 16 \mathrm{lb}) \end{aligned}$ | 500 sheets | - 3,000 sheets (FS-536) <br> - 2,000 sheets (FS-536SD) | 1,500 sheets |
| Plain paper |  |  |  |  |
| Recycled paper |  |  |  |  |
| Thick paper | $\begin{aligned} & 91 \text { to } 300 \mathrm{~g} / \mathrm{m}^{2}(243 / 16 \text { to } \\ & 7913 / 16 \mathrm{lb}) \end{aligned}$ | 20 sheets |  |  |

(b) Height of stacked sheets

| Paper length | Maximum height of stacked sheets |
| :--- | :--- |
| A4S/LetterS or less | $375 \mathrm{~mm}(143 / 4$ inches $)($ FS-536 $), 250 \mathrm{~mm} \mathrm{(9} \mathrm{13/16} \mathrm{inches)} \mathrm{(FS-536SD)}$ |
| B4/Legal or greater | $187.5 \mathrm{~mm}(73 / 8$ inches) |

(c) Paper size

| Type |  |
| :--- | :--- |
| Regular size paper | A5, B5S, B5, A4S, A4, B4, A3, SRA3, A3 Wide <br> Letter, LetterS, Legal, Ledger, Exective, ExecticeS, 16KS, 16K, 8K |
| Custom size paper | - Max.: Width $320 \mathrm{~mm} \times$ Length 457.2 mm (Width $125 / 8$ inches $\times$ Length 18 inches) <br> $\quad$ Min.: Width $182 \mathrm{~mm} \times$ Length 148.5 mm (Width $7 / 16$ inches $\times$ Length $57 / 8$ inches) |

### 16.3.3 Sort staple

## (1) Main tray

(a) Paper capacity

| Paper type | Basis weight | No. of sheets to be stapled | Max. capacity (Number of stacked sheets/Height of stacked sheets) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | A4/B5/Letter | A4S/LetterS or less | B4/Legal or greater |
| - Thin | 52 to $90 \mathrm{~g} / \mathrm{m}^{2}$ (13 | 2 sheets to 9 sheets | 200 sets * | 100 sets |  |
| paper | 13/16 to 23 15/16 | 10 sheets to 20 sheets | 50 sets |  |  |
| paper |  | 21 sheets to 30 sheets | 30 sets |  |  |
| - Recycle |  | 31 sheets to 40 sheets | 25 sets |  |  |
| d paper |  | 41 to 50 sheets | 20 sets |  |  |

- *: 100 sets for thin paper or recycled paper

## (b) Paper size

| Type |  |
| :--- | :--- |
| Regular size paper | A5, B5S, B5, A4S, A4, B4, A3 <br> LetterS, Letter, Legal, Ledger, ExectiveS, Exective, 16KS, 16K, 8K |
| Custom size paper | • Max.: Width $297 \mathrm{~mm} \times$ Length 431.8 mm (Width $1111 / 16$ inches $\times$ Length 17 inches) <br> $\quad$ Min.: Width $182 \mathrm{~mm} \times$ Length 148.5 mm (Width $7 / 16$ inches $\times$ Length $57 / 8$ inches) |

(c) No. of sheets to be stapled

| Mode | Max. No. of sheets to be stapled |
| :--- | :--- |
| Normal mode *1 | Thin paper / Plain paper / Recycled paper: 50 sheets *2 |

| Mode | Max. No. of sheets to be stapled |
| :---: | :---: |
|  | Thick paper (91 to $120 \mathrm{~g} / \mathrm{m} 2$ (24 3/16 to $3115 / 16 \mathrm{lb})$ ): 30 sheets *2 |
|  | Thick paper ( 121 to $209 \mathrm{~g} / \mathrm{m} 2$ ( $323 / 16$ to $555 / 8 \mathrm{lb}$ )): 15 sheets *2 |
| Cover sheet mode | 48 sheets ( $\left.75 \mathrm{~g} / \mathrm{m}^{2}(1915 / 16 \mathrm{lb}), 80 \mathrm{~g} / \mathrm{m}^{2}(211 / 4 \mathrm{lb}), 90 \mathrm{~g} / \mathrm{m}^{2}(2315 / 16 \mathrm{lb})\right)+2$ sheets ( $163 \mathrm{~g} / \mathrm{m}^{2}(433 / 8$ lb), $200 \mathrm{~g} / \mathrm{m}^{2}(533 / 16 \mathrm{lb})$ ) |

- *1: Maximum stapling sheets/ sets for printing high image density is $20 \times 20$ sets.
- *2: For an original including different size of paper, the number of sheets to be stapled indicates the maximum number of sheets of the stapled largest paper.
(d) Stapling position

| Stapling position |  |
| :--- | :--- |
| Back/Front of the corner (45 <br> degree) | A4, A3, B5, B4, Letter, Ledger |
| Back of the corner (Parallel) | A4, A3, Letter, Ledger |
| Back/Front of the corner <br> (Parallel) | A4S, 5S, A5, LetterS, Legal |
| Side: Parallel 2 point | A4S, A4, A3, B5S, B5, B4, A5, LetterS, Letter, Legal, Ledger |

### 16.3.4 Center staple/folding

| Supported paper in center staple /folding | - Thin paper ( $52 \mathrm{~g} / \mathrm{m} 2$ to $59 \mathrm{~g} / \mathrm{m} 2(1313 / 16 \mathrm{lb}$ to $1511 / 16 \mathrm{lb})$ ) <br> - Plain paper ( $60 \mathrm{~g} / \mathrm{m} 2$ to $90 \mathrm{~g} / \mathrm{m} 2(1515 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ ) <br> - Thick $1(91 \mathrm{~g} / \mathrm{m} 2$ to $120 \mathrm{~g} / \mathrm{m} 2(243 / 16 \mathrm{lb}$ to $3115 / 16 \mathrm{lb}))$ *1, *2 <br> - Thick $1+(121 \mathrm{~g} / \mathrm{m} 2$ to $157 \mathrm{~g} / \mathrm{m} 2(323 / 16 \mathrm{lb}$ to $413 / 4 \mathrm{lb})){ }^{*} 1$, *2 <br> - Thick $2(158 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2(42 \mathrm{lb}$ to $555 / 8 \mathrm{lb})$ ) *1, *2 |
| :---: | :---: |
| Supported paper sizes | A4S, B4, A3, A3 wide, LetterS, Legal, Ledger, 8K, Custom size paper (Width: 210 mm to 320 mm (8 $1 / 4 \mathrm{lb}$ to $125 / 8 \mathrm{lb})$, length: 279.4 mm to $457.2 \mathrm{~mm}(11 \mathrm{lb}$ to 18 lb$)$ ) |
| Supported mode and basis weight | Normal mode: $52 \mathrm{~g} / \mathrm{m} 2$ to $90 \mathrm{~g} / \mathrm{m} 2(1313 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ |
|  | Cover mode: $52 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2(1313 / 16 \mathrm{lb}$ to $555 / 8 \mathrm{lb}) * 3$ |
|  | Thick paper mode: $91 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2(243 / 16 \mathrm{lb}$ to $555 / 8 \mathrm{lb})$ |
| Number of sheets stacked on the saddle tray | 1 sheet to 3 sheets: 20 sets |
|  | 4 sheets to 10 sheets: 10 sets |
|  | 11 sheets to 20 sheets: 5 sets |
| Number of center staple sheets | Normal mode: 2 sheets to 20 sheets (maximum 80 pages) |
|  | Cover mode: 2 sheets to 20 sheets (maximum 80 pages) *4 |
| Number of folding sheets | Normal mode: 5 sheets |
|  | Thick paper mode: 1 sheet |

- *1: For center staple, available only with 1 cover sheet of cover mode
- *2: For folding, available only with 1 cover sheet
- *3: Use only 1 sheet as a cover sheet for cover mode
- *4: Cover sheet: 1 sheet ( $52 \mathrm{~g} / \mathrm{m} 2$ to $209 \mathrm{~g} / \mathrm{m} 2(1313 / 16 \mathrm{lb}$ to $555 / 8 \mathrm{lb})$ ) + body page: 19 sheets $(52 \mathrm{~g} / \mathrm{m} 2 \mathrm{to} 90 \mathrm{~g} / \mathrm{m} 2(13 \mathrm{13} / 16 \mathrm{lb}$ to 23 15/16 lb))

### 16.3.5 Tri-folding

| Supported paper in tri-folding | Thin paper $(52 \mathrm{~g} / \mathrm{m} 2$ to $59 \mathrm{~g} / \mathrm{m} 2(1313 / 16 \mathrm{lb}$ to $1511 / 16 \mathrm{lb}))$ <br> Plain paper $(60 \mathrm{~g} / \mathrm{m} 2$ to $90 \mathrm{~g} / \mathrm{m} 2(1515 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb}))$ |  |
| :--- | :--- | :--- |
| Supported paper sizes | A4S, LetterS, 16 KS |  |
| Number of tri-folding sheets and sets * | 1 sheet folding | 30 sets |
|  | 2 sheets folding | 10 sets |
|  | 3 sheets folding |  |

- *: Up to 3 sheets in tri-folding

### 16.4 Machine specification

| Power requirement | DC $24 \mathrm{~V} \pm 10 \%$ (supplied from the main body) |
| :---: | :---: |
| Power consumption | 105 W or less |
| Dimension | $528 \mathrm{~mm}(\mathrm{~W}) \times 635 \mathrm{~mm}(\mathrm{D}) \times 1,023 \mathrm{~mm}(\mathrm{H})(2013 / 16$ inches (W) $\times 25$ inches (D) $\times 401 / 4$ inches (H)) |
|  | $658 \mathrm{~mm}(\mathrm{~W}) \times 635 \mathrm{~mm}(\mathrm{D}) \times 1,065 \mathrm{~mm}(\mathrm{H})(257 / 8$ inches (W) $\times 25$ inches (D) $\times 41$ 15/16 inches (H)) *1 |
| Weight | FS-536: $36 \mathrm{~kg}(79$ 3/8 lb)/FS-536SD: $60 \mathrm{~kg}(1321 / 4 \mathrm{lb})$ |

[^4]
### 16.5 Operating environment

- Conforms to the operating environment of the main body.

17. PK-520

### 17.1 Type

| Name | Punch kit |
| :--- | :--- |
| Type | FS-integrated type punching operation device |

### 17.2 Functions

| Punching method | Stops and punches every paper |
| :--- | :--- |
| No. of holes | • Japan: 2 holes <br> • North America: 2-3 holes switching <br> • Europe: 2-4 holes switching |
|  | •Sweden: 4 holes |
| Supported mode | Punch mode |
| Applicable post processing mode | Sort, Group, Staple |

### 17.3 Paper

| Size | - B5S, B5, A4S, A4, B4, A3 <br> - Letter S, Letter, Legal, Ledger, Exective S, Exective <br> - 16KS, 16K, 8K |
| :---: | :---: |
| Supported paper | Conforms to the operating environment of the main body. <br> - Thin paper ( $52 \mathrm{~g} / \mathrm{m}^{2}$ to $59 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \mathrm{lb}$ to $1511 / 16 \mathrm{lb})$ ) <br> - Plain paper $\left(60 \mathrm{~g} / \mathrm{m}^{2}\right.$ to $90 \mathrm{~g} / \mathrm{m}^{2}(1515 / 16 \mathrm{lb}$ to $\left.2315 / 16 \mathrm{lb})\right)$ <br> - Thick $1\left(91 \mathrm{~g} / \mathrm{m}^{2}\right.$ to $120 \mathrm{~g} / \mathrm{m}^{2}(243 / 16 \mathrm{lb}$ to $\left.3115 / 16 \mathrm{lb})\right)$ <br> - Thick $1+\left(121 \mathrm{~g} / \mathrm{m}^{2}\right.$ to $157 \mathrm{~g} / \mathrm{m}^{2}(323 / 16 \mathrm{lb}$ to $\left.413 / 4 \mathrm{lb})\right)$ <br> - Thick $2\left(158 \mathrm{~g} / \mathrm{m}^{2}\right.$ to $209 \mathrm{~g} / \mathrm{m}^{2}(42 \mathrm{lb}$ to $\left.555 / 8 \mathrm{lb})\right)$ <br> - Thick $3\left(210 \mathrm{~g} / \mathrm{m}^{2}\right.$ to $256 \mathrm{~g} / \mathrm{m}^{2}(557 / 8 \mathrm{lb}$ to $\left.681 / 8 \mathrm{lb})\right)$ <br> - Thick $4\left(257 \mathrm{~g} / \mathrm{m}^{2}\right.$ to $300 \mathrm{~g} / \mathrm{m}^{2}(683 / 8 \mathrm{lb}$ to $7913 / 16 \mathrm{lb})$ ) |
| Punch prohibited paper | - Label paper, Tab paper, OHP film, Translucent paper, Holed paper <br> - Other paper that may interfere with the operation of the punch kit or the punch blade |

### 17.4 Machine specification

| Power requirement | DC 24 V (supplied from the finisher) |
| :--- | :--- |
|  | DC 5 V (supplied from the finisher) |
| Max. power consumption | Included in the max. power consumption of finisher |
| Dimension | $61 \mathrm{~mm}(\mathrm{~W}) \times 492 \mathrm{~mm}(\mathrm{D}) \times 142 \mathrm{~mm}(\mathrm{H})(23 / 8$ inches $(\mathrm{W}) \times 193 / 8$ inches (D) $\times 59 / 16 \mathrm{inches}(\mathrm{H}))$ |
| Weight | Approx. $1.8 \mathrm{~kg} \mathrm{(315/16lb)}$ |

### 17.5 Operating environment

- Conforms to the operating environment of the main body.

18. FS-537/FS-537SD

### 18.1 Type

| Name | Multi staple finisher (FS-537) <br> Finisher-contained center-staple and tri-fold device (FS-537SD) |
| :--- | :--- |
| Type | Freestanding |
| Document alignment | Center |
| Stapling function | Center 2-point stapling method by fixed stapler (FS-537SD) |
| Consumable | Staples (5,000 staples / cartridge) |

### 18.2 Function

| Mode | • Non sort |
| :--- | :--- |
|  | •Sort |
|  | •Sort offset |
|  | • Group offset |
|  | •Sort staple |
|  | - Center staple (FS-537SD) |
|  | - Center fold (FS-537SD) |
|  | - Tri-folding (FS-537SD) |

### 18.3 Staple

| Exit tray | Main tray |  |  |
| :---: | :---: | :---: | :---: |
| Supported paper sizes in stapling | A5, B5S/B5, B6S, A4S/A4, B4, A3 <br> LetterS/Letter, Legal, Ledger, ExectiveS/Exective, 16KS/16K, 8K Custom size paper (Width: 182.0 mm to 297 mm ( 7 3/16 inches to $1111 / 16$ inches), Length: 148.5 mm to 431.8 mm ( $57 / 8$ inches to 17 inches)) |  |  |
| Number of sheets stapled by paper type and size | Defined condition |  | No. of sheets to be stapled |
|  | Paper type | Paper size |  |
|  | Plain paper / Thin | A4, Legal | 100 sheets *1, *2 |
|  | paper / Recycled paper | B4, Ledger <br> FD: 298 to 389 mm (11 47/64 to 15 5/16 inches) | 65 sheets *1, *2 |
|  |  | A3, A5, Ledger FD: 150 mm or less, 390 mm or greater (5 7/8 inches or less, 15 3/8 inches or greater) | 50 sheets *1, *2 |
|  | 81 to $90 \mathrm{~g} / \mathrm{m}^{2}(21 \mathrm{~g} / 16$ lb to 23 15/16 lb) | - | 30 sheets *1, *2 |
|  | Cover sheet mode (max | ximum) | 98 sheets $\left(75 \mathrm{~g} / \mathrm{m}^{2}(1915 / 16 \mathrm{lb})\right.$ : Plain paper) +2 sheets ( $163 \mathrm{~g} / \mathrm{m}^{2}$ (43 3/8 lb)) |
| Staple positions | Front/back of the corner (45 degrees) | A4, A3, B4, B5, Letter, Ledger |  |
|  | Front/back of the corner (parallel) | A4S, B5S, A5, LetterS, Legal |  |
|  | Center staple two points | A4S/A4, A3, B5S/B5, B4, A5, LetterS/Letter, L | gal, Ledger |

- *1: For an original including different size of paper, the number of sheets to be stapled indicates the maximum number of sheets of the stapled largest paper.
- *2: The number of sheets can be stapled in a booklet including Z-folded pages is shown below.
- $\mathrm{X}+10 \mathrm{Z} \leqq$ number of sheets can be stapled (A4: 100 sheets)
- X: Paper not Z-folded
- Z: Z-folded paper
- Example) Paper not Z-folded: 40 sheets / Z-folded paper: 5 sheets
- $40+10 \times 5=\leqq 100$ sheets (number of sheets can be stapled) $->$ Can be stapled

### 18.4 Capacity

| Exit tray | Mode | Paper type |  | Paper size | Number of stacked sheets |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sub tray *1 | Normal ejection | Plain paper, recycled paper, thin paper (52 to $90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ ) |  | - | 200 sheets |
|  |  | Special paper | Postcard |  | 20 sheets |
|  |  |  | Envelope |  |  |
|  |  |  | OHP film |  |  |
|  |  |  | Label sheet |  |  |
|  |  | Thick paper ( 91 to $300 \mathrm{~g} / \mathrm{m}^{2}$ (24 3/16 to 79 13/16 lb)) |  |  |  |

| Exit tray | Mode | Paper type |  | Paper size | Number of stacked sheets |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Main tray *2 | Sort, group | Plain paper, recycled paper, thin paper (52 to $90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ ) |  | A4S/LetterS or less *2 B5/B5S or greater | FS-537: 3000 sheets/ FS-537SD: 2500 sheets |
|  |  |  |  | B4/Legal or greater | 1500 sheets *3 |
|  |  |  |  | A5S/Invoice or less | 500 sheets |
|  |  | Thick paper (91 to $300 \mathrm{~g} / \mathrm{m}^{2}$ (24 3/16 to 79 13/16 lb)) |  | - | 20 sheets |
|  | Sort offset, group offset | Plain paper, recycled paper, thin paper (52 to $90 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ ) |  | A/4A4S/B5/Letter/ Letters | FS-537: 3000 sheets/ FS-537SD: 2500 sheets |
|  |  |  |  | B4/B5S/ Legal or greater | 1500 sheets *3 |
|  |  |  |  | less than B5 | 500 sheets |
|  |  | Thick paper ( 91 to $300 \mathrm{~g} / \mathrm{m}^{2}$ (24 3/16 to 79 13/16 lb)) |  | - | 20 sheets |
|  | Staple | Paper type | Number of sheets stapled | Paper size | Number of sets stacked |
|  |  | Plain paper, Recycled paper (60 to $90 \mathrm{~g} / \mathrm{m}^{2}(1515 / 16$ lb to $2315 / 16 \mathrm{lb})$ ) <br> Thin paper (52 to 59 $\mathrm{g} / \mathrm{m}^{2}$ (13 13/16 to 15 11/16 lb)) | 2 to 9 sheets | A4/B5/Letter | 200 sets |
|  |  |  |  | A4S/LetterS or less | 100 sets |
|  |  |  |  | B4/ Legal or greater | 100 sets *3 |
|  |  |  | 10 to 20 sheets | - | 50 sets |
|  |  |  | 21 to 30 sheets |  | 30 sets |
|  |  |  | 31 to 40 sheets |  | 25 sets |
|  |  |  | 41 to 50 sheets |  | 20 sets |
|  |  |  | 51 to 60 sheets |  | 15 sets |
|  |  |  | 61 to 100 sheets |  | 10 sets |

- *1: 35 mm (1 3/8 inches) in stack height
- *2: 375 mm (143/4 inches) in stack height (A4S, LetterS, or smaller sizes)(FS-537), 250 mm (913/16 inches) in stack height (A4S, LetterS, or smaller sizes)(FS-537SD)
- *3: Protection used depending on the stacked number for B4 or larger sizes.

### 18.5 Center Fold

| Supported paper in center folding | Thin paper (52 to $59 \mathrm{~g} / \mathrm{m}^{2}$ (13 13/16 to 15 11/16 lb )) Plain paper ( 60 to $90 \mathrm{~g} / \mathrm{m}^{2}(1515 / 16 \mathrm{lb}$ to $2315 / 16 \mathrm{lb})$ ) Thick 1 ( 91 to $120 \mathrm{~g} / \mathrm{m}^{2}(243 / 16$ to $3115 / 16 \mathrm{lb})$ ) *1 Thick $1+\left(121\right.$ to $157 \mathrm{~g} / \mathrm{m}^{2}(323 / 16$ to $\left.413 / 4 \mathrm{lb})\right){ }^{*} 1$ Thick 2 (158 to $209 \mathrm{~g} / \mathrm{m}^{2}$ ( 42 to $555 / 8 \mathrm{lb}$ )) *1 |  |
| :---: | :---: | :---: |
| Supported paper sizes | A4S, B4, A3, A3 wide ( $12 \frac{1}{4} \times 18$ ), SRA3, LetterS, Legal, Ledger, 8 K Custom size paper (Width: 210 mm to 320 mm ( $81 / 4$ inches to $125 / 8$ inches), Length: 279.4 mm to 457.2 mm (11 inches $\times 18$ inches)) |  |
| Number of sets stacked on the exit tray by paper type and size | 1 to 5 sheets folding *2 | All sizes of supported paper: 35 sets (except thick paper) |

- *1: Available only with 1 sheet
- *2: Up to 5 sheets in center folding

### 18.6 Tri-folding

| Supported paper in tri-folding | Thin paper $\left(52\right.$ to $59 \mathrm{~g} / \mathrm{m}^{2}(1313 / 16$ to $\left.1511 / 16 \mathrm{lb})\right)$ <br> Plain paper $\left(60\right.$ to $90 \mathrm{~g} / \mathrm{m}^{2}(1515 / 16$ to $\left.2315 / 16 \mathrm{lb})\right)$ |  |
| :--- | :--- | :--- |
| Supported paper sizes | A4S, LetterS, 16 KS |  |
| Number of sets stacked on the exit tray by <br> paper type and size * | 1 sheet folding | 50 sets |
|  | 2 sheets folding | 40 sets |
|  | 3 sheets folding | 30 sets |

- *: Up to 3 sheets in tri-folding
18.7 Machine specification

| Power requirement | DC $24 \mathrm{~V} \pm 10 \%$ (supplied from the main body) |
| :---: | :---: |
|  | DC $5 \mathrm{~V} \pm 3$ \%, $3.3 \mathrm{~V} \pm 3$ \% (generated inside FS-537) |
| Power consumption | 140 W or less (95 ppm), 110 W or less ( 75 ppm ) |
| Dimension | FS-537: $622 \mathrm{~mm} /$ FS-537SD: $635 \mathrm{~mm}(\mathrm{~W}) \times 692 \mathrm{~mm}(\mathrm{D}) \times 1,031 \mathrm{~mm}(\mathrm{H})$ (FS-537:24 1/2 inches / FS-537SD: 25 inches (W) $271 / 4$ inches (D) $409 / 16$ inches (H)) |
|  | FS-537: $752 \mathrm{~mm} /$ FS-537SD: $776 \mathrm{~mm}(\mathrm{~W}) \times 692 \mathrm{~mm}(\mathrm{D}) \times 1,077 \mathrm{~mm}(\mathrm{H})$ <br> (FS-537: 29 39/64 inches / FS-537SD: $309 / 16$ inches (W) $\times 271 / 4$ inches (D) $\times 423 / 8$ inches (H)) * |
| Weight | FS-537: 47 kg (103 5/8 lb)/FS-537SD: 73 kg (160 15/16 lb) |

[^5]
### 18.8 Operating environment

- Conforms to the operating environment of the main body.

19. PK-523
19.1 Type

| Name | PK-523 |
| :--- | :--- |
| Type | Finisher-contained hole punch device with auto paper alignment mechanism |

### 19.2 Function

| Punching method | Slide cam method by DC brush motor |
| :--- | :--- |
| No. of holes | $2-3$ holes, $2-4$ holes, Sweden 4 holes |
| Hole diameter | 2 holes $/ \varphi 8.0 \mathrm{~mm}-3$ holes $/ \varphi 8.0 \mathrm{~mm}, 2$ holes $/ \varphi 6.5 \mathrm{~mm}-4$ holes $/ \varphi 6.5 \mathrm{~mm}, 4 \mathrm{holes} / \varphi 6.5 \mathrm{~mm}$ |
| Hole pitch | 2 holes $/ 70 \mathrm{~mm}$ pitch -3 holes $/ 108 \mathrm{~mm}$ pitch, 2 holes $/ 80 \mathrm{~mm}$ pitch -4 holes $/ 80 \mathrm{~mm}$ pitch, 4 <br> holes $/ 70 \mathrm{~mm}, 21 \mathrm{~mm}$ pitch |
| Supported mode | Punch mode, through mode |
| Applicable post processing mode | Sort, Group, Staple |

### 19.3 Paper

| Size | A5/A5S, B5/B5S, A4/A4S, B4, A3 <br> Letter/LetterS, Legal, Ledger, Invoice/InvoiceS, Exective/ExectiveS, 16K/16KS, 8K, Foolscap, F4 |
| :---: | :---: |
| Supported paper | Plain paper (60 to $90 \mathrm{~g} / \mathrm{m}^{2}$ (15 15/16 to $\left.2315 / 16 \mathrm{lb}\right)$ ), Thin paper ( 52 to $59 \mathrm{~g} / \mathrm{m}^{2}$ ( $1313 / 16$ to 15 $11 / 16 \mathrm{lb})$ ), Thick 1 ( 91 to $120 \mathrm{~g} / \mathrm{m}^{2}(243 / 16$ to $3115 / 16 \mathrm{lb})$ ), Thick $1+\left(121\right.$ to $157 \mathrm{~g} / \mathrm{m}^{2}(323 / 16$ to $413 / 4 \mathrm{lb})$ ), Thick $2\left(158\right.$ to $209 \mathrm{~g} / \mathrm{m}^{2}(42$ to $555 / 8 \mathrm{lb})$ ), Thick $3\left(210\right.$ to $256 \mathrm{~g} / \mathrm{m}^{2}(557 / 8$ to $681 / 8$ lb)), Thick 4 ( 257 to $300 \mathrm{~g} / \mathrm{m}^{2}$ (68 3/8 to $\left.7913 / 16 \mathrm{lb}\right)$ ) |
| Basis weight | 52 to $300 \mathrm{~g} / \mathrm{m}^{2}$ (13 13/16 to $7913 / 16 \mathrm{lb}$ ) |
| Punch prohibited paper | Long size paper, post card ( $190 \mathrm{~g} / \mathrm{m}^{2}(509 / 16 \mathrm{lb})$ ), envelope, OHP film, label sheet, letter head, index paper, and the other paper that may interfere with the operation of the punch unit or the punch blade |

### 19.4 Machine specification

| Power requirement | DC $24 \mathrm{~V} \pm 10 \%$ (supplied from the FS-537) |
| :--- | :--- |
|  | DC $5.1 \mathrm{~V} \pm 3 \%$ (supplied from the FS-537) |
| Max. power consumption | 17 W or less |
| Dimension | $146.2 \mathrm{~mm}(\mathrm{~W}) \times 639.2 \mathrm{~mm}(\mathrm{D}) \times 233.8 \mathrm{~mm}(\mathrm{H})(53 / 4$ inch $(\mathrm{W}) \times 253 / 16$ inch (D) $\times 93 / 16$ inch (H)) |
| Weight | $4.5 \mathrm{~kg}(915 / 16 \mathrm{lb})$ |

### 19.5 Operating environment

- Conforms to the operating environment of the main body.

20. ZU-609

### 20.1 Type

| Name | Z folding unit |
| :--- | :--- |
| Type | Finisher-contained |
| Document alignment | Center |

### 20.2 Function

| Mode | - Through (no folding) <br>  <br>  <br>  <br>  <br>  <br>  <br>  <br>  <br>  <br> • Z-fouble-folding <br> • Double-folding |
| :--- | :--- |

### 20.3 Paper process ability

### 20.3.1 Paper size

| Type |  |
| :--- | :--- |
| Regular size paper | A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3 wide, Postcard S <br> Invoice, InvoiceS, Letter, LetterS, Legal, Ledger, Exective, ExectiveS, 16K, 16KS, 8K |
| Custom size paper | • Max.: Width $320 \mathrm{~mm} \times$ Length 1200 mm (Width $125 / 8$ inches $\times$ Length 47 $1 / 4$ inches) <br> $\quad$ Min.: Width $90 \mathrm{~mm} \times$ Length 139.7 mm (Width $39 / 16$ inches $\times$ Length $51 / 2$ inches) |

### 20.3.2 Number of sets stacked of the Z-folding

| Number of sheets being Z-folded per one <br> job | Number of sheets without being Z-folded: Number of sets stacked in main tray * |
| :---: | :---: |
| 1 sheet | 1 to 40 sheets: 20 sets $/ 41$ to 90 sheets: 10 sets |
| 2 sheets | 1 to 80 sheets: 10 sets |
| 3 sheets | 1 to 70 sheets: 4 sets |
| 4 sheets | 1 to 60 sheets: 3 sets |
| 5 sheets | 1 to 50 sheets: 2 sets |
| 6 to 10 sheets | No dropping |

- *: Paper size (52 to $90 \mathrm{~g} / \mathrm{m}^{2}$ (13 13/16 to $\left.2315 / 16 \mathrm{lb}\right)$ ) B4, A3, Legal, Ledger, 8 K

### 20.3.3 Number of stacked sheets of double-folding

| Number of sheets being double-folded <br> per one job | Number of sheets without being double-folded: Number of sets stacked in main tray * |
| :---: | :---: |
| 1 sheet | 1 to 40 sheets: 20 sets $/ 41$ to 90 sheets:10 sets |
| 2 sheets | 1 to 80 sheets: 10 sets |
| 3 sheets | 1 to 70 sheets: 4 sets |
| 4 sheets | 1 to 60 sheets: 3 sets |
| 5 sheets | 1 to 50 sheets: 2 sets |
| 6 to 10 sheets | No dropping |

- *: Paper size (52 to $90 \mathrm{~g} / \mathrm{m}^{2}$ (13 13/16 to 23 15/16 lb)) Legal

### 20.4 Machine specification

| Power requirement | DC $24 \mathrm{~V} \pm 10 \%$ (supplied from the finisher) <br> DC $5 \mathrm{~V} \pm 3 \%$ (supplied from the finisher) |
| :--- | :--- |
| Power consumption | Regulated on finisher system |
| Dimension | $101 \mathrm{~mm}(\mathrm{~W}) \times 506 \mathrm{~mm}(\mathrm{D}) \times 186 \mathrm{~mm}(\mathrm{H})(3$ inches $(\mathrm{W}) \times 1915 / 16$ inches (D) $\times 75 / 16 \mathrm{inches}(\mathrm{H}))$ |
| Weight | Approx. $4.5 \mathrm{~kg}(915 / 16 \mathrm{lb})$ |

### 20.5 Operating environment

- Conforms to the operating environment of the main body.

21. JS-602

### 21.1 Type

| Name | Job Separator |
| :--- | :--- |
| Type | Add-on finishing device externally mounted on top of finisher |
| Installation | Fixed to finisher |
| Document alignment | Center |

### 21.2 Function

Mode

## Group, Sort (during copy, print, or fax mode)

### 21.3 Paper

| Type | Size | Basis weight |  | Maximum capacity |
| :---: | :---: | :---: | :---: | :---: |
| Plain paper | $\begin{aligned} & \text { A3, B4, A4/A4S, B5/B5S, } \\ & \text { A5S } \end{aligned}$ | 60 to $90 \mathrm{~g} / \mathrm{m}^{2}$ (15 15/16 to 23 15/16 lb) | 100 sheets | A4, $81 / 2 \times 11\left(80 \mathrm{~g} / \mathrm{m}^{2}(211 / 4 \mathrm{lb})\right.$ ) |
|  |  |  | 50 sheets | Except A4, $81 / 2 \times 11\left(80 \mathrm{~g} / \mathrm{m}^{2}(211 / 4 \mathrm{lb})\right)$ (Height: up to 28 mm (1 $1 / 8$ inches)) |

### 21.4 Machine specification

| Power requirement | DC 24 V (supplied from the finisher) |
| :--- | :--- |
|  | DC 5 V (supplied from the finisher) |
| Dimension | $341 \mathrm{~mm} \mathrm{(W)} \times 537 \mathrm{~mm}(\mathrm{D}) \times 149 \mathrm{~mm}(\mathrm{H})(137 / 16$ inches $(\mathrm{W}) \times 211 / 8$ inches (D) $\times 57 / 8 \mathrm{inches}$ <br> $(H))$ |
| Weight | $1.75 \mathrm{~kg} \mathrm{(9} \mathrm{15/16} \mathrm{lb)}$ |

### 21.5 Operating environment

- Conforms to the operating environment of the main body.

## 22. PI-507

### 22.1 Type

| Name | Post inserter unit |
| :--- | :--- |
| Type | External type finisher |

### 22.2 Function

| Auto sheet feeding (online operation) | Feeds the sheet to finisher automatically under the instruction from the main body. |
| :---: | :---: |
| Manual sheet feeding (offline operation) | Feeds the sheet to finisher under the instruction from the operation panel of PI. |
|  | You can select the following processing modes. |
|  | - Staple mode <br> - Punch mode (when PK-523 is installed on finisher) <br> - Center staple mode (FS-537SD) <br> - Double-folding mode (FS-537SD) |

### 22.3 Paper

| Size | Tray /Up | - A4/A4S, B5/B5S, A5 <br> - Incoice/InvoiceS, Lettter/LetterS, Exective/ Exective S, 16K/16KS <br> - Custom paper (Max. $320 \times 297 \mathrm{~mm}(125 / 8 \times 11$ 11/16 inches), Min. 182 x 139 mm (73/16 x 5 1/2 inches)) |
| :---: | :---: | :---: |
|  | Tray /Lw | - A3, B4, A4/A4S, B5/B5S, A5, SRA3, A3 wide <br> - Incoice/InvoiceS, Letter/LetterS, Exective/Exective S, Legal, Leger, 16K/16KS, 8K <br> - Custom paper (Max. $320 \times 457.2 \mathrm{~mm}$ ( $125 / 8 \times 18$ inches), Min. $182 \times$ 139 mm ( $73 / 16 \times 51 / 2$ inches)) |
| Paper type | Plain paper, Thick paper (91 to $209 \mathrm{~g} / \mathrm{m}^{2}$ (24 3/16 to $559 / 16 \mathrm{lb}$ )), label paper |  |
| Basis weight | $60 \mathrm{~g} / \mathrm{m}^{2}$ to $209 \mathrm{~g} / \mathrm{m}^{2}(1515 / 16 \mathrm{lb}$ to $559 / 16 \mathrm{lb})$ |  |
| Capacity | Tray /Up | 200 sheets (80 g/m² (12 1/4 lb)) or 30 mm ( $13 / 16$ inches) or less in height |
|  | Tray /Lw | 200 sheets (80 g/m² (12 1/4 lb)) or 30 mm ( $13 / 16$ inches) or less in height |

### 22.4 Machine specification

| Power requirement | DC $24 \mathrm{~V} \pm 10 \%$ (supplied from the finisher) |
| :--- | :--- |
| Max. power consumption | Regulated on finisher system |
| Dimension | $513 \mathrm{~mm}(\mathrm{~W}) \times 635 \mathrm{~mm}(\mathrm{D}) \times 222 \mathrm{~mm}(\mathrm{H})(203 / 16$ inches $(\mathrm{W}) \times 25$ inches (D) $\times 83 / 4 \mathrm{inches}(\mathrm{H}))$ |
| Weight | Approx. $12 \mathrm{~kg} \mathrm{(26} \mathrm{7/16} \mathrm{lb)}$ |

### 22.5 Operating environment

[^6]23. CU-101
23.1 Type

| Name | Clean unit |  |
| :--- | :--- | :--- |
| Type | Exhaust scrubber |  |
| Suction system | Dual inline fan + suction fan (MK-745) |  |
| Trapping system | UFP trap | UFP filter |
|  | Deodorant trap | Deodorant filter |
| UFP collection <br> efficiency | UFP filter collection capacity: More than $99 \%$ |  |
| Maximum suction <br> air volume | $0.8 \mathrm{~m}^{3} / \mathrm{min}$ (Avg. flow velocity: $0.1 \mathrm{~m} / \mathrm{sec}$ ) |  |
| Exhaust direction | Exhaust downflow |  |

### 23.2 Machine specification

| Power requirement | DC 24 V (supplied from the MFP main body) |
| :--- | :--- |
| Max. power consumption | 12 W or less (CU-101 + MK-745) |
| Dimension | $450 \mathrm{~mm}(\mathrm{~W}) \times 106 \mathrm{~mm}(\mathrm{D}) \times 320 \mathrm{~mm}(\mathrm{H})$ |
|  | $1711 / 16$ inches (W) $\times 43 / 16$ inches (D) $\times 125 / 8 \mathrm{inches}(\mathrm{H})$ |
| Weight | Approx. $2.0 \mathrm{~kg}(47 / 16 \mathrm{lb})$ |

### 23.3 Operating environment

- Conforms to the operating environment of the MFP main body.

### 23.4 Note for the Specifications

- These specifications are subject to change without notice.

24. CU-102
24.1 Type

| Name | Clean unit |
| :--- | :--- |
| Type | Exhaust scrubber |
| Suction system | Dual parallel fan |
| Trapping system | UFP trap $\quad$ UFP filter |
| UFP collection <br> efficiency | UFP filter collection capacity: More than $99 \%$ |
| Maximum suction <br> air volume | $1.2 \mathrm{~m}^{3} / \mathrm{min}$ (Avg. flow velocity: $0.1 \mathrm{~m} / \mathrm{sec}$ ) |
| Exhaust direction | Exhaust downflow |

### 24.2 Machine specification

| Power requirement | DC 24 V (supplied from the MFP main body) |
| :--- | :--- |
| Max. power consumption | 17 W or less |
| Dimension | $480 \mathrm{~mm}(\mathrm{~W}) \times 75 \mathrm{~mm}(\mathrm{D}) \times 314 \mathrm{~mm}(\mathrm{H})$ |
|  | $187 / 8$ inches $(\mathrm{W}) \times 31 / 16$ inches (D) $\times 123 / 8$ inches (H) |
| Weight | Approx. $2.0 \mathrm{~kg}(47 / 16 \mathrm{lb})$ |

### 24.3 Operating environment

- Conforms to the operating environment of the MFP main body.

### 24.4 Note for the Specifications

- These specifications are subject to change without notice.

## 25. FK-514/FK-515

### 25.1 Basic specifications

25.1.1 General specifications

| Applicable lines | PSTN, PBX |
| :---: | :---: |
| Protocol | Group 3 (compliant to ITU-T T.30) <br> - ECM <br> - F-code communication <br> - Konica Minolta non-standard protocol: No <br> - Group 4: No |
| Maximum data rate | 33,600 bps |
| Coding method | - MH <br> - MR <br> - MMR <br> - JBIG |
| Modulation method | - V.27ter <br> - V. 29 <br> - (V.33): V. 33 is for reception only. <br> - V. 17 <br> - V. 8 <br> - V34 |
| Communication resolution | Normal $8 \times 3.85$ lines / mm |
|  | Fine • $8 \times 7.7$ lines $/ \mathrm{mm}$ <br>  • $200 \times 200$ pixels $/$ inch |
|  | Super fine - $8 \times 15.4$ lines $/ \mathrm{mm}$ (Reception only) <br>  <br>  <br> • $16 \times 15.4$ lines $/ \mathrm{mm}$ <br> • $400 \times 400$ pixels $/$ inch |
|  | Ultra fine $600 \times 600$ pixels / inch |
|  | - Fixed to mm at transmission (except 600 dpi ) <br> - mm and inch are available at reception. <br> - Selection by using the [Resolution] key. <br> - You can not change settings on every page. |
| Fax memory size | - 128 GB ( 128 GB in the main body HDD 250 GB is used as a memory.) <br> - 10000 pages can be stored including all Scan/Box/Printer/Fax documents. |
| FAX memory backup | Image data is saved in HDD. |
| Multiple line connection | Four lines can be connected by installing four fax kit. (FK-514 $\times 2$ units and FK-515 $\times 2$ units) |
| Communication time | Level of 2 seconds (Konica Minolta standard A4 chart, 33,600 bps) |
| Resolution conversion | At sending: <br> - Scanner: inch <br> - Density conversion: inch -> mm <br> - Communication: mm / inch (600 dpi only) |
|  | At receiving (mm): <br> - Density conversion: mm -> inch <br> - Print: inch |
|  | At receiving (inch): <br> - Density conversion: inch -> inch <br> - Print: inch |

25.1.2 Scanning section

| Scanning method | Platen documents | Impossible to scan book documents (book mode) |
| :---: | :---: | :---: |
|  | DF book documents | - Scanning mode: 1-Sided, 2-Sided and cover + 2-Sided <br> - Possible to scan the DF mixed size documents. |
| Scanning resolution | Normal | $8 \times 3.85$ lines / mm |
|  | Fine | $8 \times 7.7$ lines / mm |
|  | Super fine | $16 \times 15.4$ lines / mm |
|  | Ultra Super fine | $600 \times 600$ dpi |
|  | - Selection by using the [Resolution] key. <br> - You can not change settings on each page. |  |
| Mixed original | Possible to mix documents of different sizes. <br> - After rotation of images, sizes are changed by EOM every time the length of the scan line is changed at sending. <br> - Possible to mix sizes (A and B). |  |
| Density selection | Selection by using the [Density] key. [Light] / [Standard] / [Dark] <br> - You can not change settings on each page. |  |
| Maximum scanning document width | 297 mm (A3 width) both for DF and Platen |  |
| Maximum scanning document length | Regular mode | - 431.8 mm <br> - 17 inches |

### 25.1.3 Recording section

| Recording | Laser electrostatic printing system |
| :---: | :---: |
| Recording paper size | - All sizes except for B6 and Postcard (See the copier basic specifications.) <br> - Auto recording paper selection <br> - Note: A5 and B5 paper is used only for A5 and B5 reception respectively |
| Recording paper cassette | - Tray 1 to Tray 4 <br> - Manual bypass tray <br> - LCT |
| Staple | No |
| Recording speed | Compliant to the copier standards |
| Recording size | A3 size maximum <br> - A3 fix as reception record ability declaration in protocol. |
| Maximum reception length | 1000 mm <br> - In case of being larger than the maximum reception length, a communication error occurs. <br> - When the memory over occurs during reception, the received data is printed. |
| Reduction record | When the received image information is larger than the recording paper, it is automatically reduced to the recording paper size and recorded. |
| Page separation record | Yes |
| Offset output at each communication | Yes (Job unit reception only) |
| Rotation reception | Yes <br> - Images are rotated by 90 degrees and recorded on the recording paper in LEF direction. |
| Two-sided reception | Yes (Utility Mode) |
| 2-in-1 reception | No |
| Smoothing | Yes (at converting the resolution) |
| Print/Fax output settings | Yes |
| Bypass print | Possible to use as an active tray in auto selection mode. |
| Total page counter | Yes |
| Monitor print | No (copy at sending) |

### 25.1.4 Line connecting section

| NCU type | A-A~, line control by silicon DAA |
| :--- | :--- |
| Connecting terminal | RJ11 |
| Modem | Matsushita MMD-5020 |
| Modem sending level | -10 to -15 dBm (Country spec) |
| DTMF sending level | -10 to -15 dBm (Country spec) |
| Receiving sensitivity | • G3 reception: up to -48 dB <br>  <br>  <br> Dialing signal |

### 25.1.5 Control panel section

| FAX / copy / scan / box | Mode switching | by panel key selection <br> • Possible to change modes during an operation of each mode. <br> - No mode return by the auto reset. |
| :--- | :--- | :--- |
|  | Initial screen after power- <br> on | Screen at power off or facsimile screen. <br> (depending on parameter setting) |

| Interruption during scanning | When pressing the interrupt key while scanning documents to be transmitted, INTERRUPT LED blinks. Copy screen appears after scanning is completed. |
| :---: | :---: |
| Interruption during recording in the FAX mode screen | Operations by using the interrupt key are invalid. |
| FAX start | by using the start key. |
| Stop | by using the stop key. <br> - Possible to appoint to stop from the job list so as to stop during operations of the multi jobs. |
| FAX free memory display | RDH memory <br> - \% indication on LCD during scanning, recording and stand-by. <br> File memory (RAM disk/HDD) <br> - Display in the JOB LIST screen |
| File existence indication | In the following cases, the data Indicator (LED) on the control panel lights up. <br> - Upon reception of FAX <br> - When a document is saved in the bulletin board box, polling TX box, and memory RX user box. |
| Display during the FAX communications | No display by LCD panel icon. Icons are displayed on the FAX waiting screen and the FAX operation screen. |
| Error display | Displayed by LCD panel |
| Time display | Date and time displayed. <br> - Present time is displayed on the sub-area. |
| Remote station ID display | Yes <br> - The TSI/CSI display during communications |
| Other operation keys | [Application] key: Moves to the FAX application function setting screen. <br> - Check Setting key: Valid <br> - */\# button: Yes <br> - Help button: Yes |

### 25.2 Functional specifications

### 25.2.1 Dial functions

| Abbreviated dial | Yes <br> - Possible to register 2000 stations. (1000 with no HDD installed) <br> - 38 digits maximum <br> - Possible to search the remote station list in the order of abbreviation numbers and Indexes. <br> - The registration names must be 24 digits or less. <br> - Registration name auto registration function: No <br> - Second FAX No. registration function: No <br> - Impossible to register the communication mode. <br> - Possible to register Line Setting (Overseas TX, ECM Off, V. 34 OFF, check destination, line selection (Only with four fax kit installed)). <br> - There is no registration function provided of [Scan Setting], [Comm. Setting] except the line setting. |
| :---: | :---: |
| Program dial | 400 dials (200 with no HDD installed) |
| Key pad dial | 38 digits maximum |
| Group dial | Up to 100 groups. Possible to register group names. Up to 500 remote stations per each group by abbreviated numbers only. |
| Dialing of multiple remote stations | 605 remote stations maximum (abbreviated 500 + key pad 100 + manual input e-mail destination 5) |
| Manual redial | Yes <br> - Possible to select from five latest histories. |
| Automatic redial | Yes <br> - Automatically redial when remote stations are busy or return no responses or transmission errors occur at the memory transmission <br> - Possible to receive during redial waiting. <br> - Another call is possible. (Not possible when there are two redial waiting jobs.) |
| JOB LIST redial | No |
| Pulse/tone switching | Possible to switch by using the [*] key on the key pad or [Tone] key on the Direct Input screen. |
| PBX mode setting | Yes <br> - Possible to turn ON or OFF the PBX connection and to register the external access code. <br> - There is the automatic removal function of external access code to registered abbreviated remote station No. Nothing is automatic addition function. |
| Pseudo off-hook | Yes <br> - The manual start is possible by using the pseudo off-hook. <br> - [Off-Hook] key on LCD |
| Call progress detection | DC loop (Depends on country spec). <br> - Dial tone (Ditto) <br> - Busy tone (Ditto) <br> - Second dial tone (Ditto) |
| Dial parameters | Dialing signals DP (10 pps) and DTMF (Depends on country spec) <br> - Pause between digits1 to 7 seconds (Users cannot set.) <br> - Pause between digits 3 seconds (fixed) |

| Phone book dial (Abbr) | Yes <br> $\bullet$ <br> External phone connection jack |
| :--- | :--- |
| Yes <br> $\bullet$ <br> • Depends on specifications of each country. |  |

### 25.2.2 Transmission

| Timer transmission | 24-hour (max.) timer setting is possible. (one station, sequential multi-stations transmission) |  |  |
| :---: | :---: | :---: | :---: |
| Batch transmission | No |  |  |
| Timer polling | 24-hour (max.) timer setting is possible. (one remote station polling and sequential polling reception) |  |  |
| No. of timers | 21 transmissions and pollings in total. The number of sequential pollings is one. |  |  |
| Memory transmission reservation | The memory transmission reservation is possible during communications. (memory registration of the DF memory transmission and platen memory transmission documents) |  |  |
| DF transmission reservation | No |  |  |
| Fold erase transmission | No |  |  |
| Frame erase transmission | Yes <br> - Platen documents and book documents <br> - DF documents are possible as well. <br> - The regular mode only |  |  |
| Automatic layout transmission (Outside documents are erased.) | No |  |  |
| Reverse-image transmission | No |  |  |
| 2in1 transmission | No |  |  |
| Book transmission | No |  |  |
| Scanning size appointment | Yes <br> - Scans documents in the appointed size irrelevant to document sizes and sends them. Transmits documents in the appointed scanning width and length at the platen transmission and the DF transmission. <br> - The effective image area is based on the center in the DF transmission. (Corner-base scanning in mixed-size document mode.) |  |  |
| Document image quality appointment | Yes <br> - Selected from [Text], [Text/Photo, Printed], [Text/Photo, PhotoPaper], [Photo, Printed], [Photo, PhotoPaper], [Dot Matrix Original] or [Copied Paper]. |  |  |
| Multi-stations | 605 stations maximum (Abbr dial x 500 stations, keypad dial x 100 stations and E-Mail $\times 5$ ) The timer appointment is possible. |  |  |
| Memory transmission | The default is the memory transmission ( $\triangle$ : Only the communication mode is possible) |  |  |
|  | Quick memory transmission | DF transmission | $\bigcirc$ |
|  |  | Platen transmission | One page only |
|  |  | Mixture of DF/platen documents | $\times$ |
|  |  | Advanced communication function | $\triangle$ Only the communication mode is possible |
|  |  | Manual transmission | $\bigcirc$ |
|  |  | Transmission when the printer is active | $\times$ |
|  | Memory transmission | DF transmission | $\bigcirc$ |
|  |  | Platen transmission | After the Separate Scan setting, the setting is read with the [Start] key and the communication is started up with the [Finish] key. |
|  |  | Mixture of DF/platen documents | After the Separate Scan setting, the setting is read with the [Start] key and the communication is started up with the [Finish] key. |
|  |  | Advanced communication function | $\bigcirc$ |
|  |  | Manual transmission | $\times$ |
|  |  | Transmission when the printer is active | $\bigcirc$ |
| Forwarding transmission | Yes <br> - Automatic forward: Automatic forward of received documents to remote stations registered in advance. <br> - Manual forward: No |  |  |
| Interruption transmission | Single station transmission reservation automatically interrupts between stations of multiple station communications. |  |  |
| International communication | Yes |  |  |

|  | - When the remote station is V17, communications start at TCM 7,200 bps. When the remote station is V34, they start at $28,800 \mathrm{bps}$. |
| :---: | :---: |
| V34-off transmission | Transmitted without V 34 mode. The V 34 -off appointment can be registered in the abbreviated / program dials. <br> This is used when the transmission error code related to V34 occurs frequently. |
| Long original transmission | Yes |
| DF irregular-size transmission | Possible to transmit irregular-size originals from DF. The main scanning is the max. document width set on DF, and the sub scanning depends on document length. <br> - Width: $297 \mathrm{~mm} / 11.69$ inch at the maximum <br> - Length: $1000 \mathrm{~mm} / 39.37$ inch at the maximum |
| Incomplete TX hold | Yes |
| Instant batch transmission (Bundled transmission) | No |
| Confidential transmission | Transmission to the confidential BOX of a remote station by using the F code (SUB/SID). Appoints the confidential BOX No. by using SUB. Set the communication password using SID as required. |
| Relay request | The relay request by using the F-code (SUB/SID). Appoints the relay BOX No. by using SUB. |
| Relay transmission | No |
| Transmission error prevention | - Check destination: When transmitting, compares the FAX No. specified with the FAX No. information (CSI) of the remote station and transmits only when both numbers are the same. <br> - Destination check display function: When transmitting, displays the list of addresses to allow to check the address again and then transmit. <br> - Restrict FAX broadcasting: Prohibits to specify multiple addresses for FAX transmission. |
| Confirm Address (at calling and registration) | During direct dialing, call is initiated only if the destination number inputted a first time matches with that inputted a second time. |

### 25.2.3 Polling

| Polled transmission | - There is one documents which allows the transmission setting. <br> - Documents are deleted after transmission. <br> - No additional scanning of documents. <br> - No DF polled transmission reservation. |
| :--- | :--- |
| Polling reception | The sequential polling is possible. <br> 600 stations maximum (abbreviated dial x 500 stations and key pad dialing $\times 100$ stations) |
| Call turnaround polling | No |
| Called turnaround polling | Yes |
| Closed polling transmission | No |
| Selective polling | Transmission and reception. <br> - The selective polling by using the F-code (SEP). <br> - There is a bulletin board BOX polling reception. <br> • No confidential BOX polling transmission. |

### 25.2.4 Line seizure mode and telephone function

| Line seizure mode switching | Possible to set the automatic reception and the manual reception. <br> • When the memory is full and there are no polling transmission reservations, the automatic <br> reception mode is cancelled. <br> • No switching of the auto / manual mode by appointing data and time. |
| :--- | :--- |
| Ans. Machine mode | Yes <br> • At the time of the CNG detection with the external phone off hook, a line is caught to start <br> reception. |
| Automatic reception mode | Time and the number of rings. <br> • No. of rings: 0 to 15 times (country spec) <br> $\bullet$ Time: 0 to 15 secs (country spec) |
| Hold | No |
| Handset | No |
| One-piece phone | Country spec |
| Call to external telephone | No |
| Conversation reservation | No |

### 25.2.5 Message reception and record

| Confidential reception | Reception at the confidential BOX appointed at the F-code (SUB). <br> When a transmission password (SID) has been set for the confidential box, the SID should be <br> specified as the communication password. <br> At the time of printing documents received at the confidential BOX, a password to access to the <br> confidential BOX is required. |
| :--- | :--- |
| Closed reception | Closed reception by using the SID (PWD) (Junk FAX) |

| Adaptive (automatic) reduction | 87 to $96 \%$ in steps of $1 \%$ <br> Becomes the adaptive reduction when "Print Separate Fax Pages = OFF" is selected. In case of the <br> adaptive reduction, if the reception image size is a little bigger than recording paper, the size is <br> automatically reduced so that it becomes within the recording paper size and is recorded. |
| :--- | :--- |
| Fixed reduction | No |
| Page separation record | Yes. Does not overlap at the division. <br> When the reception size is larger than A3 form, excessive image is destructed. |
| Equal size recording | Appropriate paper size auto selection <br> When paper is running out, paper is provided from another cassette with the same size of <br> paper. <br> - Tray-fix mode available |
| Cassette selection | No |
| 2-in-1 reception |  |

### 25.2.6 Memory function

| Display of used memory space | Yes (Fax screen: RDH memory) |
| :--- | :--- |
| Memory RX | A password is required for printing received files. The password (up to 8 digits) is set when the <br> memory RX mode is set in the utility mode. <br> First page can be printed. |
| Memory substitute reception | Yes (when there is no paper / no toner) |

### 25.2.7 Various communication function

| Short protocol | No |
| :---: | :---: |
| ECM | Yes <br> - Frame size: 64 byte / 256 byte |
| Communication timer | Yes <br> - 24 hours maximum. 21 including one for sequential polling timer. |
| Redial waiting | Five redial timers maximum |
| Error page resending | No (becomes the error page redial.) |
| Error page redial | Effective to both quick memory transmission and memory transmission. Redial and retransmission in case of RTN or comm error. <br> - Redial interval: follows the busy redial interval. <br> - Num. of redials: 0 to 7 times (different counter from the busy redial) |
| Total page number print | Yes <br> - Automatic print to the TTI in memory transmission. <br> - Added when the number of document pages is appointed for quick memory transmission. |
| Header memo | No |
| TTI (Transmitting terminal ID) | Yes <br> - 30 characters maximum <br> - Added not to the original read image, but to the top of the transmission image while in the image rotation being specified. <br> - The registration of up to 20 sender names is available. <br> - It is possible to make a selection to decide whether or not the address is printed at the header position. |
| RTI (Receiving terminal ID) | Yes <br> - After processing the enlargement and/or reduction operations, a record is made at the bottom position specified before conducting an image rotation. <br> - Date, time and page no. are recorded. |
| Fax remote diagnosis | Yes |
| MH fix | Yes. Setting can be made from the service mode. |
| Document insertion after dialing | Yes <br> - Document insertion is possible after dialing. Starts calling by using the [Start] button. |
| Communication history | Yes <br> - The last 700 communication histories are recorded in the communication journal. |
| Electronic key counter | Yes <br> - The number of transmitted pages to each user. Limit control is not done. |
| Key counter | Yes |
| Coin vendor | Yes (Support timing varies depending on models.) <br> - It is possible to use with FAX. |

### 25.2.8 User lists / reports

| Activity report | - The total of 700 communications (sending and reception) can be recorded. <br> - Automatic output: Daily / Every 100 Comm. / 100/ Daily <br> - Manual output: Yes |
| :--- | :--- |
| Timer Reservation TX Report | Automatic output: Users can turn ON / OFF. |
| TX result report | • Automatic output (ON / If TX Fails / OFF) |

|  | - Possible to output with images |
| :---: | :---: |
| Sync transmit reservation report | Automatic output: Users can turn ON / OFF. |
| Broadcast result report |  |
| Polled Tx reserve report |  |
| Polled Tx result report |  |
| Polled Rx result report |  |
| Sequential poll, Rx reservation report |  |
| Sequential poll, Rx result report |  |
| An address polling Rx reserved report |  |
| Relay TX Result Report |  |
| Relay Request Report |  |
| PC-Fax TX Error Report |  |
| Address Book List | Manual output (numeric order: output to be produced for each destination type) |
| Program List | Manual output |
| Group List |  |
| Fax Setting List |  |
| Bulletin TX Report | Automatic output: Users can turn ON / OFF. |
| Confidential RX Report | Auto output at the F code confidential reception. Automatic output: Users can turn ON / OFF. |
| Subject/Text list | Manual output |

### 25.2.9 Other user functions

| Fax ID | Number ID: 20 digits (max.) |
| :--- | :--- |
| Header note | No |
| Language Selection | Yes |

### 25.3 Network fax specifications

### 25.3.1 Internet Fax

| Image memory capacity | 128 GB (128 GB of 250 GB of the hard disk is used as a memory.) |  |
| :---: | :---: | :---: |
| Max. no. of stored pages | Approx. 10000 pages (numbers of pages in the case of storing standard A4-size pages containing approximately 700 characters at "fine" resolution) |  |
| Scanning line density | Ultra fine | 600 dpi x 600 dpi |
|  | Super fine | 400 dpi x 400 dpi |
|  | Fine | 200 dpi x 200 dpi |
|  | Normal | 200 dpi $\times 100$ dpi |
| Transmission mode (File type) | monochrome (TIFF-FX) |  |
| Transmission coding methods | - TIFF-S (MH) <br> - TIFF-F (MR/MMR) |  |
| Max. scanning size | - $420 \mathrm{~mm} \times 297 \mathrm{~mm}$ (A3 size) <br> - Width: 297 mm <br> - Length: 1000 mm at the maximum |  |
| Max. recording size | - $420 \mathrm{~mm} \times 297 \mathrm{~mm}$ (A3 size) <br> - Length: 1000 mm at the maximum <br> - When receiving the data of an original that is longer than the paper sizes set in the paper trays, the data is printed according to the setting of [Print Separate Fax Pages]. |  |
| Treatment of transmission error | Mail transmitted again. | None |
|  | Internet fax Rx error report | When documents cannot be sent to the SMTP server, transmission error report to be printed/not printed can be set. |
|  |  | When MDN/DSN response is received, to be printed/not to be printed can be set. |
|  |  | When MDN/DSN response is received, transmission result is indicated on the transmission control report. |
|  |  | MDN/DSN response monitoring time can be set in the range from 0 to 99 hours. |
| Mail reception | Mail acquisition interval | Can be set to 1 to 60 minutes. |
|  | Manual POP reception | Possible |
|  | Reception by specifying a box | Not Available (except Memory RX) |
|  | Received document size | width: A4 / B4 / A3 |
|  | Reception coding system | TIFF-S (MH), TIFF-F (MR/MMR) |
| List/report | Print DSN message | Output can be produced |

|  | Print MDN message | Output can be produced |
| :---: | :---: | :---: |
|  | Print receipt mail text | Output can be produced |
|  | Network fax relay result report | Output can be produced |
|  | Network fax activity report | - During automatic output: Shared with Fax Activity Report. Max. 100. <br> - During manual output: Shared with Fax Activity Report. Max. 700. |
|  | Network fax Rx error report | Output can be produced |

25.3.2 IP Address Fax

| Image memory capacity | 128 GB (128 GB of 250 GB of the hard disk is used as a memory.) |  |
| :---: | :---: | :---: |
| Max. no. of stored pages | (numbers of pages in the case of storing standard A4-size pages containing approximately 700 characters at "fine" resolution) |  |
| Scanning line density | Ultra fine | 600 dpi x 600 dpi |
|  | Super fine | 400 dpi $\times 400$ dpi |
|  | Fine | $\begin{aligned} & 200 \text { dpi x } 200 \text { dpi } \\ & 300 \text { dpi } \times 300 \text { dpi (Color: Compact PDF only) } \end{aligned}$ |
|  | Normal (Monochrome only) 200 dpi x 100 dpi |  |
| Transmission mode (File type) | - Color (PDF, Compact PDF, TIFF-C) / Monochrome (TIFF) <br> - Capable of transmitting TIFF-C (JPEG) <br> - Incapable of receiving TIFF-C (JPEG) (any receiving TIFF-C jobs are discarded) |  |
| Coding method | MH/MR/MMR (applicable only to monochrome format) |  |
| Max. scanning size | - $420 \mathrm{~mm} \times 297 \mathrm{~mm}$ (A3 size) <br> - Width: 297 mm <br> - Length: 1000 mm at the maximum |  |
| Max. recording size | - $420 \mathrm{~mm} \times 297 \mathrm{~mm}$ (A3 size) <br> - 1000 mm in the maximum recording size <br> - Originals in excess of 1000 mm cannot be received. <br> - In the color mode, the reception of an original in excess of 432 mm in length is unavailable. <br> - When receiving the data of an original that is longer than the paper sizes set in the paper trays, the data is printed according to the setting of [Print Separate Fax Pages]. (Only available for monochrome reception) |  |
| Treatment of transmission error | Retry | Retry when a transmission error occurs at SIP Direct SMTP transmission. <br> Error codes subject to retry: N10, N12, N15 to 17 only |
|  | TX error report | - TX error report printing ON/OFF can be set. <br> - A TX error report is printed when a TX error occurs and the TX error is recorded in the activity. |
| Reception | Received document size | Max. document width to be received: A3 |
|  | Reception coding system | - TIFF-S (MH) <br> - TIFF-F (MR/MMR) <br> - PDF <br> - Compact PDF <br> - TIFF-C |
|  | Received file size | - Unlimited (depends on the space available for use in the HDD) <br> - The file is not received, if the space available for use in the HDD is 107 MB or less. <br> - If the space available for use in the HDD runs out during reception, the session is abnormally terminated and the received file is deleted. |
| Report | Print receipt mail text | Possible <br> - During automatic output: Shared with Fax Activity Report. Max. 100. <br> - During manual output: Shared with Fax Activity Report. Max. 700. |
|  | IP address fax activity report |  |
|  | IP address fax result report | In common use with fax reception result report |
|  | IP Address Fax RX Error Report | Possible |

## 26. i-Option

### 26.1 Available function for i-Option

- The functions available for i-Option are as follows.

NOTE

- To use the i-Option functions, upgrade kit UK-211 must be installed. (Except LK-111, LK-115 v2 and My Panel) Not required for bizhub C658/C558/C458

### 26.1.1 List of advanced functions

| Function | Overview | Required option |
| :---: | :---: | :---: |
| PDF processing | Allows you to use features such as encryption of a PDF file, addition of an electronic signature, addition of file properties, creation of a PDF/A-based PDF file, and PDF linearization when sending a PDF file. | LK-102 v4 or LK-110 v2 |
| Voice guidance * | This function also helps people who have difficulty viewing the screen to carry out operations more smoothly via voice guidance. It is available on the Enlarge Display screen, Guidance screen, or Accessibility Settings screen. <br> English and Japanese are available. | - LK-104 v3 |
| Searchable PDF | Allows you to paste transparent text data into a PDF file when converting scanned original data into PDF files, and create a searchable PDF file. This function automatically creates text information from scanned images using OCR character recognition technology. | - LK-105 v4 |
| Barcode font | Allows you to generate a bar code based on data sent to this machine from the ERP (Enterprise Resource Planning) system, and print it from this machine. You can directly print data without using the printer driver. | - LK-106 |
| Unicode font | Allows you to print text information (unicode) of multiple languages sent to this machine from the ERP (Enterprise Resource Planning) system. You can directly print data without using the printer driver. | - LK-107 |
| OCR font | OCR font can be used on this machine. OCR font is standardized font that enables text to be appropriately recognized when the OCR (Optical Character Recognition) is used. | - LK-108 |
| Encryption PDF (Digital ID) | Allows you to encrypt the PDF using a user digital signature when sending a PDF file. | - LK-110 v2 |
| Searchable PDF (Fax RX Document) | Allows you to create a text searchable PDF file when converting a received fax into a PDF file using the Forward TX function or TSI Routing function and sending it to PC. |  |
| OOXML File Conversion | Allows you to send or store the scanned original data by converting it into an OOXML (DOCX or XLSX) file. Also allows you to paste transparent text data and create a text searchable OOXML file. <br> This function automatically creates text information from scanned images using OCR character recognition technology. |  |
| Compact PDF (Print RX Document) | Allows you to select a file type as Compact PDF when fetching the data stored in the box of this machine using the printer driver and sending it by E-mail or sending it to PC. |  |
| High image quality compact PDF | This function improves the image processing accuracy when creating a Compact PDF data. <br> This function improves the reproducibility of the colored characters or lines. Also, it allows you to set the reversed characters as the texts to be searched. |  |
| E-mail RX Print | Allows you to print the file attached to an E-mail from this machine when the E-mail has been sent to the address of this machine. |  |
| ThinPrint function | Allows you to enable the ThinPrint function on this machine. ThinPrint is such a function allows you to make a speedy print by compressing the data or controlling the marginal zone when sending a print job from ThinPrint Engine (.print Engine) to ThinPrint Client (.print Client). This machine operates as ThinPrint Client (.print Client). | - LK-111 |
| Ubiquitous Printing | Ubiquitous printing is a function that executes print jobs, which are spooled in an MFP through the user's computer once, from any MFP in a ubiquitous group that consists of multiple MFPs. | - LK-114 |
| TPM (Trusted Platform Module) | TPM (Trusted Platform Module) is a hardware chip used for processing such as information encryption and decryption. Security enhancement is realized by encrypting confidential information such as certificates and passwords of this machine. <br> The TPM key used for encrypting confidential information on the machine is saved in a dedicated storage space mounted on the TPM chip. No external devices can access the storage space and the confidential information can be kept in utmost security. <br> In addition, for future possible replacement of the TPM chip, information required for restoring the TPM key can be saved for backup in a USB memory device. | - LK-115 v2 |

| Function | Overview | Required option |
| :--- | :--- | :--- |
| My Panel | Allows you to use the touch panel, which is customized only for you, through any <br> MFP connected to the network. The touch panel customization settings are stored <br> on the My Panel Manager server. If necessary, they can be changed on My Panel <br> Manager. | • My Panel Manager |
| Application license |  |  |

- *: To use voice guidance, in addition to LK-104 license activation, optional local interface kit EK-608 or EK-609 must be installed.

### 26.1.2 Activation procedures of i-Option

For details of the activation procedures, refer to the followings.

- Activation via Administrator Settings: License Settings
- Activation via Service Mode: I.8.3.10 License management - Activation

D OVERALL COMPOSITION

1. SYSTEM CONFIGURATION (bizhub C368/C308/C258)

### 1.1 System configuration

### 1.1.1 System front view 1

| $[1]$ | bizhub C368/C308/C258 | $[2]$ | Original Cover OC-511 |

- *1: Japan only
- *2: Except for Japan
- *3: LK-115 v2 is to be soon mounted.

### 1.2 Optional configuration

1.2.1 Combination configuration of main body and document options

| 1 | Main body | OC-511 |  |  |
| :--- | :--- | :--- | :--- | :--- |
| 2 | Main body | DF-629 | SP-501 | Spare TX Marker Stamp |
| 3 | Main body | DF-704 | SP-501 | Spare TX Marker Stamp |

### 1.2.2 Combination configuration of main body and paper feed options

| 1 | Main body | DK-705 |  |
| :--- | :--- | :--- | :--- |
| 2 | Main body | DK-510 |  |
| 3 | Main body | PC-110 | LU-302 |
| 4 | Main body | PC-210 | LU-302 |
| 5 | Main body | PC-410 | LU-302 |

1.2.3 Combination configuration of main body and post-processing options

| 1 | Main body | JS-506 |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | Main body | FS-533 | PK-519 | SK-602 |  |
| 3 | Main body | RU-513 | FS-534 | PK-520 | SK-602 |
| 4 | Main body | RU-513 | FS-534SD | PK-520 |  |

### 1.2.4 Combination of main body and fax kit

(1) Japan, North America

| 1 | Main body | FK-514 (main line) | FK-514 (line 2) | MK-742 | FK-515 (line 3) | FK-515 (line 4) |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- |

(2) Europe

| 1 | Main body | FK-514 (main line) | FK-514 (line 2) |
| :--- | :--- | :--- | :--- |

### 1.2.5 Combination of main body (scanner section) and heater

(1) Japan

| 1 | Main body (scanner section) | MK-719 | HT-510 |
| :--- | :--- | :--- | :--- |

(2) International

- No optional settings

### 1.2.6 Combination configuration of paper feed options and dehumidifier heater

## (1) Japan

| 1 | DK-510 (standard equipment <br> dehumidifier heater) | HT-509 | LU-302 (standard equipment <br> dehumidifier heater) | TK-101 |
| :---: | :--- | :--- | :--- | :--- |
| 2 | PC-110 (standard equipment <br> dehumidifier heater) | HT-509 | LU-302 (standard equipment <br> dehumidifier heater) | TK-101 |
| 3 | PC-210 (standard equipment <br> dehumidifier heater) | HT-509 | LU-302 (standard equipment <br> dehumidifier heater) | TK-101 |
| 4 | PC-410 (standard equipment <br> dehumidifier heater) | HT-509 |  |  |

## (2) International

| 1 | DK-510 | HT-509 | MK-734 | LU-302 (standard equipment <br> dehumidifier heater) |  |
| :---: | :--- | :--- | :--- | :--- | :--- |
| 2 | PC-110 TK-101 |  |  |  |  |
| 3 | PC-210 | HT-509 | MK-734 | LU-302 (standard equipment <br> dehumidifier heater) | TK-101 |
| 4 | PC-410 | HT-509 | MK-734 | LU-302 (standard equipment <br> dehumidifier heater) |  |

## 2. SYSTEM CONFIGURATION (bizhub C658/C558/C458)

### 2.1 System configuration

2.1.1 System front view 1

| $[1]$ | bizhub C658/C558/C458 | $[2]$ | Stamp Unit SP-501 |

7. CONTROL BLOCK DIAGRAM (bizhub C368/C308/C258)

8. CONTROL BLOCK DIAGRAM (bizhub C658/C558/C458)

## 9. IMAGE CREATION PROCESS

| [1] | Photoelectric conversion | The light reflected off the surface of the original is separated into different colors using the color filters ( $R, G$, and $B$ ); CCD then converts it into a corresponding electric signal and outputs the signal to the IR imaging processing section. |
| :---: | :---: | :---: |
| [2] | Printer image processing | - The electric signal is converted to digital image signals. After going through some corrections, video signals (C, M, Y, and K) are output to the printer image processing section. <br> - D/A conversion will be performed after the VIDEO signals (Y, M, C, K) are corrected. This data will control the emission of the laser diode. |
| [3] | Photo conductor | The image of the original projected onto the surface of the photo conductor is changed to a corresponding electrostatic latent image. |
| [4] | Photo conductor charging Roller | Supply AC/DC charge on the photo conductor. |
| [5] | Laser exposure | Expose photo conductor to a laser beam to develop electrostatic latent image. |
| [6] | Developing | - The toner, agitated and negatively charged in the developer mixing chamber, is attracted onto the electrostatic latent image formed on the surface of the photo conductor. It is thereby changed to a visible, developed image. <br> - AC and DC negative bias voltages are applied to the developing roller, thereby preventing toner from sticking to the background image portion. |
| [7] | 1st image transfer | A DC positive voltage is applied to the backside of the transfer belt, thereby allowing the visible, developed image on the surface of each of the photo conductors (Y, M, C, and K) to be transferred onto the transfer belt. |
| [8] | 2nd image transfer | A DC positive voltage is applied to the backside of the paper, thereby allowing the visible, developed image on the surface of the transfer belt to be transferred onto the paper. |
| [9] | Paper separation | The paper, which has undergone the 2nd image transfer process, is neutralized so that it can be properly separated from the transfer belt by the paper separator claws. |
| [10] | Transfer belt cleaning | Residual toner on the surface of the transfer belt is collected for cleaning by cleaning blade. |
| [11] | Main erase | The surface of the photo conductor is irradiated with light, which neutralizes any surface potential remaining on the surface of the photo conductor. |
| [12] | Photo conductor cleaning | The residual toner left on the surface of the photo conductor is scraped off. |
| [13] | Fusing | The visible toner image transferred onto the surface of the paper is melted by the heat of the fusing roller and fixed to the paper by pressure. |

10. IMAGE FORMING CONTROL (bizhub C368/C308/C258)

11. IMAGE FORMING CONTROL (bizhub C658/C558/C458)

12. PROCESS SPEED (bizhub C368/C308/C258)

| Paper Type/Mode | bizhub C368 | bizhub C308 /C258 |

## E SERVICE TOOL

1. bizhub $\mathrm{C} 368 / \mathrm{C} 308 / \mathrm{C} 258$
1.1 Service material list

| Name | Shape | Parts No. |  |
| :--- | :---: | :---: | :---: |
| Cleaning pad |  | A5AWP001\#\# | 10pcs/1 pack |
| Hydro-wipe |  |  |  |

### 1.2 CE tool list

| Tool name | Shape | Quantity | Parts No. | Remarks |
| :--- | :---: | :---: | :---: | :---: |
| Color chart |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |

### 1.3 Utility tool

1.3.1 IC card information setting tool of AU-201/AU-201S/AU-202H/OMNIKEY 5427CK (AU-205H)/SCL-010/YSoft card reader
(1) Outline

- Before connecting the AU-201/AU-201S/AU-202H/OMNIKEY 5427CK (AU-205H)/SCL-010 card reader to the MFP, it is necessary to prepare an IC card information setting file with the loadable driver. To prepare this file, a tool is used for preparing the IC card information setting file for use in each card reader.
(2) IC card information setting file preparation tool
(a) Tool names

Tools for CE

- For AU-201/AU-201S: Auth Device Tool Advanced for AU-201/AU-201S
- For SCL-010: Auth Device Tool Advanced for SCL-010
- For AU-202H: Auth Device Tool Advanced for AU-202H
- For OMNIKEY 5427CK (AU-205H): Auth Device Advanced for 5427CK (AU-205H)
- For the YSoft card reader: Auth Device Tool Advanced for YSoft CRv2/ YSoft CRv3
(b) System requirement of tools for CE

| OS | • Windows 7 <br> • Windows 8.1 <br> - Windows 10 <br> Support both 32-bit (x86) and 64-bit (x64) editions. |
| :--- | :--- |
| Library (Any of these <br> needs to be installed) | - Microsoft .Net Framework2.0 SP2 <br> - Microsoft .Net Framework3.0 SP2 <br> - Microsoft .Net Framework3.5 SP1 <br> • Microsoft .Net Framework3.5.1 |
| Hard disk | 3 MB or more free space is required |
| Display | $800 \times 600$ pixels,16 bit full color |

(3) IC card information setting procedures
(a) Preparations for the following (c), (e), (g), (j), (k) or (m) procedures

- Using the PageScope Data Administrator, register the target MFP in advance.
- Set the MFP into a state in which it can communicate over the network.
- Accessing PageScope Web Connection -> [Administrator mode] -> [Security Settings], issue a self-signed certificate from [Device Certificate Setting] and install it.
- Accessing PageScope Web Connection -> [Administrator mode] -> [Network Settings], set use of [SSL/TLS] in [OpenAPI] to "SSL Only".
NOTE
- Only one loadable device driver must be stored in the USB memory, and please do not save any other data in the USB memory.
(b) Auth Device Tool Advanced for AU-201/AU-201S (Setting IC card information in the loadable driver in advance)

1. Obtain the loadable driver (ICC_LDR.tar) for use in AU-201/AU-201S that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for AU-201/AU-201S.
3. Select [Import Loadable Driver] from [File] and select the loadable driver.
4. Select card type.
5. If the card is good for detailed settings, click [Detail Setting/Extra Data Setting].
6. Input the necessary extended data. (For details, ask the IC card administrator.)
7. Select Loadable Driver in [Export Format] and click [Export].
8. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
9. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

10. Call the Service Mode to the screen of the MFP.
11. Select [System 2] -> [Driver Install] -> [Install].
12. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
13. Select [Loadable driver] and touch the [Start] to install the loadable driver.
14. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
15. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
16. Set the authentication user.

## (c) Auth Device Tool Advanced for AU-201/AU-201S (Installing IC card information setting only in the MFP afterward)

1. Install the loadable driver for use in AU-201/AU-201S that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for AU-201/AU-201S.
3. Select card type.
4. If the card is good for detailed settings, click [Detail Setting/Extra Data Setting].
5. Input the necessary extended data. (For details, ask the IC card administrator.)
6. Select IC card information setting file in [Export Format] and click [Export].
7. Set the encrypted password.
8. Save the file (iccConfig.bin).
9. Start the PageScope Data Administrator, and select the target MFP.
10. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
11. Using [Browse], select the file saved in step 8.
12. Click [Open] and type the encrypted password set in step 7.
13. Click [Next] and select the device to be imported.
14. Click [Start] and write the file in the MFP.
15. Check that "Normal" is shown in [Status].
16. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
17. Set the authentication user.
(d) Auth Device Tool Advanced for SCL-010 (Setting IC card information in the loadable driver in advance)
18. Obtain the loadable driver (ICC_LDR.tar) for use in SCL-010 that is compatible with the type of card used.
19. Start the Auth Device Tool Advanced for SCL-010.
20. Select card type.
21. Select Loadable Driver in [Export Format] and click [Export].
22. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
23. Copy the output loadable driver (ICC LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] -> [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.
(e) Auth Device Tool Advanced for SCL-010 (Installing IC card information setting only in the MFP afterward)
14. Install the loadable driver for SCL-010 to the MFP.
15. Start the Auth Device Tool Advanced for SCL-010.
16. Select card type.
17. Select IC card information setting file in [Export Format] and click [Export].
18. Set the encrypted password.
19. Save the file (iccConfig.bin).
20. Start the PageScope Data Administrator, and select the target MFP.
21. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
22. Using [Browse], select the file saved in step 6.
23. Click [Open] and type the encrypted password set in step 5.
24. Click [Next] and select the device to be imported.
25. Click [Start] and write the file in the MFP.
26. Check that "Normal" is shown in [Status].
27. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
28. Set the authentication user.

## (f) Auth Device Tool Advanced for AU-202H (Setting IC card information in the loadable driver in advance)

1. Obtain the loadable driver (ICC_LDR.tar) for use in AU-202H that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for AU-202H.
3. Set the card ID length.
4. Select Loadable Driver in [Export Format] and click [Export].
5. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
6. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory.

## NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] -> [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.
(g) Auth Device Tool Advanced for AU-202H (Installing IC card information setting only in the MFP afterward)
14. Install the loadable driver for AU-202H to the MFP.
15. Start the Auth Device Tool Advanced for AU-202H.
16. Set the card ID length.
17. Select IC card information setting file in [Export Format] and click [Export].
18. Set the encrypted password.
19. Save the file (iccConfig.bin).
20. Start the PageScope Data Administrator, and select the target MFP.
21. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
22. Using [Browse], select the file saved in step 6.
23. Click [Open] and type the encrypted password set in step 5.
24. Click [Next] and select the device to be imported.
25. Click [Start] and write the file in the MFP.
26. Check that "Normal" is shown in [Status].
27. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
28. Set the authentication user.
(h) Auth Device Tool Advanced for 5427CK (Setting IC card information in the loadable driver in advance: TypeA/ HID Prox/Multiple)

## NOTE

- Selecting [Multiple] makes cards of HID Prox, HID iCLASS and TypeA available at the same time.

1. Obtain the loadable driver (ICC_LDR.tar) for use in OMNIKEY 5427CK (AU-205H) that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for 5427CK (AU-205H).
3. Select card type. (Except for HID iCLASS)
4. Select Loadable Driver in [Export Format] and click [Export].
5. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
6. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] -> [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.

## (i) Auth Device Tool Advanced for 5427CK (Setting IC card information in the loadable driver in advance: HID

 iCLASS).1. Obtain the loadable driver (ICC_LDR.tar) for use in OMNIKEY 5427 CK (AU-205H) that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for 5427CK (AU-205H).
3. Select HID iCLASS.
4. Click [Detail Setting].
5. Set the card ID length.
6. Select Loadable Driver in [Export Format] and click [Export].
7. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
8. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

9. Call the Service Mode to the screen of the MFP.
10. Select [System 2] -> [Driver Install] -> [Install].
11. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
12. Select [Loadable driver] and touch the [Start] to install the loadable driver.
13. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
14. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
15. Set the authentication user.
(j) Auth Device Tool Advanced for 5427CK (Installing IC card information setting only in the MFP afterward: TypeA/ HID Prox/Multiple)
16. Install the [loadable driver] for the OMNIKEY 5427CK (AU-205H) on the MFP.
17. Start the Auth Device Tool Advanced for 5427CK (AU-205H).
18. Select card type. (Except for HID iCLASS)
19. Select IC card information setting file in [Export Format] and click [Export].
20. Set the encrypted password.
21. Save the file (iccConfig.bin).
22. Start the PageScope Data Administrator, and select the target MFP.
23. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
24. Using [Browse], select the file saved in step 6.
25. Click [Open] and type the encrypted password set in step 5.
26. Click [Next] and select the device to be imported.
27. Click [Start] and write the file in the MFP.
28. Check that "Normal" is shown in [Status].
29. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
30. Set the authentication user.
(k) Auth Device Tool Advanced for 5427CK (Installing IC card information setting only in the MFP afterward: HID iCLASS)
31. Install the [loadable driver] for the OMNIKEY 5427 CK (AU-205H) on the MFP.
32. Start the Auth Device Tool Advanced for 5427CK (AU-205H).
33. Select HID iCLASS.
34. Click [Detail Setting].
35. Set the card ID length.
36. Select IC card information setting file in [Export Format] and click [Export].
37. Set the encrypted password.
38. Save the file (iccConfig.bin).
39. Start the PageScope Data Administrator, and select the target MFP.
40. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
41. Using [Browse], select the file saved in step 8.
42. Click [Open] and type the encrypted password set in step 7.
43. Click [ Next ] and select the device to be imported.
44. Click [Start] and write the file in the MFP.
45. Check that "Normal" is shown in [Status].
46. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
47. Set the authentication user.
(I) Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 (Setting IC card information in the loadable driver in advance)
NOTE

- If a YSoft card reader is used, when performing authentication, the default setting for the loadable driver makes the card to be informed as an HID Prox card regardless of which type you are using. To change the card type when performing authentication, using Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 to choose a corresponding card type to be reported to the authentication program from the following list.

| Card Reader Name | Readable Card Type | IC Card Information Setting (card type to <br> be reported) |
| :--- | :--- | :--- |
| KM USB Reader v2 MultiReader HF | Mifare | TypeA (1) *1 |
| KM USB Reader v2 Legic Advant | LEGIC | TypeA (1) *1 |
| KM USB Reader v2 ASK FSK 125kHz | EM4100, EM4102, RFID 125kHz | EM4100/ <br> EM4102/ <br> RFID 125kHz |
| KM USB Reader v2 Mot/Ind W26 |  | Indala |
| KM USB Reader v2 HID Prox | HID Prox | HID Prox (1) *2 |
| KM USB Reader v2 HID iCLASS | HID iCLASS | HID iCLASS (1) *3 |
| KM USB Reader v3 MF \& Legic | LEGIC | TypeA (1) *1 |
| KM USB Reader v3 Indala | Indala | Indala |
| KM USB Reader v3 MF+ | EM4100, EM4102, RFID 125kHz | EM4100/ |
| EM4102/ <br> RFID 125kHz |  |  |
|  | Mifare | TypeA (1) *1 |
|  | HID Prox | HID Prox (1) *2 |
|  | HID iCLASS | HID iCLASS (1) *3 |

[^7]4. Select Loadable Driver in [Export Format] and click [Export].
5. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
6. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] -> [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.
(m) Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 (Installing IC card information setting only in the MFP afterward)
NOTE

- If a YSoft card reader is used, when performing authentication, the default setting for the loadable driver makes the card to be informed as an HID Prox card regardless of which type you are using. To change the card type when performing authentication, using Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 to choose a corresponding card type to be reported to the authentication program from the following list.

| Card Reader Name | Readable Card Type | IC Card Information Setting (card type to be reported) |
| :---: | :---: | :---: |
| KM USB Reader v2 MultiReader HF | Mifare | TypeA (1) *1 |
| KM USB Reader v2 Legic Advant | LEGIC | TypeA (1) *1 |
| KM USB Reader v2 ASK FSK 125kHz | EM4100, EM4102, RFID 125kHz | EM4100/ EM4102/ RFID 125kHz |
| KM USB Reader v2 Mot/Ind W26 | Indala | Indala |
| KM USB Reader v2 HID Prox | HID Prox | HID Prox (1) *2 |
| KM USB Reader v2 HID iCLASS | HID iCLASS | HID iCLASS (1) *3 |
| KM USB Reader v3 MF \& Legic | LEGIC | TypeA (1) *1 |
| KM USB Reader v3 Indala | Indala | Indala |
| KM USB Reader v3 MF+ | EM4100, EM4102, RFID 125kHz | $\begin{aligned} & \hline \text { EM4100/ } \\ & \text { EM4102/ } \\ & \text { RFID 125kHz } \end{aligned}$ |
|  | Mifare | TypeA (1) *1 |
|  | HID Prox | HID Prox (1) *2 |
|  | HID iCLASS | HID iCLASS (1) *3 |

### 3.3 Utility tool

### 3.3.1 IC card information setting tool of AU-201/AU-201S/AU-202H/OMNIKEY 5427CK (AU-205H)/SCL-010/YSoft card reader

(1) Outline

- Before connecting the AU-201/AU-201S/AU-202H/OMNIKEY 5427CK (AU-205H)/SCL-010 card reader to the MFP, it is necessary to prepare an IC card information setting file with the loadable driver. To prepare this file, a tool is used for preparing the IC card information setting file for use in each card reader.
(2) IC card information setting file preparation tool
(a) Tool names

Tools for CE

- For AU-201/AU-201S: Auth Device Tool Advanced for AU-201/AU-201S
- For SCL-010: Auth Device Tool Advanced for SCL-010
- For AU-202H: Auth Device Tool Advanced for AU-202H
- For OMNIKEY 5427CK (AU-205H): Auth Device Advanced for 5427CK (AU-205H)
- For the YSoft card reader: Auth Device Tool Advanced for YSoft CRv2/ YSoft CRv3
(b) System requirement of tools for CE

| OS | • Windows 7 <br>  <br>  <br>  <br>  <br> • Wupport both 32 -bit (x86) and 64-bit (x64) editions. <br> Sundows 10 |
| :--- | :--- |
| Library (Any of these <br> needs to be installed) | • Microsoft .Net Framework2.0 SP2 <br> • Microsoft .Net Framework3.0 SP2 <br> • Microsoft .Net Framework3.5 SP1 <br> • Microsoft .Net Framework3.5.1 |
| Hard disk | 3 MB or more free space is required |
| Display | $800 \times 600$ pixels,16 bit full color |

(3) IC card information setting procedures
(a) Preparations for the following (c), (e), (g), (j), (k) or (m) procedures

- Using the PageScope Data Administrator, register the target MFP in advance.
- Set the MFP into a state in which it can communicate over the network.
- Accessing PageScope Web Connection -> [Administrator mode] -> [Security Settings], issue a self-signed certificate from [Device Certificate Setting] and install it.
- Accessing PageScope Web Connection -> [Administrator mode] -> [Network Settings], set use of [SSL/TLS] in [OpenAPI] to "SSL Only".

## NOTE

- Only one loadable device driver must be stored in the USB memory, and please do not save any other data in the USB memory.
(b) Auth Device Tool Advanced for AU-201/AU-201S (Setting IC card information in the loadable driver in advance)

1. Obtain the loadable driver (ICC_LDR.tar) for use in AU-201/AU-201S that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for AU-201/AU-201S.
3. Select [Import Loadable Driver] from [File] and select the loadable driver.
4. Select card type.
5. If the card is good for detailed settings, click [Detail Setting/Extra Data Setting].
6. Input the necessary extended data. (For details, ask the IC card administrator.)
7. Select Loadable Driver in [Export Format] and click [Export].
8. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
9. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory.

## NOTE

- Please do not save any other data in the USB memory.

10. Call the Service Mode to the screen of the MFP.
11. Select [System 2] -> [Driver Install] -> [Install].
12. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
13. Select [Loadable driver] and touch the [Start] to install the loadable driver.
14. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
15. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
16. Set the authentication user.

## (c) Auth Device Tool Advanced for AU-201/AU-201S (Installing IC card information setting only in the MFP afterward)

1. Install the loadable driver for use in AU-201/AU-201S that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for AU-201/AU-201S.
3. Select card type.
4. If the card is good for detailed settings, click [Detail Setting/Extra Data Setting].
5. Input the necessary extended data. (For details, ask the IC card administrator.)
6. Select IC card information setting file in [Export Format] and click [Export].
7. Set the encrypted password.
8. Save the file (iccConfig.bin).
9. Start the PageScope Data Administrator, and select the target MFP.
10. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
11. Using [Browse], select the file saved in step 8.
12. Click [Open] and type the encrypted password set in step 7.
13. Click [Next] and select the device to be imported.
14. Click [Start] and write the file in the MFP.
15. Check that "Normal" is shown in [Status].
16. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
17. Set the authentication user.
(d) Auth Device Tool Advanced for SCL-010 (Setting IC card information in the loadable driver in advance)
18. Obtain the loadable driver (ICC_LDR.tar) for use in SCL-010 that is compatible with the type of card used.
19. Start the Auth Device Tool Advanced for SCL-010.
20. Select card type.
21. Select Loadable Driver in [Export Format] and click [Export].
22. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
23. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] -> [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.
(e) Auth Device Tool Advanced for SCL-010 (Installing IC card information setting only in the MFP afterward)
14. Install the loadable driver for SCL-010 to the MFP.
15. Start the Auth Device Tool Advanced for SCL-010.
16. Select card type.
17. Select IC card information setting file in [Export Format] and click [Export].
18. Set the encrypted password.
19. Save the file (iccConfig.bin).
20. Start the PageScope Data Administrator, and select the target MFP.
21. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
22. Using [Browse], select the file saved in step 6.
23. Click [Open] and type the encrypted password set in step 5.
24. Click [Next] and select the device to be imported.
25. Click [Start] and write the file in the MFP.
26. Check that "Normal" is shown in [Status].
27. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
28. Set the authentication user.
(f) Auth Device Tool Advanced for AU-202H (Setting IC card information in the loadable driver in advance)
29. Obtain the loadable driver (ICC_LDR.tar) for use in AU-202H that is compatible with the type of card used.
30. Start the Auth Device Tool Advanced for AU-202H.
31. Set the card ID length.
32. Select Loadable Driver in [Export Format] and click [Export].
33. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
34. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory.

## NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] -> [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.
(g) Auth Device Tool Advanced for AU-202H (Installing IC card information setting only in the MFP afterward)
14. Install the loadable driver for AU-202H to the MFP.
15. Start the Auth Device Tool Advanced for AU-202H.
16. Set the card ID length.
17. Select IC card information setting file in [Export Format] and click [Export].
18. Set the encrypted password.
19. Save the file (iccConfig.bin).
20. Start the PageScope Data Administrator, and select the target MFP.
21. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
22. Using [Browse], select the file saved in step 6.
23. Click [Open] and type the encrypted password set in step 5.
24. Click [Next] and select the device to be imported.
25. Click [Start] and write the file in the MFP.
26. Check that "Normal" is shown in [Status].
27. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
28. Set the authentication user.
(h) Auth Device Tool Advanced for 5427CK (Setting IC card information in the loadable driver in advance: TypeA/ HID Prox/Multiple)
NOTE

- Selecting [Multiple] makes cards of HID Prox, HID iCLASS and TypeA available at the same time.

1. Obtain the loadable driver (ICC_LDR.tar) for use in OMNIKEY 5427CK (AU-205H) that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for 5427CK (AU-205H).
3. Select card type. (Except for HID iCLASS)
4. Select Loadable Driver in [Export Format] and click [Export].
5. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
6. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] $->$ [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.
(i) Auth Device Tool Advanced for 5427CK (Setting IC card information in the loadable driver in advance: HID iCLASS).
14. Obtain the loadable driver (ICC_LDR.tar) for use in OMNIKEY 5427CK (AU-205H) that is compatible with the type of card used.
15. Start the Auth Device Tool Advanced for 5427 CK (AU-205H).
16. Select HID iCLASS.
17. Click [Detail Setting].
18. Set the card ID length.
19. Select Loadable Driver in [Export Format] and click [Export].
20. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
21. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory.

NOTE

- Please do not save any other data in the USB memory.

9. Call the Service Mode to the screen of the MFP.
10. Select [System 2] -> [Driver Install] -> [Install].
11. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
12. Select [Loadable driver] and touch the [Start] to install the loadable driver.
13. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
14. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
15. Set the authentication user.
```
(j) Auth Device Tool Advanced for 5427CK (Installing IC card information setting only in the MFP afterward: TypeA/
HID Prox/Multiple)
    1. Install the [loadable driver] for the OMNIKEY 5427CK (AU-205H) on the MFP.
    2. Start the Auth Device Tool Advanced for 5427CK (AU-205H).
    3. Select card type. (Except for HID iCLASS)
    4. Select IC card information setting file in [Export Format] and click [Export].
    5. Set the encrypted password.
    6. Save the file (iccConfig.bin).
    7. Start the PageScope Data Administrator, and select the target MFP.
    8. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
    9. Using [Browse], select the file saved in step 6.
    10. Click [Open] and type the encrypted password set in step 5.
    11. Click [Next] and select the device to be imported.
    12. Click [Start] and write the file in the MFP.
    13. Check that "Normal" is shown in [Status].
    14. Turn OFF the main power switch, wait for }10\mathrm{ sec., then turn the switch ON.
    15. Set the authentication user.
```

(k) Auth Device Tool Advanced for 5427CK (Installing IC card information setting only in the MFP afterward: HID iCLASS)

1. Install the [loadable driver] for the OMNIKEY 5427 CK (AU-205H) on the MFP.
2. Start the Auth Device Tool Advanced for 5427CK (AU-205H).
3. Select HID iCLASS.
4. Click [Detail Setting].
5. Set the card ID length.
6. Select IC card information setting file in [Export Format] and click [Export].
7. Set the encrypted password.
8. Save the file (iccConfig.bin).
9. Start the PageScope Data Administrator, and select the target MFP.
10. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
11. Using [Browse], select the file saved in step 8.
12. Click [Open] and type the encrypted password set in step 7.
13. Click [ Next ] and select the device to be imported.
14. Click [Start] and write the file in the MFP.
15. Check that "Normal" is shown in [Status].
16. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
17. Set the authentication user.
(I) Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 (Setting IC card information in the loadable driver in advance)

## NOTE

- If a YSoft card reader is used, when performing authentication, the default setting for the loadable driver makes the card to be informed as an HID Prox card regardless of which type you are using. To change the card type when performing authentication, using Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 to choose a corresponding card type to be reported to the authentication program from the following list.

| Card Reader Name | Readable Card Type | IC Card Information Setting (card type to be reported) |
| :---: | :---: | :---: |
| KM USB Reader v2 MultiReader HF | Mifare | TypeA (1) *1 |
| KM USB Reader v2 Legic Advant | LEGIC | TypeA (1) *1 |
| KM USB Reader v2 ASK FSK 125kHz | EM4100, EM4102, RFID 125kHz | $\begin{array}{\|l} \hline \text { EM4100/ } \\ \text { EM4102/ } \\ \text { RFID 125kHz } \end{array}$ |
| KM USB Reader v2 Mot/Ind W26 | Indala | Indala |
| KM USB Reader v2 HID Prox | HID Prox | HID Prox (1) *2 |
| KM USB Reader v2 HID iCLASS | HID iCLASS | HID iCLASS (1) *3 |
| KM USB Reader v3 MF \& Legic | LEGIC | TypeA (1) *1 |
| KM USB Reader v3 Indala | Indala | Indala |
| KM USB Reader v3 MF+ | EM4100, EM4102, RFID 125kHz | EM4100/ EM4102/ RFID 125kHz |
|  | Mifare | TypeA (1) *1 |
|  | HID Prox | HID Prox (1) *2 |
|  | HID iCLASS | HID iCLASS (1) *3 |

- *1 The content (ID) to be read from the type A card setting differs from which to be read by using AU-201/AU-201S.
- *2 The content (ID) to be read from the HID Prox card setting differs from which to be read by using AU-201H.
- *3 The content (ID) to be read from the HID iCLASS card setting differs from which to be read by using AU-202H.

1. Obtain the loadable driver (ICC_LDR.tar) for the YSoft card reader.
2. Start the Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3.
3. Select card type.
4. Select Loadable Driver in [Export Format] and click [Export].
5. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
6. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory. NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install] -> [Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [Loadable driver] and touch the [Start] to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
13. Set the authentication user.
(m) Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 (Installing IC card information setting only in the MFP afterward)
NOTE

- If a YSoft card reader is used, when performing authentication, the default setting for the loadable driver makes the card to be informed as an HID Prox card regardless of which type you are using. To change the card type when performing authentication, using Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3 to choose a corresponding card type to be reported to the authentication program from the following list.

| Card Reader Name | Readable Card Type | IC Card Information Setting (card type to be reported) |
| :---: | :---: | :---: |
| KM USB Reader v2 MultiReader HF | Mifare | TypeA (1) *1 |
| KM USB Reader v2 Legic Advant | LEGIC | TypeA (1) *1 |
| KM USB Reader v2 ASK FSK 125kHz | EM4100, EM4102, RFID 125kHz | $\begin{aligned} & \text { EM4100/ } \\ & \text { EM4102/ } \\ & \text { RFID 125kHz } \end{aligned}$ |
| KM USB Reader v2 Mot/Ind W26 | Indala | Indala |
| KM USB Reader v2 HID Prox | HID Prox | HID Prox (1) *2 |
| KM USB Reader v2 HID iCLASS | HID iCLASS | HID iCLASS (1) *3 |
| KM USB Reader v3 MF \& Legic | LEGIC | TypeA (1) *1 |
| KM USB Reader v3 Indala | Indala | Indala |
| KM USB Reader v3 MF+ | EM4100, EM4102, RFID 125kHz | EM4100/ EM4102/ RFID 125kHz |
|  | Mifare | TypeA (1) *1 |
|  | HID Prox | HID Prox (1) *2 |
|  | HID iCLASS | HID iCLASS (1) *3 |

[^9]- *2 The content (ID) to be read from the HID Prox card setting differs from which to be read by using AU-201H.
- *3 The content (ID) to be read from the HID iCLASS card setting differs from which to be read by using AU-202H.

1. Install the loadable driver for the YSoft card reader to the MFP.
2. Start the Auth Device Tool Advanced for YSoft CRv2/YSoft CRv3.
3. Select card type.
4. Select IC card information setting file in [Export Format] and click [Export].
5. Set the encrypted password.
6. Save the file (iccConfig.bin).
7. Start the PageScope Data Administrator, and select the target MFP.
8. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
9. Using [Browse], select the file saved in step 6.
10. Click [Open] and type the encrypted password set in step 5.
11. Click [ Next ] and select the device to be imported.
12. Click [Start] and write the file in the MFP.
13. Check that "Normal" is shown in [Status].
14. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
15. Set the authentication user.
16. Dual Scan Document Feeder

## F PERIODICAL MAINTENANCE

## 1. Concept of periodical maintenance

- Cleaning/replacement cycle for each maintenance item of main body/options can be evaluated with the total counter or each life counter value of [Service Mode] -> [Counter] -> [Life].

## 2. Periodical maintenance items

### 2.1 Main unit (bizhub C368/C308/C258)

2.1.1 bizhub C368
(1) Periodical maintenance 1 (Total counter; every 60,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | $\bullet$ |  |  |
| 2 |  | Appearance | - | $\bullet$ | $\bullet$ |  |  |
| 3 | Conveyance section | Registration roller | - | $\bullet$ |  |  |  |
| 4 | Image transfer section | Around waste toner port | - | $\bullet$ |  |  |  |
| 5 | Duplex section | Duplex transport roller | - | $\bullet$ |  |  |  |

(2) Periodical maintenance 2 (Field standard yield; every 90,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Processing section | Drum unit/Y,M,C | 1 |  |  | $\bullet$ |  |

(3) Periodical maintenance 3 (Field standard yield; every 120,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Processing section | Drum unit/K | 1 |  |  | $\bullet$ |  |

(4) Periodical maintenance 4 (Life counter; every 200,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Manual bypass tray feed roller | 1 |  |  | $\bullet$ |  |
|  |  | Manual bypass tray separation roller assy | 1 |  |  | $\bullet$ |  |

(5) Periodical maintenance 5 (Life counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Tray 1 pick-up roller | 1 |  |  | $\bullet$ |  |
| 2 |  | Tray 1 feed roller | 1 |  |  | $\bullet$ |  |
| 3 |  | Tray 1 separation roller | 1 |  |  | $\bullet$ |  |
| 4 |  | Tray 2 pick-up roller | 1 |  |  | $\bullet$ |  |
| 5 |  | Tray 2 feed roller | 1 |  |  | $\bullet$ |  |
| 6 |  | Tray 2 separation roller | 1 |  |  | $\bullet$ |  |

(6) Periodical maintenance 6 (Field standard yield; every 300,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Transfer section | Transfer Belt Unit | 1 |  |  | - |  |
| 2 |  | Transfer roller unit | 1 |  |  | - |  |

(7) Periodical maintenance 7 (Field standard yield; every 600,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| 1 | Processing section | Developing unit/Y,M,C,K | 1 |  |  | $\bullet$ |  |
| 2 | Fusing section | Fusing unit | 1 |  |  | $\bullet$ |  |

### 2.1.2 bizhub C308

(1) Periodical maintenance 1 (Total counter; every 60,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | $\bullet$ |  |  |
|  |  | Appearance | - | $\bullet$ | $\bullet$ |  |  |
| 2 |  | Conveyance section | Registration roller | - | $\bullet$ |  |  |
| 4 | Image transfer section | Around waste toner port | - | $\bullet$ |  |  |  |
| 5 | Duplex section | Duplex transport roller | - | $\bullet$ |  |  |  |

(2) Periodical maintenance 2 (Field standard yield; every $\mathbf{7 5 , 0 0 0}$ sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :---: | :--- | :---: | :---: | :---: | :---: | :---: |
| 1 | Processing section | Drum unit/Y,M,C | 1 |  |  |  |  |

(3) Periodical maintenance 3 (Field standard yield; every 120,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Processing section | Drum unit/K | 1 |  |  | $\bullet$ |  |

(4) Periodical maintenance 4 (Life counter; every 200,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Manual bypass tray feed roller | 1 |  |  | - |  |
| 2 |  | Manual bypass tray separation roller assy | 1 |  |  | - |  |

(5) Periodical maintenance 5 (Life counter; every 300,000 counts)

### 2.2.4 Dual scan document feeder

(1) Periodical maintenance 1 (total counter; every 50,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Paper feed section | Pick-up roller | - | - |  |  |  |  |
| 4 |  | Feed roller | - | - |  |  |  |  |
| 5 |  | Separation roller | - | - |  |  |  |  |

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: |
| 6 | Conveyance section | Rollers and rolls | - | $\bullet$ |  |  |  |  |
| 7 | Scanning section | Front side scanning guide | - | $\bullet$ |  |  |  |  |
| 8 | Paper feed section | Reflective sensor section | - | $\bullet$ |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 200,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Pick-up roller | 2 |  |  |  | - |  |
| 2 |  | Feed roller | 1 |  |  |  | - |  |
| 3 |  | Separation roller | 1 |  |  |  | - |  |
| 4 |  | Torque limiter | - | - |  |  |  |  |

- *: Replace these parts at the same time.

### 2.3 Option (bizhub C368/C308/C258)

### 2.3.1 DF-704

(1) Periodical maintenance 1 (total counter; every 50,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Paper feed section | Pick-up roller | - | - |  |  |  |  |
| 4 |  | Feed roller | - | - |  |  |  |  |
| 5 |  | Separation roller | - | - |  |  |  |  |
| 6 | Conveyance section | Rollers and rolls | - | - |  |  |  |  |
| 7 | Scanning section | Front side scanning guide | - | - |  |  |  |  |
| 8 | Paper feed section, Conveyance section | Reflective sensor section | - | - |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 200,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Pick-up roller | 2 |  |  |  | - |  |
| 2 |  | Feed roller | 1 |  |  |  | $\bigcirc$ |  |
| 3 |  | Separation roller assy | 1 |  |  |  | - |  |

*: Replace those three parts at the same time.

### 2.3.2 DF-629

(1) Periodical maintenance 1 (total counter; every 50,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Paper feed section | Pick-up roller | - | - |  |  |  |  |
| 4 |  | Feed roller | - | - |  |  |  |  |
| 5 |  | Separation roller | - | - |  |  |  |  |
| 6 | Conveyance section | Rollers and rolls | - | - |  |  |  |  |
| 7 | Scanning section | Scanning guide | - | - |  |  |  |  |
| 8 | Paper feed section, Conveyance section | Reflective sensor section | - | $\bigcirc$ |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 200,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Pick-up roller | 2 |  |  |  | - | * |
| 2 |  | Feed roller | 1 |  |  |  | - |  |
| 3 |  | Separation roller assy | 1 |  |  |  | - |  |

[^10]
### 2.3.3 PC-110/PC-410

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Paper feed section | Pick-up roller | 1 |  |  |  | - | * |
| 4 |  | Feed roller | 1 |  |  |  | - |  |
| 5 |  | Separation roller | 1 |  |  |  | - |  |

*: Replace those three parts at the same time.

### 2.3.4 PC-210

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Paper feed section | Pick-up roller | 2 |  |  |  | - | * |
| 4 |  | Feed roller | 2 |  |  |  | - |  |
| 5 |  | Separation roller | 2 |  |  |  | - |  |

*: Replace those three parts at the same time.

### 2.3.5 LU-302

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Pick-up roller | 1 |  |  |  | - |  |
| 2 |  | Feed roller | 1 |  |  |  | - |  |
| 3 |  | Separation roller | 1 |  |  |  | - |  |

- *: Replace those three parts at the same time.

### 2.3.6 FS-534

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Conveyance section | Roller and rolls | - | - |  |  |  |  |
| 4 |  | Paddle | 6 | - |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 2,000,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Conveyance section | Paddle unit | 3 |  |  |  |  | - |

### 2.3.7 FS-534SD

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Conveyance section (Finisher) | Roller and rolls | - | $\bigcirc$ |  |  |  |  |
| 4 |  | Paddle | 6 | - |  |  |  |  |
| 5 | Conveyance section (saddle unit) | Duplex transport roller | - | - |  |  |  |  |
| 6 |  | Upper paddle | 4 | - |  |  |  |  |
| 7 |  | Lower paddle | 8 | - |  |  |  |  |
| 8 | Folding section | Folding roller | - | - |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 2,000,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Conveyance section <br> (Finisher) | Paddle unit | 3 |  |  |  |  |  |

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | Conveyance section (saddle unit) | Upper paddle assy | 1 |  |  |  | - |  |
| 3 |  | Lower paddle unit | 4 |  |  |  | - |  |

### 2.3.8 FS-533

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Conveyance section | Roller and rolls | - | - |  |  |  |  |
| 4 | Paper exit section | Paddle | 4 | $\bigcirc$ |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 1,000,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Alignment section | Alignment roller assy/ F | 1 |  |  |  | - | * |
| 2 |  | Alignment roller assy/ R | 1 |  |  |  | - |  |

*: Replace those three parts at the same time.

### 2.4 Option (bizhub C658/C558/C458)

### 2.4.1 PC-115/PC-415

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Paper feed section | Pick-up roller | 1 |  |  |  | - | * |
| 4 |  | Feed roller | 1 |  |  |  | $\bullet$ |  |
| 5 |  | Separation roller | 1 |  |  |  | - |  |

- *: Replace those three parts at the same time.

### 2.4.2 PC-215

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Paper feed section | Pick-up roller | 2 |  |  |  | - | * |
| 4 |  | Feed roller | 2 |  |  |  | - |  |
| 5 |  | Separation roller | 2 |  |  |  | - |  |

- *: Replace those three parts at the same time.

### 2.4.3 LU-207/LU-302

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Pick-up roller | 1 |  |  |  | - | * |
| 2 |  | Feed roller | 1 |  |  |  | - |  |
| 3 |  | Separation roller | 1 |  |  |  | - |  |

- *: Replace those three parts at the same time.

### 2.4.4 FS-537

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | $\bullet$ |  |  |  |
| 2 |  | Appearance | - | $\bullet$ | $\bullet$ |  |  |  |
| 3 | Conveyance section | Roller and rolls | - | $\bullet$ |  |  |  |  |
|  | Paddle | 6 | $\bullet$ |  |  |  |  |  |
| 4 |  | Sensor section | FNS entrance sensor (PS34) | 1 | $\bullet$ |  |  |  |

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 |  | FNS middle sensor (PS36) | 1 | - |  |  |  |  |
| 7 |  | Main tray exit sensor (PS37) | 1 | - |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 2,000,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Conveyance section | Paddle | 2 |  |  |  |  | - |

### 2.4.5 FS-537SD

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Conveyance section (Finisher) | Roller and rolls | - | - |  |  |  |  |
| 4 |  | Paddle | 6 | - |  |  |  |  |
| 5 | Conveyance section (Saddle unit) | Conveyance roller | - | - |  |  |  |  |
| 6 |  | Upper paddle | 4 | - |  |  |  |  |
| 7 |  | Lower paddle | 8 | - |  |  |  |  |
| 8 | Sensor unit (Finisher) | FNS entrance sensor (PS34) | 1 | - |  |  |  |  |
| 9 |  | FNS middle sensor (PS36) | 1 | - |  |  |  |  |
| 10 |  | Main tray exit sensor (PS37) | 1 | - |  |  |  |  |
| 11 | Folding section (Saddle unit) | Folding roller | - | - |  |  |  |  |
| 12 | Exit section (Saddle unit) | Exit tray conveyance belt | 2 | $\bigcirc$ |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every $2,000,000$ counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Conveyance section <br> (Finisher) | Paddle | 2 |  |  |  |  | $\bullet$ |
| 2 | Conveyance section <br> (Saddle unit) | Upper paddle | 1 |  |  |  |  |  |
| 3 | Lower paddle | 4 |  |  |  | $\bullet$ |  |  |

### 2.4.6 ZU-609

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 | Z folding section | Folding roller | - | - |  |  |  |  |
| 3 |  | Folding guide | - | - |  |  |  |  |

### 2.4.7 JS-602

(1) Periodical maintenance (total counter; every $\mathbf{1 0 0 , 0 0 0}$ sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Conveyance section | Conveyance roller | - | - |  |  |  |  |
| 4 | Paper exit section | Paper exit roller | - | - |  |  |  |  |

### 2.4.8 PI-507

(1) Periodical maintenance 1 (total counter; every 100,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | $\bullet$ | - |  |  |  |
| 3 | Paper feed section | Feed roller | - | - |  |  |  |  |
| 4 |  | Separation roller | - | - |  |  |  |  |
| 5 |  | Pick-up roller | - | - |  |  |  |  |

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | Conveyance section | Paper exit roller | - | - |  |  |  |  |

(2) Periodical maintenance 2 (Parts Counter (fixed); every 100,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Feed roller /Lw | 1 |  |  |  | - |  |
| 2 |  | Separation roller /Lw | 1 |  |  |  | - |  |

(3) Periodical maintenance 3 (Parts Counter (fixed); every 200,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Pick-up roller / Lw | 1 |  |  |  |  | - |

(4) Periodical maintenance 4 (Parts Counter (fixed); every 600,000 sheets)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Paper feed section | Torque limiter/Lw | 1 |  |  |  |  | - |

### 2.4.9 FS-536

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Conveyance section | Roller and rolls | - | - |  |  |  |  |
| 4 |  | Paddle | 9 | - |  |  |  |  |
| 5 | Sensor section | FNS entrance sensor (PS4) | 1 | - |  |  |  |  |
| 6 |  | Main tray exit sensor (PS16) | 1 | - |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 2,000,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Conveyance section | Paddle | 3 |  |  |  |  | - |  |

### 2.4.10 FS-536SD

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | - |  |  |  |
| 2 |  | Appearance | - | - | - |  |  |  |
| 3 | Conveyance section (Finisher) | Roller and rolls | - | - |  |  |  |  |
| 4 |  | Paddle | 9 | - |  |  |  |  |
| 5 | Conveyance section (Saddle unit) | Conveyance roller | - | - |  |  |  |  |
| 6 |  | Upper paddle | 4 | - |  |  |  |  |
| 7 |  | Lower paddle | 8 | $\bigcirc$ |  |  |  |  |
| 8 | Sensor section (Finisher) | FNS entrance sensor (PS4) | 1 | - |  |  |  |  |
| 9 |  | Main tray exit sensor (PS16) | 1 | - |  |  |  |  |
| 10 | Folding section (Saddle unit) | Folding roller | - | - |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 2,000,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Conveyance section (Finisher) | Paddle | 3 |  |  |  | - |  |
| 2 | Conveyance section (Saddle unit) | Upper paddle | 1 |  |  |  | - |  |
| 3 |  | Lower paddle | 4 |  |  |  | - |  |

### 2.4.11 FS-533 (C558/C458 only)

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Overall | Paper feed and image conditions | - |  | $\bullet$ |  |  |  |

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 2 |  | Appearance | - | $\bullet$ | $\bullet$ |  |  |  |
| 3 | Conveyance section | Roller and rolls | - | $\bullet$ |  |  |  |  |
| 4 | Paper exit section | Paddle | 4 | $\bullet$ |  |  |  |  |

(2) Periodical maintenance 2 (life counter; every 1,000,000 counts)

| No. | Section | Description/part name | Qt. | Clean | Check | Lubrication | Replace | Descriptions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Alignment section | Alignment roller assy/ F | 1 |  |  |  | - | * |
| 2 |  | Alignment roller assy/ R | 1 |  |  |  | - |  |

- *: Replace those three parts at the same time.

## 3. Periodical replacement parts list

## 3.1 bizhub C368/C308/C258

| Classification | Parts name |  | Parts No. | Qt. | Replacing cycle | Descr iption s | Ref. page |

## 6. Concept of consumable/part replacement time

### 6.1 Consumable/part replacement time (bizhub C368/C308/C258)

- The replacement time for each consumable and part is available from [Service Mode] -> [Counter] -> [Life].
- The replacement time means the standard replacement time when prints are made under the conditions as defined in the another section, Specified conditions for replacement time. The actual replacement time may vary depending on how the machine is used and the environment.
- "M" refers to the rotation time of each unit.

| Consumables/parts name | Target model | Field standard yield *1 | Replacement time *2 | Life stop *2 |
| :---: | :---: | :---: | :---: | :---: |
| Drum unit (C/M/Y) | C368 | 90,000 sheets | 5730M | 6876M |
|  | C308 | 75,000 sheets | 6539M | 7847M |
|  | C258 | 55,000 sheets | 6539M | 7847M |
| Drum unit (K) (DR313K) | C368 | 120,000 sheets | 5730M | 6876M |
|  | C308 | 120,000 sheets | 6539M | 7847M |
|  | C258 | 90,000 sheets | 6539M | 7847M |
| Drum unit (K) (DR315K) | C368 | 225,000 sheets | 10714M | 12857M |
|  | C308 | 225,000 sheets | 12226M | 14672M |
|  | C258 | 170,000 sheets | 12226M | 14672M |
| Developing Unit | C368 | 600,000 sheets | 600,000 counts | 610,000 counts |
|  | C308 | 600,000 sheets | 600,000 counts | 610,000 counts |
|  | C258 | 600,000 sheets | 600,000 counts | 610,000 counts |
| Transfer Belt Unit | C368 | 300,000 sheets | 22088M | 24096M |
|  | C308 | 300,000 sheets | 26960M | 29411M |
|  | C258 | 300,000 sheets | 26960M | 29411M |
| Transfer roller | C368 | 300,000 sheets | 22088M | 24096M |
|  | C308 | 300,000 sheets | 26960M | 29411M |
|  | C258 | 300,000 sheets | 26960M | 29411M |
| Fusing Unit | C368 | 600,000 sheets | 600,000 counts | 630,000 counts |
|  | C308 | 600,000 sheets | 600,000 counts | 630,000 counts |
|  | C258 | 600,000 sheets | 600,000 counts | 630,000 counts |

- *1: For details of specified conditions of field standard yield, see "C.1.4 Material".
- *2: The replacement time changes depending on the setting of the replacement timing intelligent control. For details, see I.7.3.9 (3) (y) Replacement timing Intelligent Control of Developing unit

### 6.2 Consumable/part replacement time (bizhub C658/C558/C458)

- The replacement time for each consumable and part is available from [Service Mode] -> [Counter] -> [Life].
- The replacement time means the standard replacement time when prints are made under the conditions as defined in the another section, Specified conditions for replacement time. The actual replacement time may vary depending on how the machine is used and the environment.
- "M" refers to the rotation time of each unit.

| Consumables/parts name | Target model | Destination | Field standard yield *1 | Replacement time *2 | Life stop *2 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Drum unit (C/M/Y) | C658 | - | 105,000 sheets | 3279M | 3931M |
|  | C558 | - | 100,000 sheets | 3770M | 5385M |
|  | C458 | Japan | 85,000 sheets | 4489M | 5385M |
|  |  | North America/Europe | 100,000 sheets |  |  |
| Drum unit (K) (DR313K) | C658 | - | 150,000 sheets | 3279M | 3931M |

|  |  | North America | 1,175,000 sheets |  |  |
|  |  | Europe | 1,200,000 sheets |  |  |
|  | C458 | Japan | 520,000 sheets | 600,000 counts | 630,000 counts |
|  |  | North America | 590,000 sheets |  |  |
|  |  | Europe | 600,000 sheets |  |  |
| Toner filter (C/M/Y) | C658/C558/C458 | - | - | 150,000 sheets | 160,000 sheets |
| Toner filter (K) | C658/C558/C458 | - | - | 300,000 sheets | 315,000 sheets |

- *1: For details of specified conditions of field standard yield, see "C.1.4 Material".
- *2: The replacement time changes depending on the setting of the replacement timing intelligent control. For details, see I.7.3.9 (3) (y) Replacement timing Intelligent Control of Developing unit

### 6.3 Specified condition for replacement time on field standard yield (bizhub C368/C308/C258)

### 6.3.1 Japan

| Items |  | bizhub C368 | bizhub C308 |
| :--- | :--- | :--- | :--- |
| Printing | Color | $1.5 \mathrm{P} / \mathrm{J}$ | $1 \mathrm{P} / \mathrm{J}$ |
|  | Black | $4 \mathrm{P} / \mathrm{J}$ | $3 \mathrm{P} / \mathrm{J}$ |
|  | A4S: $40 \%$ | $1 \mathrm{P} / \mathrm{J}$ |  |
| Color ratio | $20 \%$ | $3 \mathrm{P} / \mathrm{J}$ |  |
| Coverage | Each color 5\% |  |  |
| Average print volume/month | 5,800 prints/month | 3,900 prints/month |  |

### 6.3.2 North America

| Items |  | bizhub C368 | bizhub C308 | bizhub C258 |
| :--- | :--- | :--- | :--- | :--- |
| Printing | Color | $2 \mathrm{P} / \mathrm{J}$ | $1.5 \mathrm{P} / \mathrm{J}$ | $1.5 \mathrm{P} / \mathrm{J}$ |
|  | Black | $4 \mathrm{P} / \mathrm{J}$ | $3 \mathrm{P} / \mathrm{J}$ | $3 \mathrm{P} / \mathrm{J}$ |
| Paper size | Letter S: $7 \%$ | $25 \%$ | $25 \%$ |  |
| Color ratio | $30 \%$ | Each color $5 \%$ | 5,300 prints/month | 4,100 prints/month |
| Coverage | 6,800 prints/month |  |  |  |
| Average print volume/month |  |  |  |  |

### 6.3.3 Europe

| Items |  | bizhub C368 | bizhub C308 |
| :--- | :--- | :--- | :--- |
| Printing | Color | $2 \mathrm{P} / \mathrm{J}$ | $2 \mathrm{P} / \mathrm{J}$ |
|  | Black | $4 \mathrm{P} / \mathrm{J}$ | $3 \mathrm{P} / \mathrm{J}$ |
| Paper size | A4S: $7 \%$ | $1.5 \mathrm{P} / \mathrm{J}$ |  |
| Color ratio | $30 \%$ | $3 \mathrm{P} / \mathrm{J}$ |  |
| Original density | Each color $5 \%$ |  |  |
| Average print volume/month | 8,900 prints/month | 6,700 prints/month |  |

### 6.4 Specified condition for replacement time on field standard yield (bizhub C658/C558/C458)

6.4.1 Japan

| Items | bizhub C658 | bizhub C558 | bizhub C458 |  |
| :--- | :--- | :--- | :--- | :--- |
| Printing | Color | 3 P/J | 3 P/J | $2 \mathrm{P} / \mathrm{J}$ |
|  | Black | $7 \mathrm{P} / \mathrm{J}$ | $6 \mathrm{P} / \mathrm{J}$ | $5 \mathrm{P} / \mathrm{J}$ |
| Paper size ratio | A4S: $40 \%$ |  |  |  |
| Color ratio | $20 \%$ | 14,300 | 9400 |  |
| Coverage | Each color $5 \%$ |  |  |  |
| Average print volume (pages/ <br> month) | 17,300 |  |  |  |

### 6.4.2 North America

| Items | bizhub C658 | bizhub C558 | bizhub C458 |  |
| :--- | :--- | :--- | :--- | :--- |
| Printing | Color | 3 P/J | 3 P/J | $2.5 \mathrm{P} / \mathrm{J}$ |
|  | Black | $7 \mathrm{P} / \mathrm{J}$ | $6 \mathrm{P} / \mathrm{J}$ | $5 \mathrm{P} / \mathrm{J}$ |
| Paper size ratio | Letter S: $7 \%$ |  |  |  |
| Color ratio | $33 \%$ | 12,300 | 9300 |  |
| Coverage | Each color 5\% |  |  |  |
| Average print volume (pages/ <br> month) | 14,300 |  |  |  |

### 6.4.3 Europe

| Items |  | bizhub C658 | bizhub C558 | bizhub C458 |
| :--- | :--- | :--- | :--- | :--- |
| Printing | Color | $4 \mathrm{P} / \mathrm{J}$ | $3 \mathrm{P} / \mathrm{J}$ | $2.5 \mathrm{P} / \mathrm{J}$ |
|  | Black | $3 \mathrm{P} / \mathrm{J}$ | $6 \mathrm{P} / \mathrm{J}$ | $5 \mathrm{P} / \mathrm{J}$ |
| Paper size ratio | A4S: $7 \%$ |  |  |  |
| Color ratio | $30 \%$ |  |  |  |
| Coverage | Each color 5\% | 13,900 | 10,500 |  |
| Average print volume (pages/ <br> month) | 16,100 |  |  |  |

7. Periodical maintenance procedure bizhub C368/C308/C258

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 7.1 Photo conductor section

### 7.1.1 Replacing the drum unit

## $\triangle$ CAUTION

- When replacing with the drum unit (DR315K), make sure to install the firmware (ver. G00-V1 or later) beforehand. J. 1 REWRITING OF FIRMWARE

If you replaced with the drum unit (DR315K) without installing the firmware (ver. G00-V1 or later), "Drum Unit Detection Error" will appear.
(1) Periodically replacing parts/cycle

- Drum unit/Y,M,C: Every 90,000 sheets (bizhub C368)
- Drum unit/Y,M,C: Every 75,000 sheets (bizhub C308)
- Drum unit/Y,M,C: Every 55,000 sheets (bizhub C258)
- Drum unit/K (DR313K): Every 120,000 sheets (bizhub C368)
- Drum unit/K (DR313K): Every 120,000 sheets (bizhub C308)
- Drum unit/K (DR313K): Every 90,000 sheets (bizhub C258)
- Drum unit/K (DR315K): Every 225,000 sheets (bizhub C368)
- Drum unit/K (DR315K): Every 225,000 sheets (bizhub C308)
- Drum unit/K (DR315K): Every 170,000 sheets (bizhub C258)

NOTE

- The following shows the procedure for replacing the drum unit/M, but take the same procedure for the drum unit/Y, C, K.
(2) Removal procedure

1. Open the front door.
2. Remove the waste toner box F.7.6.1 Replacing the waste toner box

3. Turn the drum unit lock lever [1] and release the lock

[^12](3) Reinstall procedure

1. Remove the drum unit [1] from its package.
2. Remove the drum unit [1] from the plastic bag.
3. Peel off the tape [1]. NOTE

- Do not hold the drum unit by the upper part. Holding it by the upper part can cause scratches on the surface of the photo conductor, resulting in the deterioration of image quality.

4. Put the label. (Drum unit/Y,M,C only)
5. Align the " $\boldsymbol{\Delta}$ " mark on the drum unit with the " $\boldsymbol{\nabla}$ " mark on the machine and insert the drum unit [1] into the machine.
6. Remove the photo conductor protective sheet [1].
7. Completely insert the drum unit [1].
[1]

8. Turn the drum unit lock lever [1] and lock the drum unit. NOTE

- If the lock lever is hard to rotate, turn the lever while pushing the drum unit to the rear.

9. Reinstall the waste toner box.
10. Close the front door.
11. Select [Service Mode] -> [Imaging Process Adjustment] -> [Gradation Adjust] and carry out gradation adjust.

### 7.2 Developing section

### 7.2.1 Replacing the developing unit

(1) Periodically replacing parts/cycle

- Developing unit : Every 600,000 (bizhub C368)
- Developing unit : Every 600,000 (bizhub C308)
- Developing unit : Every 600,000 (bizhub C258)

## NOTE

- Although the procedure shown below is for the replacement of the developing unit/Y, use the same procedure to replace other developing units.

## (2) Procedure

1. Open the front door.
2. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box
3. Remove the front lower cover.
G.5.2.14 Front lower cover
4. Remove the drum unit/Y.
F.7.1.1 Replacing the drum unit
[1]

[2]

## [1]

5. Remove the harness from the wire saddle [1], and disconnect the connector [2].
6. Remove two screws [1], and remove the developing unit [2].
7. To reinstall, reverse the order of removal. NOTE

- To install the two screws in the developing unit, press the position [1] with your finger as shown in the illustration.

[^13]
### 7.3 Toner supply section

### 7.3.1 Replacing the toner cartridge

(1) Periodically replacing parts/cycle

- Toner cartridge/Y,M,C : Every 25,000 prints (bizhub C368)
- Toner cartridge/Y,M,C : Every 25,000 prints (bizhub C308)
- Toner cartridge/Y,M,C : Every 25,000 prints (bizhub C258)
- Toner cartridge/K : Every 27,000 prints (bizhub C368)
- Toner cartridge/K : Every 27,000 prints (bizhub C308)
- Toner cartridge/K : Every 27,000 prints (bizhub C258)

## (2) Removal procedure

1. Open the front door.

(3) Reinstall procedure

2. Remove the new toner cartridge [1] from its packaging, and the shake the cartridge side to side 5 to 10 times. NOTE

- Shake the toner cartridge well.

If shaking is not enough, that may cause trouble.
2. Insert the toner cartridge [1] into the machine. NOTE

- Make sure that the toner cartridge is the same color as the label in the cartridge compartment.
- Make sure that the blue label position of the toner cartridge is matched with the one of the machine side.

3. Completely insert the toner cartridge into the machine and turn it in the direction as shown in the illustration in order to fix the toner cartridge.

### 7.4 1st transfer section

### 7.4.1 Cleaning of the image transfer entrance guide

(1) Periodically cleaning parts/cycle

- Image transfer entrance guide: Every 240,000 counts or when the transfer belt unit is replaced.
(2) Procedure

1. Remove the transfer belt unit
F.7.4.3 Replacing the transfer belt unit

## [1]

2. Wipe the image transfer entrance guide [1] clean of spilled toner and dirt using a cleaning pad with water or alcohol.

### 7.4.2 Cleaning of the IDC sensor window

(1) Periodically cleaning parts/cycle

- IDC sensor window: Every 240,000 counts or when the transfer belt unit is replaced.

## (2) Procedure

1. Remove the transfer belt unit.
F.7.4.3 Replacing the transfer belt unit

2. Wipe the surface of the IDC sensor window [1] clean of spilled toner and dirt. NOTE - Do not wipe out with any solvents or alcohols.

### 7.4.3 Replacing the transfer belt unit

(1) Periodically replacing parts/cycle

- Transfer belt unit : Every 300,000 sheets (bizhub C368)
- Transfer belt unit : Every 300,000 sheets (bizhub C308)
- Transfer belt unit : Every 300,000 sheets (bizhub C258)

NOTE

- Before replacement operations of the transfer belt unit, make sure to turn OFF the main power switch.
(2) Removal procedure

1. Remove the waste toner box. F.7.6.1 Replacing the waste toner box
2. Open the right door and the regist unit.

[2]
[2]

[1]
3. Remove the screw [1] and two tabs [2], and remove the 2nd transfer paper winding prevention guide [3].
4. Remove the screw [1], and remove the stopper [2].

## [2]

[1]
5. Remove two screws [1] and unlock the transfer belt unit [2].
6. Hold the both sides and lift it to take out the transfer belt unit [1] a little.
7. Hold the position [1] and remove the transfer belt unit [2]. NOTE

- Do not touch the surface of the transfer belt unit.
- Cover the transfer belt unit with something such shade cloth to protect its surface from dust or foreign matter.
- If accidentally touched the surface of the transfer belt, lightly wipe it using the Hydro-wipe (65AA-99\#\#). Do not clean with alcohol or water.

1. Insert the transfer belt unit [1]. NOTE

- Insert the transfer belt unit with care not to allow its docking gear to be damaged by hitting it against the rail or associated part.
- Do not touch the surface of the transfer belt unit.
- Cover the transfer belt unit with something such shade cloth to protect its surface from dust or foreign matter.
- If accidentally touched the surface of the transfer belt, lightly wipe it using the Hydro-wipe (65AA-99\#\#). Do not clean with alcohol or water.

2. Install the transfer belt unit [2] with two screws [1].
3. Install the 2nd transfer paper winding prevention guide.

[1]
4. To reinstall, reverse the order of removal.
5. Turn ON the main power switch.
6. Carry out the [Service Mode] -> [Counter] -> [Life] -> [New Release].
7. Carry out the [Service Mode] -> [Image Process Adjustment] -> [Gradation Adjust].

### 7.5 2nd transfer/separation section

### 7.5.1 Replacing the transfer roller unit

(1) Periodically replacing parts/cycle

- Transfer roller unit : Every 300,000 sheets (bizhub C368)
- Transfer roller unit : Every 300,000 sheets (bizhub C308)
- Transfer roller unit : Every 300,000 sheets (bizhub C258)
(2) Removal procedure

1. Open the right door and the regist unit.

2. Unlock the lock levers [1] of the transfer roller unit (at two places).
[1]
(3) Reinstall procedure

3. Holding onto the lock levers [1] (at two places), mount the new transfer roller unit [2].
4. Lock the lock levers [1] (at two places). NOTE

- Make sure that the levers are locked in position both at front and rear.

### 7.6 Toner collection section

### 7.6.1 Replacing the waste toner box

(1) Periodically replacing parts/cycle

- Waste toner box: Every 33,000 counts (bizhub C368)
- Waste toner box: Every 30,000 counts (bizhub C308)
- Waste toner box: Every 30,000 counts (bizhub C258)
(2) Removal procedure

1. Open the front door.

2. Unhook the waste toner box fixing levers [1] and remove the waste toner box [2].
3. Take out the cap [1] from the new waste toner box package, and attach it to the old waste toner box. NOTE

- After removing the Waste Toner Box, quickly install the cap. If the Waste Toner Box is tilted, waste toner may spill.
(3) Reinstall procedure

3. Close the front door.
4. Remove the brand new waste toner box from its package and remove the packing material.
5. Set the waste toner box [1].
7.6.2 Cleaning of the area around the waste toner collecting port
(1) Periodically cleaning parts/cycle

- Area around the waste toner collecting port: Every 60,000 counts (upon each call)

## (2) Procedure

1. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box

2. Wipe the areas around the waste toner collecting port clean of spilled toner and dirt using a cleaning pad with water or alcohol.

### 7.7 Paper feed section

### 7.7.1 Replacing the tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller

(1) Periodically replacing parts/cycle

- Tray 1 feed roller: Every 300,000 counts
- Tray 1 pick-up roller: Every 300,000 counts
- Tray 1 separation roller: Every 300,000 counts
(2) Procedure

1. Open the right door.
2. Remove the tray 1. G.5.2.23 Tray 1
3. Remove the tray 2. G.5.2.24 Tray 2

4. Remove the C-clip [1] each, and remove the tray 1 feed roller [2], tray 1 pickup roller [3] and tray 1 separation roller [4].
5. To reinstall, reverse the order of removal.
6. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [1st.].

### 7.7.2 Replacing the tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller

(1) Periodically replacing parts/cycle

- Tray 2 feed roller: Every 300,000 counts
- Tray 2 pick-up roller: Every 300,000 counts
- Tray 2 separation roller: Every 300,000 counts
(2) Procedure

1. Open the right door
2. Remove the tray 1. G.5.2.23 Tray 1
3. Remove the tray 2.
G.5.2.24 Tray 2

4. Remove the C-clip [1] each, and remove the tray 2 feed roller [2], tray 2 pickup roller [3] and tray 2 separation roller [4].
5. To reinstall, reverse the order of removal.
6. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [2nd.].

### 7.7.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy

(1) Periodically replacing parts/cycle

- Manual bypass tray feed roller: Every 200,000 counts
- Manual bypass tray separation roller assy: Every 200,000 counts
(2) Procedure

1. Open the right door.

[2]
2. Remove the screw [1], and remove the bushing [2] and the metal plate [3].
3. Remove the manual bypass tray feed roller [1].
4. Remove the screw [1], and remove the feed roller cover [2].
e

[1]
5. Remove the screw [1], and remove the cover [2].

[1]

6. Remove the manual bypass tray separation roller unit [1].
7. Remove the C-ring [1], and remove the manual bypass tray separation roller assy [2].
8. To reinstall, reverse the order of removal.
9. Select [Service Mode] -> [Counter] -> [Life ] and clear the count of [Manual Tray].

### 7.8 Registration section

### 7.8.1 Cleaning of the registration roller

(1) Periodically cleaning parts/cycle

- Registration roller: Every 60,000 counts (upon each call)
(2) Procedure

1. Open the right door and the regist unit.
[1]

### 7.9 Fusing section

7.9.1 Replacing the fusing unit

## $\triangle$ CAUTION

## - The temperature gets high in the vicinity of the fusing unit. You may get burned when you come into contact with the area.

Before replacement operations, make sure that more than 20 minutes have elapsed since the main power switch was turned off.
(1) Periodically replacing parts/cycle

- Fusing unit: Every 600,000 (bizhub C368)
- Fusing unit: Every 600,000 (bizhub C308)
- Fusing unit: Every 600,000 (bizhub C258)
(2) Procedure

1. Open the right door and the regist unit.

[3]

2. Remove the screw [1] each, and remove the two connector protective covers [2].
3. Remove the harness from the wire saddle [1].
4. Disconnect three connectors [2]
5. Disconnect the connector [3] NOTE

- When removing the connector [3], press the claw to release the lock, then remove it.

6. Remove two screws [1], and remove the fusing unit [2] NOTE

- When removing the fusing unit, hold the parts [3] shown on the picture so that it would not fall.
- When installing the fusing unit, make sure that the set pin [4] is inserted in the fusing unit.

7. To reinstall, reverse the order of removal.
8. Carry out the [Service Mode] -> [Counter] -> [Life] -> [New Release].

### 7.10 Duplex section

7.10.1 Cleaning of the duplex transport rollers
(1) Periodically cleaning parts/cycle

- Duplex transport rollers: Every 60,000 counts (upon each call)

## (2) Procedure

1. Open the right door.

[1]
2. Using a cleaning pad with water or alcohol, wipe the duplex transport rollers [1] clean of dirt.
3. Periodical maintenance procedure bizhub C658/C558/C458

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 8.1 Housing section

### 8.1.1 Replacing the toner filter

(1) Periodically replacing parts/cycle

- Toner filter: Every 300,000 sheets (bizhub C658)
- Toner filter: Every 300,000 sheets (bizhub C558)
- Toner filter: Every 300,000 sheets (bizhub C458)
* The transfer roller unit is supplied with the transfer belt unit, and these are replaced at the same time.
(2) Procedure

1. Squeeze the hooks and remove the toner filter [1].

[1]
2. To reinstall, reverse the order of removal.

### 8.2 Photo conductor section

8.2.1 Replacing the drum unit

- When replacing with the drum unit (DR315K), make sure to install the firmware (ver. G00-V1 or later) beforehand. J. 1 REWRITING OF FIRMWARE

If you replaced with the drum unit (DR315K) without installing the firmware (ver. G00-V1 or later), "Drum Unit Detection Error" will appear.
(1) Periodically replacing parts/cycle

- Drum unit/Y, M, C: Every 105,000 sheets (bizhub C658)
- Drum unit/Y, M, C: Every 100,000 sheets (bizhub C558)
- Drum unit/Y, M, C: Every 85,000 sheets (bizhub C458-Japan)
- Drum unit/Y, M, C: Every 100,000 sheets (bizhub C458-outside Japan)
- Drum unit/K (DR313K): Every 150,000 sheets (bizhub C658)
- Drum unit/K (DR313K): Every 140,000 sheets (bizhub C558)
- Drum unit/K (DR313K): Every 135,000 sheets (bizhub C458)
- Drum unit/K (DR315K): Every 266,000 sheets (bizhub C658)
- Drum unit/K (DR315K): Every 251,000 sheets (bizhub C558)
- Drum unit/K (DR315K): Every 242,000 sheets (bizhub C458) NOTE
- The following shows the procedure for replacing the drum unit/M, but take the same procedure for the drum unit/Y, C, K.
(2) Removal procedure

1. Open the lower front door.
2. Remove the waste toner box. F.8.7.1 Replacing the waste toner box

[1]

## (3) Reinstall procedure

1. Remove the drum unit [1] from its package.
2. Remove the drum unit [1] from the plastic bag.
3. Peel off the tape [1]. NOTE

- Do not hold the drum unit by the upper part. Holding it by the upper part can cause scratches on the surface of the photo conductor, resulting in the deterioration of image quality.

3. Turn the drum unit lock lever [1] and release the lock.
4. Pull the drum unit [1] to you and remove it from the machine.

[1]

5. Put the label. (Drum Unit/Y, M, C only)
6. Align the " $\boldsymbol{\Delta}$ " mark on the drum unit with the " $\boldsymbol{\nabla}$ " mark on the machine and insert the drum unit [1] into the machine.

7. Remove the photo conductor protective sheet [1].
8. Completely insert the drum unit [1].
9. Turn the drum unit lock lever [1] and lock the drum unit. NOTE

- If the lock lever is hard to rotate, turn the lever while pushing the drum unit to the rear.

9. Reinstall the waste toner box.
10. Close the lower front door.
11. Select [Service Mode] -> [Imaging Process Adjustment] -> [Gradation Adjust] and carry out gradation adjust.

### 8.3 Developing section

### 8.3.1 Replacing the developing unit

(1) Periodically replacing parts/cycle

- Developing unit: Every 595,000 sheets (bizhub C658-Japan)
- Developing unit: Every 590,000 sheets (bizhub C658-North America)
- Developing unit: Every 600,000 sheets (bizhub C658-Europe)
- Developing unit: Every 595,000 sheets (bizhub C558-Japan)
- Developing unit: Every 590,000 sheets (bizhub C558 - North America)
- Developing unit: Every 600,000 sheets (bizhub C558-Europe)
- Developing unit: Every 580,000 sheets (bizhub C458-Japan)
- Developing unit: Every 590,000 sheets (bizhub C458 - North America)
- Developing unit: Every 600,000 sheets (bizhub C458-Europe)

## NOTE

- Although the procedure shown below is for the replacement of the developing unit/Y, use the same procedure to replace other developing units.

## (2) Procedure

1. Open the lower front door.
2. Remove the waste toner box.
F.8.7.1 Replacing the waste toner box
3. Remove the front lower cover.
G.6.2.14 Front lower cover
4. Remove the drum unit/Y.
F.8.2.1 Replacing the drum unit

5. Remove the harness from the wire saddle [1], and disconnect the connector [2].
6. Remove two screws [1], and remove the developing unit [2].
7. To reinstall, reverse the order of removal. NOTE

- To install two screws in the developing unit, press the position [1] with your finger as shown in the illustration.

8. Carry out the [Service Mode] -> [Image Process Adjustment] -> [Gradation Adjust].

### 8.4 Toner supply section

### 8.4.1 Replacing the toner cartridge

(1) Periodically replacing parts/cycle

- Toner cartridge/Y, M, C: Every 26,000 sheets (bizhub C658)
- Toner cartridge/Y, M, C: Every 26,000 sheets (bizhub C558)
- Toner cartridge/Y, M, C: Every 26,000 sheets (bizhub C458)
- Toner cartridge/K: Every 28,000 sheets (bizhub C658)
- Toner cartridge/K: Every 28,000 sheets (bizhub C558)
- Toner cartridge/K: Every 28,000 sheets (bizhub C458)
(2) Removal procedure

1. Open the upper front door.
[2]

2. Turn the toner cartridge [1] in the direction [2] as shown in the illustration to release the lock.
3. Remove the toner cartridge [1].
(3) Reinstall procedure

4. Remove the new toner cartridge [1] from its packaging, and the shake the cartridge side to side 5 to 10 times. NOTE

- Shake the toner cartridge well.

If shaking is not enough, that may cause trouble.
2. Insert the toner cartridge [1] into the machine. NOTE

- Make sure that the toner cartridge is the same color as the label in the cartridge compartment.
- Make sure that the blue label position of the toner cartridge is matched with the one of the machine side.

3. Completely insert the toner cartridge into the machine and turn it in the direction as shown in the illustration in order to fix the toner cartridge.

### 8.5 1st transfer section

### 8.5.1 Cleaning of the image transfer entrance guide

(1) Periodically cleaning parts/cycle

- Image transfer entrance guide: Every 240,000 counts or when the transfer belt unit is replaced.
(2) Procedure

1. Remove the transfer belt unit. F.8.5.3 Replacing the transfer belt unit

2. Wipe the image transfer entrance guide [1] clean of spilled toner and dirt using a cleaning pad with water or alcohol.

### 8.5.2 Cleaning of the IDC sensor window

(1) Periodically cleaning parts/cycle

- IDC sensor window: Every 240,000 counts or when the transfer belt unit is replaced.
(2) Procedure

1. Remove the transfer belt unit.
F.8.5.3 Replacing the transfer belt unit

2. Wipe out the IDC sensor window [1] NOTE

- Do not wipe out with any solvents or alcohols.

### 8.5.3 Replacing the transfer belt unit

(1) Periodically replacing parts/cycle

- Transfer belt unit: Every 300,000 sheets (bizhub C658)
- Transfer belt unit: Every 300,000 sheets (bizhub C558)
- Transfer belt unit: Every 300,000 sheets (bizhub C458)

NOTE

- Before replacement operations of the transfer belt unit, make sure to turn OFF the main power switch.

## (2) Removal procedure

1. Open the right door and the regist unit.
[2]

[1]
[2]

[1]
[2]

[1]
2. Release three tabs [1], and remove the 2nd transfer paper winding prevention guide [2].
3. Remove the screw [1], and remove the stopper [2].
4. Remove two screws [1] and unlock the transfer belt unit [2].
5. Hold the both sides and lift it to take out the transfer belt unit [1] a little.

[1]
[1]

[2]
6. Hold the position [1] and remove the transfer belt unit [2]. NOTE

- Do not touch the surface of the transfer belt unit.
- Cover the transfer belt unit with something such shade cloth to protect its surface from dust or foreign matter.
- If accidentally touched the surface of the transfer belt, lightly wipe it using the Hydro-wipe (65AA-99\#\#). Do not clean with alcohol or water.

1. Insert the transfer belt unit [1]. NOTE

- Insert the transfer belt unit with care not to allow its docking gear to be damaged by hitting it against the rail or associated part.
- Do not touch the surface of the transfer belt unit.
- Cover the transfer belt unit with something such shade cloth to protect its surface from dust or foreign matter.
- If accidentally touched the surface of the transfer belt, lightly wipe it using the Hydro-wipe (65AA-99\#\#). Do not clean with alcohol or water.

2. Install the transfer belt unit [2] with two screws [1]. NOTE

- Make sure to also replace the transfer roller unit, and toner filter bundled with the transfer belt unit.

3. Install the $2 n d$ transfer paper winding prevention guide.
4. To reinstall, reverse the order of removal.
5. Turn ON the main power switch.
6. [Service Mode] -> [Counter] -> [Life] -> [New Release]. Then, carry out manual bypass tray width adjustment.
7. Carry out the [Service Mode] -> [Imaging Process Adjustment] -> [Gradation Adjust].

### 8.6 2nd transfer/separation section

### 8.6.1 Replacing the transfer roller unit

(1) Periodically replacing parts/cycle

- Transfer roller unit: Every 300,000 sheets (bizhub C658)
- Transfer roller unit: Every 300,000 sheets (bizhub C558)
- Transfer roller unit: Every 300,000 sheets (bizhub C458)
* The transfer roller unit is supplied with the transfer belt unit, and these are replaced at the same time.

## (2) Removal procedure

1. Open the right door.
[2]

[1]
2. Unlock the lock levers [1] of the transfer roller unit (at two places).
3. Holding onto the lock levers [1] (at two places), remove the transfer roller unit [2].
4. Holding onto the lock levers [1] (at two places), mount the new transfer roller unit [2].
5. Lock the lock levers [1] (at two places).

NOTE

- Make sure that the levers are locked in position both at front and rear.

### 8.7 Toner collection section

### 8.7.1 Replacing the waste toner box

(1) Periodically replacing parts/cycle

- Waste toner box: Every 40,000 counts
(2) Removal procedure

1. Open the lower front door.

2. Unhook the waste toner box fixing levers [1] and remove the waste toner box [2].
3. Take out the cap [1] from the new waste toner box package, and attach it to the old waste toner box. NOTE

- After removing the Waste Toner Box, quickly install the cap. If the Waste Toner Box is tilted, waste toner may spill.

3. Close the lower front door.
4. Remove the brand new waste toner box from its package and remove the packing material.
5. Set the waste toner box [1].

### 8.7.2 Cleaning of the area around the waste toner collecting port

(1) Periodically cleaning parts/cycle

- Area around the waste toner collecting port: Every 60,000 counts (upon each call)
(2) Procedure

1. Remove the waste toner box.
F.8.7.1 Replacing the waste toner box

2. Wipe the areas around the waste toner collecting port clean of spilled toner and dirt using a cleaning pad with water or alcohol.

### 8.8 Document feed section

### 8.8.1 Replacing the tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller

(1) Periodically replacing parts/cycle

- Tray 1 feed roller: Every 300,000 counts
- Tray 1 pick-up roller: Every 300,000 counts
- Tray 1 separation roller: Every 300,000 counts
(2) Procedure

1. Open the right door.
2. Remove the tray 1.
G.6.2.27 Tray 1
3. Remove the tray 2. G.6.2.28 Tray 2

4. To reinstall, reverse the order of removal.
5. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [1st.].

### 8.8.2 Replacing the tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller

(1) Periodically replacing parts/cycle

- Tray 2 feed roller: Every 300,000 counts
- Tray 2 pick-up roller: Every 300,000 counts
- Tray 2 separation roller: Every 300,000 counts
(2) Procedure

1. Open the right door.
2. Remove the tray 1.
G.6.2.27 Tray 1
3. Remove the tray 2.
G.6.2.28 Tray 2

4. Release the tab [1], and remove the tray 2 feed roller [2]
5. Release the tab [1], and remove the tray 2 pick-up roller [3].
6. Release the tab [1], and remove the tray 2 separation roller [4].
7. To reinstall, reverse the order of removal.
8. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [2nd.].

### 8.8.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy

(1) Periodically replacing parts/cycle

- Manual bypass tray feed roller: Every 200,000 counts
- Manual bypass tray separation roller assy: Every 200,000 counts
(2) Procedure

1. Open the right door.
2. Open the registration unit.

[2]
3. Remove the screw [1], and remove the bushing [2] and the metal plate [3].

[^14]
[1]
6. Remove the screw [1], and remove the cover [2].

[1]

7. Remove the manual bypass tray separation roller unit [1].
8. Remove the C-ring [1], and remove the manual bypass tray separation roller assy [2].
9. To reinstall, reverse the order of removal.
10. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [Manual Tray].

### 8.9 Registration section

### 8.9.1 Cleaning of the registration roller

(1) Periodically cleaning parts/cycle

- Registration roller: Every 60,000 counts (upon each call)
(2) Procedure

1. Open the right door.
[1]

2. Using a cleaning pad with alcohol, wipe the registration roller [1] clean of dirt.

### 8.10 Fusing section

8.10.1 Replacing the fusing unit (bizhub C658/C558)

## - The temperature gets high in the vicinity of the fusing unit. You may get burned when you come into contact with the area.

## Before replacement operations, make sure that more than 20 minutes have elapsed since the main power switch was turned off.

(1) Periodically replacing parts/cycle

- Fusing Unit: Every 1,185,000 sheets (Japan)
- Fusing Unit: Every 1,175,000 sheets (North America)
- Fusing Unit: Every 1,200,000 sheets (Europe)
(2) Procedure

1. Open the right door.
[1]

[2]
[1]

[2]

2. Remove the harness from the wire saddle [1]
3. Disconnect three connectors [2].
4. Remove two screws [1], and remove the fusing unit [2]. NOTE

- When removing the fusing unit, hold the parts [3] shown on the picture so that it would not fall.
- If the fusing unit is difficult to remove, the main power switch was likely turned off while the fusing pressure roller was engaged. To release the fusing pressure roller, turn on the main power switch, wait for the device to warm up, and then turn off the main power switch again.
- When installing the fusing unit, make sure that the set pin [4] is inserted in the fusing unit.

6. Clean the IH coil unit.
7. To reinstall, reverse the order of removal.
8. Carry out the [Service Mode] -> [Counter] -> [Life] -> [New Release]

## - The temperature gets high in the vicinity of the fusing unit. You may get burned when you come into contact with the area.

## Before replacement operations, make sure that more than 20 minutes have elapsed since the main power switch was turned off.

(1) Periodically replacing parts/cycle

- Fusing Unit: Every 520,000 sheets (Japan)
- Fusing Unit: Every 590,000 sheets (North America)
- Fusing Unit: Every 600,000 sheets (Europe)
(2) Procedure

1. Open the right door.

2. Remove the screw [1] each, and remove two connector protective covers [2]
3. Remove the harness from the wire saddle [1].
4. Disconnect three connectors [2].
5. Disconnect the connector [3] NOTE

- When removing the connector [3], press the claw to release the lock, then remove it.

6. Remove two screws [1], and remove the fusing unit [2]. NOTE

- When removing the fusing unit, hold the parts [3] shown on the picture so that it would not fall.
- When installing the fusing unit, make sure that the set pin [4] is inserted in the fusing unit.

7. To reinstall, reverse the order of removal.
8. [Service Mode] -> [Counter] -> [Life] -> [New Release]. Then, carry out manual bypass tray width adjustment.
8.10.3 Cleaning of the IH coil (bizhub C658/C558)
(1) Periodically cleaning parts/cycle

- IH Coil: Every $1,185,000$ sheets (Replace every time the fusing unit is replaced) (Japan)
- IH Coil: Every 1,175,000 sheets (Replace every time the fusing unit is replaced) (North America)
- IH Coil: Every 1,200,000 sheets (Replace every time the fusing unit is replaced) (Europe)

NOTE

- If you continue to use the main unit without cleaning the IH coil, toner and paper dust could accumulate on the IH coil, which could result in image streaks and unevenness in gloss.

## (2) Procedure

1. Remove the fusing unit.
F.8.10.1 Replacing the fusing unit (bizhub C658/C558)

## [1]

2. Use a cleaning pad dampened with alcohol to clean the IH coil [1]. NOTE

- Do not touch or contaminate the heating roller temperature sensor while cleaning the IH coil. If the heating roller temperature sensor is moved, damaged, or contaminated, the heating roller temperature sensor may not detect the heating roller temperature correctly, which would cause the P-32 warning code or other trouble codes to appear.

### 8.11 Duplex section

8.11.1 Cleaning of the duplex transport rollers
(1) Periodically cleaning parts/cycle

- Duplex transport rollers: Every 60,000 counts (upon each call)
(2) Procedure

1. Open the right door.
2. Open the registration unit.

[1]
3. Using a cleaning pad with water or alcohol, wipe the duplex transport rollers [1] clean of dirt.
4. Periodical maintenance procedure dual scan document feeder

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 9.1 Take-up section

### 9.1.1 Cleaning of the pick-up roller/feed roller

(1) Periodically cleaning parts/cycle

- Pick-up roller: Every 50,000 counts
- Feed roller: Every 50,000 counts
(2) Procedure

[2]

[1]

2. Using a cleaning pad with alcohol, wipe the pick-up roller [1]/feed roller [2] clean of dirt.
9.1.2 Cleaning of the separation roller
(1) Periodically cleaning parts/cycle

- Separation roller: Every 50,000 counts
(2) Procedure

> 1. Open the left cover [1].

[1]
[1]

2. Using a cleaning pad with alcohol, wipe the separation roller [1] clean of dirt.

### 9.1.3 Cleaning the torque limiter

(1) Periodically cleaning parts/cycle

- Torque limiter: Every 200,000 counts
(2) Procedure

[1]

### 9.1.4 Replacing the pick-up roller/feed roller

(1) Periodically replacing parts/cycle

- Pick-up roller: Every 200,000 counts
- Feed roller: Every 200,000 counts
(2) Procedure

[1]
[2]

[1]

1. Open the left cover [1].
2. Using a cleaning pad with alcohol, wipe the torque limiter [1] clean of dirt.
3. Open the left cover [1].
4. Release two locks [1], and remove the pick-up/feed roller assy [2].

## [2]

[1]

## [3] <br> [2]

[1]

[2]

8. To reinstall, reverse the order of removal.

### 9.1.5 Replacing the separation roller

(1) Periodically replacing parts/cycle

- Separation roller: Every 200,000 counts
(2) Procedure

[1]

3. Remove two C-clips [1], and remove the arm [2].
4. Remove the C-clip [1] and the belt [2], and remove the pick-up roller assy [3].
5. Remove two C-clips [1] and two pins [2], and remove two pick-up rollers [3].
6. Remove the C-clip [1], and remove the arm [2].
7. Remove the C-clip [3], and remove the feed roller [4].

8. To reinstall, reverse the order of removal.

### 9.2 Transport section

### 9.2.1 Cleaning of the miscellaneous rollers

(1) Periodically cleaning parts/cycle

- Miscellaneous rollers: Every 50,000 counts
(2) Procedure

[1]

2. Grip both sides [1] of the holder and remove the separation roller assy [2].
3. While opening up the holder [1], remove the shaft. NOTE

- Opening the holder too much can break the holder.

4. Remove the separation roller [1] from the shaft. NOTE

- Be careful not to lose the pin.

5. Before attaching a new separation roller, wipe off the grease adhered to the torque limiter [1] and the shaft [2] using a dry cloth.
NOTE

- Make sure not to use alcohol. Wipe with a dry cloth.

[^15]
2. Using a cleaning pad dampened with alcohol, wipe the roller [1].
3. Lift up the document feed tray.
4. Using a cleaning pad dampened with alcohol, wipe the roller [1].
5. Remove the front cover.
G.7.2.5 Lower guide assembly (dual scan document feeder)
6. Using a cleaning pad dampened with alcohol, wipe the roller [1].

[1]

7. Open the opening and closing guide [1].
8. Using a cleaning pad dampened with alcohol, wipe the roller [1].

9. To reinstall, reverse the order of removal.

### 9.2.2 Cleaning of the miscellaneous rolls

(1) Periodically cleaning parts/cycle

- Miscellaneous rolls: Every 50,000 counts

## (2) Procedure

1. Lift up the document feed tray.
2. Using a cleaning pad dampened with alcohol, wipe the roll [1].

[1]
3. Open the left cover [1].
4. Using a cleaning pad dampened with alcohol, wipe the roll [1].
5. Open the dual scan document feeder.
6. Wipe the roll [2] with a cleaning pad dampened with alcohol while opening the pre-read sheet assy [1].
7. Open the opening and closing guide [1].

### 9.3 Scanning section

### 9.3.1 Cleaning of the front side scanning guide

(1) Periodically cleaning parts/cycle

- Front side scanning guide: Every 50,000 counts

## (2) Procedure

1. Open the dual scan document feeder.

### 9.3.2 Cleaning of the reflective sensor section

(1) Periodically cleaning parts/cycle

- Reflective sensor section: Every 50,000 counts
(2) Procedure

[2]

[1]

8. Using a cleaning pad dampened with alcohol, wipe the roll [1].
9. Using a cleaning pad dampened with alcohol, wipe the front side scanning guide [1] clean of dirt.
NOTE

- Be careful not to damage the sheet.

1. Clean the sensor [1] using a brush or other similar tools.
2. Open the dual scan document feeder.
3. Clean the reflective section [2] and sensor section [3] while opening the preread sheet assy [1]
4. Periodical maintenance procedure DF-629

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 10.1 Take-up section

10.1.1 Cleaning of the pick-up roller/feed roller
(1) Periodically cleaning parts/cycle

- Pick-up roller: Every 50,000 counts
- Feed roller: Every 50,000 counts
(2) Procedure
[1]

[2]
10.1.2 Cleaning of the separation roller
(1) Periodically cleaning parts/cycle
- Separation roller: Every 50,000 counts
(2) Procedure

[1]

1. Open the left cover [1].
2. Using a cleaning pad with alcohol, wipe the pick-up roller [1] / feed roller [2] clean of dirt.
3. Open the left cover [1].
4. Using a cleaning pad with alcohol, wipe the separation roller [1] clean of dirt.
10.1.3 Replacing the paper feed assy.
(1) Periodically replacing parts/cycle

- Paper feed assy.: Every 200,000 counts

NOTE

- At replacing the rollers, the paper feed assy. (pick-up roller + feed roller) and the separation roller assy. must be replaced at the same time. Otherwise, the pick-up roller, feed roller, and separation roller assy. must be replaced at the same time.
(2) Procedure
[1]

1. Open the left cover [1].

[3]

2. To reinstall, reverse the order of removal.

### 10.1.4 Replacing the pick-up roller/feed roller

(1) Periodically replacing parts/cycle

- Pick-up roller: Every 200,000 counts
- Feed roller: Every 200,000 counts

## NOTE

- At replacing the rollers, the paper feed assy. (pick-up roller + feed roller) and the separation roller assy. must be replaced at the same time. Otherwise, the pick-up roller, feed roller, and separation roller assy. must be replaced at the same time.

## (2) Procedure

1. Remove the paper feed assy.
F.10.1.3 Replacing the paper feed assy.

[2]
[1]
[1]

[3]
2. Remove the E-ring [1] and the gear assy [2]. NOTE

- When reinstalling the gear assy [2], push the gear assy [2] into position while rotating it.

3. Remove the pin [1]. NOTE

- Be careful not to lose the pin [1].

4. Remove the C-clip [2], and remove the lever [3].

5. Remove the C-clip [1].
6. Remove the screw [2], and remove the spring [3]
7. Remove the C-clip [1] and slide the bushing [2] in the direction of the arrow.
8. Remove the pick-up roller/feed roller assy [3].
9. Remove two C-rings [1].
10. Remove the arm [2] and the pin [3]. NOTE

- Be careful not to lose the pin [3].

11. Remove the C-ring [4] and the belt [5], and remove the pick-up roller assy [6].
12. Remove two levers [1]

[1]

13. Remove two C-rings [1] and two pins [2], and remove two pick-up rollers [3]. NOTE

- Be careful not to lose the pin [2].

17. To reinstall, reverse the order of removal.
18. Remove the C-ring [1] and the pin [2], and remove the arm [3].

NOTE

- Be careful not to lose the pin [2].

15. Remove the C-ring [1], the pulley [2] and the gear [3].
16. Remove two pins [4], and remove the feed roller [5]. NOTE - Be careful not to lose the pin [4].
17. Grip both sides [1] of the holder and remove the cover [2].

18. To reinstall, reverse the order of removal.

### 10.2 Transport section

### 10.2.1 Cleaning of the miscellaneous rolls

(1) Periodically cleaning parts/cycle

- Miscellaneous rolls: Every 50,000 counts
(2) Procedure

1. Lift up the document feed tray.

[1]

[1]

2. Remove the separation roller assy [1]

NOTE

- Do not lose the spring [2] at the lower part of the separation roller assy [1].

2. Using a cleaning pad dampened with alcohol, wipe the roll [1].

[^16]10.2.2 Cleaning of the miscellaneous rollers
(1) Periodically cleaning parts/cycle

- Miscellaneous rollers: Every 50,000 counts
(2) Procedure

1. Lift up the document feed tray.

[1]

### 10.3 Scanning section

10.3.1 Cleaning of the scanning guide
(1) Periodically cleaning parts/cycle

- Scanning guide: Every 50,000 counts

## (2) Procedure

1. Open the reverse automatic document feeder.
2. Using a cleaning pad dampened with alcohol, wipe the roller [1]
3. Open the left cover [1].
4. Using a cleaning pad dampened with alcohol, wipe the roller [1].
5. Lift up the guide plate DF1 [1].
6. Remove 11 screws [2], and remove the transport guide [3]. NOTE

- Use care when mounting the screw [2] in the dashed circle (one on the left when looking from the front) since it is different from other 10 screws [2].

7. Using a cleaning pad dampened with alcohol, wipe the roller [1].

## [1]

2. Using a cleaning pad dampened with alcohol, wipe the scanning guide [1] clean of dirt.
NOTE

- Be careful not to damage the sheet.

1. Clean the sensor [1] using a brush or other similar tools.
2. Open the document reading front guide [1], and clean the sensor [2] and the reflective part [3] using a brush or other similar tools.

## 11. Periodical maintenance procedure DF-704

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 11.1 Take-up section

### 11.1.1 Cleaning of the pick-up roller/feed roller

(1) Periodically cleaning parts/cycle

- Pick-up roller: Every 50,000 counts
- Feed roller: Every 50,000 counts
(2) Procedure

> 1. Open the left cover [1].
2. Using a cleaning pad with alcohol, wipe the pick-up roller [1] / feed roller [2] clean of dirt.

### 11.1.2 Cleaning of the separation roller

(1) Periodically cleaning parts/cycle

- Separation roller: Every 50,000 counts
(2) Procedure

[1]

1. Open the left cover [1].
2. Using a cleaning pad with alcohol, wipe the separation roller [1] clean of dirt.

### 11.1.3 Replacing the paper feed assy.

(1) Periodically replacing parts/cycle

- Paper feed assy.: Every 200,000 counts

NOTE

- At replacing the rollers, the paper feed assy. (pick-up roller + feed roller) and the separation roller assy. must be replaced at the same time. Otherwise, the pick-up roller, feed roller , and separation roller assy. must be replaced at the same time.
(2) Procedure

1. Open the left cover [1].
epunacolot como [1]
To

2. Release the lock [1].
3. Release the two tabs [2], and remove the paper feed assy. [3].

4. To reinstall, reverse the order of removal.

### 11.1.4 Replacing the pick-up roller/feed roller

(1) Periodically replacing parts/cycle

- Pick-up roller: Every 200,000 counts
- Feed roller: Every 200,000 counts

## NOTE

- At replacing the rollers, the paper feed assy. (pick-up roller + feed roller) and the separation roller assy. must be replaced at the same time. Otherwise, the pick-up roller, feed roller, and separation roller assy. must be replaced at the same time.

## (2) Procedure

1. Remove the paper feed assy..
F.11.1.3 Replacing the paper feed assy.

2. Remove the E-ring [1] and the gear assy [2].
NOTE

- When reinstalling the gear assy [2], push the gear assy [2] into position while rotating it.

3. Remove the pin [1]. NOTE

- Be careful not to lose the pin [1].

4. Remove the C-clip [2], and remove the lever [3].

[3]

5. Remove the C-clip [1].
6. Remove the screw [2], and remove the spring [3]
7. Remove the C-clip [1] and slide the bushing [2] in the direction of the arrow.
8. Remove the pick-up roller/feed roller assy [3].
9. Remove two C-rings [1].
10. Remove the arm [2] and the pin [3]. NOTE

- Be careful not to lose the pin [3].

11. Remove the C-ring [4] and the belt [5], and remove the pick-up roller assy [6].
12. Remove two levers [1]

[1]

13. Remove two C-rings [1] and two pins [2], and remove two pick-up rollers [3]. NOTE

- Be careful not to lose the pin [2].

14. Remove the C-ring [1] and the pin [2], and remove the arm [3].

NOTE

- Be careful not to lose the pin [2].

15. Remove the C-ring [1], the pulley [2] and the gear [3].
16. Remove two pins [4], and remove the feed roller [5]. NOTE - Be careful not to lose the pin [4].

### 11.1.5 Replacing the separation roller assy

(1) Periodically replacing parts/cycle

- Separation roller assy: Every 200,000 counts

NOTE

- At replacing the rollers, the paper feed assy. (pick-up roller + feed roller) and the separation roller assy. must be replaced at the same time. Otherwise, the pick-up roller, feed roller, and separation roller assy. must be replaced at the same time.
(2) Procedure

[1]

[2]

2. Grip both sides [1] of the holder and remove the cover [2].

3. To reinstall, reverse the order of removal.
4. Remove the separation roller assy [1].

NOTE

- Do not lose the spring [2] at the lower part of the separation roller assy [1].

3. Open the left cover [1].
4. Using a cleaning pad dampened with alcohol, wipe the roll [1].

[1]
5. Open the opening and closing guide [1].

[1]

[1]

### 11.2.2 Cleaning of the miscellaneous rollers

(1) Periodically cleaning parts/cycle

- Miscellaneous rollers: Every 50,000 counts
(2) Procedure

1. Lift up the document feed tray.

2. Using a cleaning pad dampened with alcohol, wipe the roller [1].
3. Open the left cover [1].
4. Using a cleaning pad dampened with alcohol, wipe the roll [1].
5. Close the opening and closing guide [1].

[1]

6. Remove the front cover.
G.8.4.1 Front cover (DF-704)
7. Remove the rear cover
G.8.4.2 Rear cover (DF-704)
[1]

8. Using a cleaning pad dampened with alcohol, wipe the roller [1].
9. Lift up the document feed tray [1].
10. Remove the claw [2] at the front side, and set the document feed tray [1] off the working area.
11. Remove 10 screws [1], and remove the transport guide [2]. NOTE

- Use care when mounting the screw [1] in the dashed circle (one on the left when looking from the front) since it is different from other nine screws [1].

10. Using a cleaning pad dampened with alcohol, wipe the roller [1].

[^17]
[1]

[1]

### 11.3 Scanning section

### 11.3.1 Cleaning of the front side scanning guide

(1) Periodically cleaning parts/cycle

- Front side scanning guide: Every 50,000 counts
(2) Procedure

1. Open the dual scan document feeder.

11.3.2 Cleaning of the reflective sensor section
(1) Periodically cleaning parts/cycle

- Reflective sensor section: Every 50,000 counts
(2) Procedure

[^18]12. Using a cleaning pad dampened with alcohol, wipe the roller [1].
13. Close the opening and closing guide [1].
2. Using a cleaning pad dampened with alcohol, wipe the front side scanning guide [1] clean of dirt.
NOTE

- Be careful not to damage the sheet.

1. Clean the sensor [1] using a brush or other similar tools.

## [1]

3. Open the document reading front guide [1], and clean the sensor [2] and the reflective part [3] using a brush or other similar tools.

## 12. Periodical maintenance procedure PC-110/PC-210

### 12.1 Paper feed section

### 12.1.1 Replacing the tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller

(1) Periodically replacing parts/cycle

- Tray 3 feed roller: Every 300,000 counts
- Tray 3 pick-up roller: Every 300,000 counts
- Tray 3 separation roller + torque limiter: Every 300,000 counts

NOTE

- Replace the tray 3 feed roller, tray 3 pick-up roller and tray 3 separation roller at the same time.
(2) Procedure

1. Open the right door.
2. Remove the tray 3.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)
3. Remove the tray 4 or storage box.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)

4. Remove the C-clip [1] each, and remove the tray 3 feed roller [2], tray 3 pickup roller [3] and tray 3 separation roller [4]. NOTE

- When replacing the tray 3 separation roller, replace the torque limiter [5] at the same time.

5. To reinstall, reverse the order of removal.
6. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [3rd.].
12.1.2 Replacing the tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller
(1) Periodically replacing parts/cycle

- Tray 4 feed roller: Every 300,000 counts
- Tray 4 pick-up roller: Every 300,000 counts
- Tray 4 separation roller + torque limiter: Every 300,000 counts

NOTE

- Replace the tray 4 feed roller, tray 4 pick-up roller and tray 4 separation roller at the same time.
(2) Procedure

1. Open the right door
2. Remove the tray 3 and tray 4. G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)

3. Remove the C-clip [1] each, and remove the tray 4 feed roller [2], tray 4 pickup roller [3] and tray 4 separation roller [4]. NOTE

- When replacing the tray 4 separation roller, replace the torque limiter [5] at the same time.

4. To reinstall, reverse the order of removal.
5. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [4th.].

## 13. Periodical maintenance procedure PC-115/PC-215

### 13.1 Paper feed section

13.1.1 Replacing the tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller
(1) Periodically replacing parts/cycle

- Tray 3 feed roller: Every 300,000 counts
- Tray 3 pick-up roller: Every 300,000 counts
- Tray 3 separation roller + torque limiter: Every 300,000 counts

## NOTE

- Replace the tray 3 feed roller, tray 3 pick-up roller, and tray 3 separation roller at the same time.
(2) Procedure

1. Open the right door
2. Remove the tray 3.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)
3. Remove the tray 4.
G.8.6. 4 Tray 3, tray 4 (PC-115/PC-215)

[3] [2] [5] [4]
4. While unlocking the claw [1], remove the tray 3 feed roller [2], tray 3 pick-up roller [3], and tray 3 separation roller [4]. NOTE

- When replacing the tray 3 separation roller, replace the torque limiter [5] at the same time.

5. To reinstall, reverse the order of removal.
6. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [3rd.]. I.5.17.2 Life
13.1.2 Replacing the tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller
(1) Periodically replacing parts/cycle

- Tray 4 feed roller: Every 300,000 counts
- Tray 4 pick-up roller: Every 300,000 counts
- Tray 4 separation roller + torque limiter: Every 300,000 counts

## NOTE

- Replace the tray 4 feed roller, tray 4 pick-up roller, and tray 4 separation roller at the same time.
(2) Procedure

1. Open the right door.
2. Remove the tray 3 and tray 4 .
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)

[3] [2] [5] [4]
3. While unlocking the claw [1], remove the tray 4 feed roller [2], tray 4 pick-up roller [3], and tray 4 separation roller [4]. NOTE

- When replacing the tray 4 separation roller, replace the torque limiter [5] at the same time.

## 14. Periodical maintenance procedure PC-410

### 14.1 Paper feed section

14.1.1 Replacing the feed roller, pick-up roller, separation roller
(1) Periodically replacing parts/cycle

- Feed roller: Every 300,000 counts
- Pick-up roller: Every 300,000 counts
- Separation roller + torque limiter: Every 300,000 counts

NOTE

- Replace the feed roller, pick-up roller and separation roller at the same time.
(2) Procedure

1. Slide out the paper feed tray.
2. Remove the right door.
G.8.7.1 Right door (PC-410)

3. Remove the C-clip [1], and remove the separation roller [2]. NOTE

- When replacing the separation roller, replace the torque limiter [3] at the same time.

4. Remove the C-clip [1], and remove the feed roller [2].

5. Remove the C-clip [1], and remove the pick-up roller [2].

6. To reinstall, reverse the order of removal.
7. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [3rd.].
8. Periodical maintenance procedure PC-415

### 15.1 Paper feed section

15.1.1 Replacing the feed roller, pick-up roller, separation roller
(1) Periodically replacing parts/cycle

- Feed roller: Every 300,000 counts
- Pick-up roller: Every 300,000 counts
- Separation roller + torque limiter: Every 300,000 counts

## NOTE

- Replace the feed roller, pick-up roller, and separation roller at the same time.
(2) Procedure

1. Slide out the paper feed tray.
2. Remove the right door.
G.8.8.1 Right door (PC-415)

3. While pushing down the separation roller assy [1] and unlocking the claw [2], remove the separation roller [3]. NOTE

- When replacing the separation roller, replace the torque limiter [4] at the same time.

[3]

4. While unlocking the claw [1], remove the feed roller [2].
5. While unlocking the claw [1], remove the pick-up roller [2].

6. To reinstall, reverse the order of removal.
7. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [3rd.].
I.5.17.2 Life
8. Periodical maintenance procedure LU-207

### 16.1 Paper feed section

### 16.1.1 Replacing the pick-up roller

(1) Periodically replacing parts/cycle

- Pick-up roller: Every 300,000 counts
(2) Procedure

1. Open the upper door.
2. Move the feed roller [1] up.

[1]

3. Remove two C-clips [1], the bushing [2] and remove the feed roller assy [3].
4. Remove two C-clips [1], the actuator [2] and remove the pick-up roller [3]
[2] [3]

5. To reinstall, reverse the order of removal.

### 16.1.2 Replacing the feed roller

(1) Periodically replacing parts/cycle

- Feed roller: Every 300,000 counts
(2) Procedure

1. Open the upper door.
2. Move the feed roller [1] up.

[2] [3]

3. To reinstall, reverse the order of removal.

### 16.1.3 Replacing the separation roller

(1) Periodically replacing parts/cycle

- Separation roller: Every 300,000 counts
(2) Procedure

1. Open the upper door.
2. Move the feed roller [1] up.
3. Remove four screws [1], and remove the plate [2].
[2]

4. To reinstall, reverse the order of removal.
5. Remove the C-clip [1] while pressing the separation roller down to remove the separation roller [2].
6. Periodical maintenance procedure LU-302

### 17.1 Paper feed section

### 17.1.1 Replacing the pick-up roller

(1) Periodically replacing parts/cycle

- Pick-up roller: Every 300,000 counts

## (2) Procedure

[1]

2. Move the feed roller assy [1] up.
3. Remove two C-clips [1], the bushing [2] and remove the feed roller assy [3].
4. Remove two C-clips [1], the actuator [2] and remove the pick-up roller [3].
2. Move the feed roller assy [1] up.

[2] [1]

5. To reinstall, reverse the order of removal.

### 17.1.3 Replacing the separation roller

(1) Periodically replacing parts/cycle

- Separation roller: Every 300,000 counts

## (2) Procedure

[1]

5. To reinstall, reverse the order of removal.
3. Remove two C-clips [1], the bushing [2] and remove the feed roller assy [3].
4. Remove three C-clips [1], the actuator [2] and remove the feed roller [3].
2. Move the feed roller assy [1] up.
3. Remove four screws [1], and remove the plate [2].
4. Remove the C-clip [1] while pressing the separation roller down to remove the separation roller [2].
18. Periodical maintenance procedure FS-534/FS-534SD

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 18.1 Paper exit section

### 18.1.1 Cleaning procedure for each rollers/each rolls

(1) Periodically cleaning parts/cycle

- Each rollers/Each rolls: Every 300,000 counts
(2) Cleaning point

### 18.1.2 Cleaning the paddles

(1) Periodically cleaning parts/cycle

- Paddle: Every 300,000 counts
(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

### 18.1.3 Replacing the paddle units

(1) Periodically replacing parts/cycle

- Paddle units: Every 2,000,000 counts
(2) Procedure

1. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the front door of the finisher. G.8.14.2 Front door (FS-534/FS-534SD)
3. Remove the front upper cover of the finisher. G.8.14.3 Front upper cover (FS-534/FS-534SD)
4. Remove the rear cover of the finisher. G.8.14.1 Rear cover (FS-534/FS-534SD)
5. Remove the paper exit tray [1].

6. Remove two tabs [1], and remove the cover [2].
7. Release the tab [1], and remove the main tray upper position detect switch [2].
8. Remove four screws [1], and remove the cover [2].
9. Remove three paddle units [1] NOTE

- When reinstalling the paddle units, be careful not to attach them at an incorrect location or in an incorrect orientation. Length: [4] > [2] > [3]
18.1.4 Cleaning procedure for each rollers/each rolls
(1) Periodically cleaning parts/cycle
- Each rollers/Each rolls: Every 300,000 counts
(2) Cleaning point

18.1.5 Cleaning the upper paddle
(1) Periodically cleaning parts/cycle
- Upper paddle: Every 300,000 counts
(2) Procedure

1. Remove the saddle unit.
G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)

[2]
[1]
3. Remove three screws [1], and remove the tri-fold guide motor assy [2].
4. Remove four screws [1], and remove the conveyance assy [2].
5. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

### 18.1.6 Cleaning the lower paddle

(1) Periodically cleaning parts/cycle

- Lower paddle: Every 300,000 counts
(2) Procedure

18.1.7 Replacing the upper paddle assy
(1) Periodically replacing parts/cycle
- Upper paddle assy: Every 2,000,000 counts
(2) Procedure

1. Remove the saddle unit.
G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)

[1]

3. Disconnect two connectors [1]
4. Remove the E-ring [2].
5. Remove the gear [3] and the belt [4].
6. Remove four screws [5], and remove the center fold guide motor assy [6].
7. NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

[1]

13. To reinstall, reverse the order of removal.
18.1.8 Replacing the lower paddle unit
(1) Periodically replacing parts/cycle

- Lower paddle unit: Every 2,000,000 counts
(2) Procedure

9. Remove the bushing [1].
10. Remove the E-ring [2], and remove the bushing [3].
11. Remove two E-rings [4].
12. Replace the upper paddle assy [5].
13. Remove four lower paddle units [1].
14. Periodical maintenance procedure FS-533

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 19.1 Paper exit section

19.1.1 Cleaning procedure for each parts
(1) Periodically cleaning parts/cycle

- Each rollers/Each rolls: Every 300,000 counts
(2) Cleaning point

## NOTE

- Do not clean the alignment roller F/R.
19.1.2 Cleaning the paper exit paddle
(1) Periodically cleaning parts/cycle
- Paper exit paddle: Every 300,000 counts
(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paper exit paddle [1].

### 19.2 Alignment section

19.2.1 Replacing the alignment roller assy F/R
(1) Periodically replacing parts/cycle

- Alignment roller assy F/R: Every 1,000,000 counts
[1]

[2]

| $[1]$ | Alignment roller assy R | [2] Alignment roller assy F |
| :--- | :--- | :--- |

(2) Removal procedure

1. Remove the front cover.

Front cover (FS-533)

8. To reinstall, reverse the order of removal.
2. Remove the C-clip [1].
3. Move the bushing [2] to the right.
4. Pull the paper stopper [1] and remove the alignment roller assy /F [2].

5. Remove the C-clip [1].
6. Move the bushing [2] to the left.
7. Press the paper stopper [1] to the rear and remove the alignment roller assy /R [2].

## 20. Periodical maintenance procedure FS-537/FS-537SD

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 20.1 Paper exit section

### 20.1.1 Cleaning procedure for each rollers/each rolls (FS-537SD/FS-537)

(1) Periodically cleaning parts/cycle

- Cleaning each roller/roll: Every 300,000 prints

- *: Option
20.1.2 Cleaning the paddles (FS-537SD/FS-537)
(1) Periodically cleaning parts/cycle
- Paddle: Every 300,000 prints
(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

[1]
20.1.3 Replacing the paddle (FS-537SD/FS-537)
(1) Periodically replacing parts/cycle

- Paddle: Every 2,000,000 prints

## (2) Procedure

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the main tray.
G.8.19.8 Main tray (Paper exit lower tray) (FS-537/FS-537SD)
[2]

[1]

6. To reinstall, reverse the order of removal.
3. NOTE

- Since the main tray [2] cannot be removed if it is positioned at the top, slide the gear coupling [1] to the right and lower the tray to the lowest level to remove it.

4. Remove the paddles [1].
5. NOTE

- Securely install the paddles [1] by aligning the direction of the paddle and the hole in the shaft.

# $\triangle$ CAUTION 

- Always carry out this procedure while supporting the main tray with your hand since the main will strongly come down when you slide the coupling.
20.1.4 Cleaning the exit tray conveyance belt (FS-537SD)
(1) Periodically cleaning parts/cycle
- Exit tray transport belt: Every 300,000 counts
(2) Procedure

### 20.1.5 Cleaning the upper paddle (FS-537SD)

## (1) Procedure

1. Remove the saddle unit

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)

[2] [1]

[1]

(2) Periodically cleaning parts/cycle

- Upper paddle: Every 300,000 counts

### 20.1.6 Cleaning the lower paddle (FS-537SD)

(1) Periodically cleaning parts/cycle

- Lower paddle: Every 300,000 counts

1. Clean the exit tray conveyance belt [1] with a cleaning pad dampened with alcohol.
2. Remove three screws [1], and remove the tri-folding guide motor assy [2].
3. Remove four screws [1], and remove the conveyance assy [2].
4. Using a cleaning pad dampened with alcohol, wipe the paddle [1].
(2) Procedure

20.1.7 Replacing the upper paddle (FS-537SD)
(1) Periodically replacing parts/cycle

- Upper paddle: Every 2,000,000 counts

## (2) Procedure

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)

[1]

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1].
2. Disconnect two connectors [1]
3. Remove the E-ring [2].
4. Remove the gear [3] and the belt [4].
5. Remove four screws [5] and remove the center fold guide motor assy [6].

## NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

8. Remove the upper paddle assy [1].

9. To reinstall, reverse the order of removal.

### 20.1.8 Replacing the lower paddle (FS-537SD)

(1) Periodically replacing parts/cycle

- Lower paddle: Every 2,000,000 counts
(2) Procedure

9. Remove the bushing [1].
10. Remove the E-ring [2], and remove the bushing [3]
11. Remove two E-rings [4].
12. Replace the upper paddle [5].
13. Remove the lower paddle [1].

### 20.2 Sensor section

20.2.1 FNS entrance sensor (PS34) (FS-537SD/FS-537)
(1) Periodically cleaning parts/cycle

- FNS entrance sensor (PS34): Every 300,000 printouts
(2) Procedure

1. Remove the finisher from the main body. Finisher (FS-537/FS-537SD)
[1]

[2]
2. Remove two screws [1], and remove the cover [2].
3. Remove the screw [1].

[1]
4. Clean the FNS entrance sensor [1].

NOTE

- Do not wipe out with any solvents or alcohols.

5. Reinstall the above parts following the removal steps in reverse.

### 20.2.2 FNS middle sensor (PS36) (FS-537SD/FS-537)

## (1) Periodically cleaning parts/cycle

- FNS middle sensor (PS36): Every 300,000 printouts

## (2) Procedure

1. Remove the finisher from the main body. Finisher (FS-537/FS-537SD)
2. Remove the upper cover/1.
G.8.19.1 Upper cover/1 (FS-537/FS-537SD)
3. Remove the upper cover/2.
G.8.19.2 Upper cover/2 (FS-537/FS-537SD)
4. Remove the upper cover/3.
G.8.19.3 Upper cover/3 (FS-537/FS-537SD)

5. Remove four screws [1] and raise the metal plate [2].
[1]

6. Clean the FNS middle sensor [1]. NOTE

- Do not wipe out with any solvents or alcohols.

8. Reinstall the above parts following the removal steps in reverse.

### 20.2.3 Main tray exit sensor (PS37) (FS-537SD/FS-537)

(1) Periodically cleaning parts/cycle

- Main tray exit sensor (PS37): Every 300,000 printouts

## (2) Procedure

1. Remove the finisher from the main body. Finisher (FS-537/FS-537SD)
2. Remove the upper cover/1.
G.8.19.1 Upper cover/1 (FS-537/FS-537SD)
3. Remove the upper cover/2.
G.8.19.2 Upper cover/2 (FS-537/FS-537SD)
4. Remove the upper cover/3.
G.8.19.3 Upper cover/3 (FS-537/FS-537SD)

5. Remove four screws [1] and raise the metal plate [2].
6. Remove two screws [2] from the two guide holes [1].
7. Open the front door of the finisher, and open the guide lever (FS4/FS5) [1].

8. Pull out and clean the main tray exit sensor [1].

## NOTE

- Do not wipe out with any solvents or alcohols.

9. Reinstall the above parts following the removal steps in reverse.

## 21. Periodical maintenance procedure ZU-609

### 21.1 Roller section

21.1.1 Cleaning of the $Z$ fold roller (ZU-609)
(1) Periodically cleaning parts/cycle

- Z fold roller: Every 300,000 counts

## (2) Procedure

1. Remove the $Z$ folding unit. Z Folding Unit (ZU-609)
2. Using a cleaning pad dampened with alcohol, wipe the $Z$ fold roller [1] clean of dirt.

[1]
3. Reinstall the above parts following the removal steps in reverse.

## 22. Periodical maintenance procedure JS-602

note

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 22.1 Paper exit section

### 22.1.1 Cleaning conveyance roller/paper exit roller (JS-602)

(1) Periodically cleaning parts/cycle

- Conveyance roller: Every 100,000 counts
- Paper exit roller: Every 100,000 counts
(2) Procedure

1. Open the cover.

2. Using a cleaning pad dampened with alcohol, wipe the conveyance roller [1].
3. Using a cleaning pad dampened with alcohol, wipe the paper exit roller [1].

## 23. Periodical maintenance procedure $\mathrm{PI}-507$

### 23.1 Paper feed section

23.1.1 Replacing the pick-up roller/Lw / feed roller/Lw (PI-507)
(1) Periodically replacing parts/cycle

- Pick-up roller/Lw: Every 200,000 counts
- Feed roller/Lw: Every 100,000 counts

## (2) Procedure

1. Remove the upper cover.
G.8.24.1 Upper cover (PI-507)
[1]

[2]

[2]
[2]

[1]
2. Pull the unlock lever [1] and open the upper door [2].
3. Remove two C-clips [1], shift the two bushings [2] at left and right side, and remove the feed roller assy/Lw [3].
4. Remove the bushing [1] and remove the actuator [2].
5. Remove two C-clips [1] and the two bushings [2].

6. Remove the C-clip [1].
7. Slide the two roller shafts [2] toward the direction of the arrow and remove the pick-up roller/Lw [3] and the feed roller/Lw [4].
NOTE

- Install with the blue side of the one-way clutch of the pick-up roller and the feed roller to face front when installing.

8. Remove the pick-up roller [1] and the feed roller [2] from the one-way clutch [3] [4]. NOTE

- Insert the pick-up roller [1] so the cut out [5] of the pick-up roller to align with the protrusion [6] of the one-way clutch when installing the pick-up roller.
- Insert the feed roller [2] so the cut out [7] of the feed roller to align with the protrusion [8] of the one-way clutch when installing the feed roller.

### 23.1.2 Replacing separation roller/Lw / torque limiter/Lw (PI-507)

(1) Periodically replacing parts/cycle

- Separation roller/Lw: Every 100,000 counts
- Torque limiter/Lw: Every 600,000 counts

## (2) Procedure

1. Remove the upper cover. G.8.24.1 Upper cover (PI-507)
[1]

[2]

[2]

[2]
2. Pull the unlock lever [1] and open the upper door [2].
3. Remove two C-clips [1], shift the two bushings [2] at left and right side toward outside, and remove the feed roller assy/Lw [3].
4. Unlock the hook [1] and remove the separation roller assy/Lw [2] by moving it in a direction of the arrow.

5. To reinstall, reverse the order of removal.
6. Remove the C-clip [1] and remove the separation roller/Lw [2] and the torque limiter/Lw [3].
NOTE

- Install the separation roller/Lw so the two cut outs [4] will be facing forward and aligned to the protrusion [5].

## 24. Periodical maintenance procedure FS-536/FS-536SD

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 24.1 Paper exit section

24.1.1 Cleaning procedure for each rollers/each rolls (FS-536/FS-536SD)
(1) Periodically cleaning parts/cycle

- Each rollers/Each rolls: Every 300,000 counts
(2) Cleaning point

FS-536/FS-536SD (when PK-520/RU-515 is installed)

| $[1]$ | Sub tray exit roller, roll | $[2]$ | Sub tray transport roller, roll |
| :--- | :--- | :--- | :--- |
| $[3]$ | Transport roller, roll | $[4]$ | RU transport roller 3, transport roll 3 (RU-515) * |
| $[5]$ | RU transport roller 2, transport roll 2 (RU-515) * | $[6]$ | RU transport roller 1, transport roll $1(\mathrm{RU}-515)^{*}$ |
| $[7]$ | FNS entry roller, roll | $[8]$ | Saddle section exit roller, roll |
| $[9]$ | Saddle section paper feed roller, roll | $[10]$ | Center folding roller |
| $[11]$ | Tri-folding roller, roll | $[12]$ | Sub tray exit roller, roll |
| $[13]$ | Receiving roller, Receiving roll | - | - |

- *: Option
24.1.2 Cleaning the paddle (FS-536/FS-536SD)
(1) Periodically cleaning parts/cycle
- Paddle: Every 300,000 counts
(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1]

### 24.1.3 Replacing the paddle (FS-536/FS-536SD)

## (1) Periodically replacing parts/cycle

- Paddle: Every 2,000,000 counts

## (2) Procedure

1. Remove the finisher from the main body. Finisher (FS-536/FS-536SD)
2. Remove the front door of the finisher
G.8.16.2 Front door (FS-536/FS-536SD)
3. Remove the front upper cover of the finisher
G.8.16.3 Front upper cover (FS-536/FS-536SD)
4. Remove the rear cover of the finisher.
G.8.16.1 Rear cover (FS-536/FS-536SD)
5. Remove the exit tray [1].
6. Remove two tabs [1], and remove the cover [2].
7. Release the tab [1], and remove the main tray upper position detect switch [2].
8. Remove four screws [1], and remove the cover [2].

9. To reinstall, reverse the order of removal.

### 24.1.4 Cleaning the upper paddle (FS-536SD)

(1) Periodically cleaning parts/cycle

- Upper paddle: Every 300,000 counts

## (2) Procedure

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover
G.8.17.1 Front cover (FS-536SD saddle section)

## [1]

[2]
[1]
9. Remove the paddle assy. (Front) [1], the paddle assy. (Center) [2] and the paddle assy. (Rear) [3]
10. NOTE

- When reinstalling the paddles, be careful not to attach them at an incorrect location or in an incorrect orientation.
[1]: Paddle Assy. (Front)
[2]: Paddle Assy. (Center)
[3]: Paddle Assy. (Rear)
[4]: Paddle (Long)
[5]: Paddle (Middle)
[6]: Paddle (Short)

3. Remove three screws [1], and remove the tri-fold guide motor assy [2].

[1]
[1]

24.1.5 Cleaning the lower paddle (FS-536SD)
(1) Periodically cleaning parts/cycle

- Lower paddle: Every 300,000 counts
(2) Procedure

### 24.1.6 Replacing the upper paddle (FS-536SD)

(1) Periodically replacing parts/cycle

- Upper paddle: Every 2,000,000 counts
(2) Procedure

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover
G.8.17.1 Front cover (FS-536SD saddle section)

4. Remove four screws [1], and remove the conveyance assy [2].
5. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1].
2. Disconnect two connectors [1]
3. Remove the E-ring [2].
4. Remove the gear [3] and the belt [4].
5. Remove four screws [5], and remove the center fold guide motor assy [6].

[1]

[1]

6. To reinstall, reverse the order of removal.
24.1.7 Replacing the lower paddle (FS-536SD)
(1) Periodically replacing parts/cycle

- Lower paddle: Every 2,000,000 counts
(2) Procedure

7. NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

8. Remove the upper paddle assy [1].
9. Remove the bushing [1].
10. Remove the E-ring [2], and remove the bushing [3].
11. Remove two E-rings [4].
12. Replace the upper paddle [5].
13. Remove four lower paddles [1].

### 24.2 Sensor section

### 24.2.1 FNS entrance sensor (PS4) (FS-536SD/FS-536)

(1) Periodically cleaning parts/cycle

- FNS entrance sensor: Every 300,000 counts

## (2) Procedure

1. Remove the finisher from the main body. Finisher (FS-536/FS-536SD)
2. Remove the front door of the finisher. G.8.16.2 Front door (FS-536/FS-536SD)
3. Remove the front upper cover of the finisher. G.8.16.3 Front upper cover (FS-536/FS-536SD)
4. Remove the rear cover of the finisher. G.8.16.1 Rear cover (FS-536/FS-536SD)

5. Remove seven screws [1], and remove the cover [7]
6. Remove four screws [1] and open the cover [2].

[1]

7. Using a cleaning pad dampened with alcohol, wipe the FNS entrance sensor [1] clean of dirt.
8. To reinstall, reverse the order of removal.

### 24.2.2 Main tray exit sensor (PS16) (FS-536SD/FS-536)

(1) Periodically cleaning parts/cycle

- Main tray exit sensor: Every 300,000 counts
(2) Procedure

1. Remove the finisher from the main body. Finisher (FS-536/FS-536SD)
2. Remove the front door of the finisher G.8.16.2 Front door (FS-536/FS-536SD)
3. Remove the front upper cover of the finisher. G.8.16.3 Front upper cover (FS-536/FS-536SD)
4. Remove the rear cover of the finisher. G.8.16.1 Rear cover (FS-536/FS-536SD)

## [1]

[1]

[2]
[3]
[1]

8. To reinstall, reverse the order of removal.
5. Rotate the douser [1] by 180 degrees.
6. Disconnect the connector [1], and remove the screw [2] and the guide [3].
7. Using a cleaning pad dampened with alcohol, clean the main tray exit sensor [1].

## G DISASSEMBLY/REASSEMBLY

1. Disassembly/adjustment prohibited items
1.1 Paint-locked screws
note

- To prevent loose screws, a screw lock in blue or green series color is applied to the screws.
- The screw lock is applied to the screws that may get loose due to the vibrations and loads created by the use of machine or due to the vibrations created during transportation.
- If the screw lock coated screws are loosened or removed, be sure to apply a screw lock after the screws are tightened.

### 1.2 Red-painted screws

## NOTE

- The screws which are difficult to be adjusted in the field are painted in red in order to prevent them from being removed by mistake.
- Do not remove or loosen any of the red-painted screws in the field. It should also be noted that, when two or more screws are used for a single part, only one representative screw may be marked with the red paint.

### 1.3 Variable resistors on board

NOTE

- Do not turn the variable resistors on boards for which no adjusting instructions are given in Adjustment/Setting.
1.4 Warnings for disassembly

## \WARNING

- When accessing a hard-to-view or narrow spot, be careful about sharp edges and burrs on the frame and parts.
They may injure your hands or fingers.

## $\triangle$ WARNING

- If it is absolutely necessary to service the machine with the door open or external covers removed, always be attentive to the motion of the internal parts.

A normally protected part may cause unexpected hazards.

## $\triangle$ WARNING

- When removing a part that secures a motor, gear, or other moving part, disassembling a unit, or reinstalling any of such parts and units, be careful about moving parts and use care not to drop any part or unit. During the service procedure, give sufficient support for any heavy unit.

You may be injured by a falling part or unit.

## ©WARNING

- Whenever mounting an option on the machine, be attentive
 to the motion of the other workers performing the task.

Another worker may be injured by a pinch point between the machine and the option.

## $\triangle$ WARNING

- When mounting an option on the machine, be careful about the clearance between the machine and the option.

You may be injured with your finger or hand pinched between the machine and the option.

## $\triangle$ CAUTION

- Do not leave the machine unattended during transportation, installation, and/or inspection. If the machine is left unattended, face protrusions toward the wall or take other necessary precautions to prevent.

A user or other person in the area from stumbling over a protrusion of the machine or being caught by a cable, possibly causing a fall to the floor or other personal injury.

## 2. Units from which removing is prohibited

### 2.1 CCD board

### 2.1.1 Reason for prohibition

- Since the accuracy of the CCD board is guaranteed as a unit, no accuracy is guaranteed if it is disassembled. Therefore, screws that lead to the disassembly of the CCD board must not be removed.

### 2.2 PH unit

### 2.2.1 Reason for prohibition

- The laser runs inside the PH unit. Opening the cover may cause dust to enter and interrupt the laser. Do no remove any screw which may disassemble the PH unit.

### 2.3 Fusing unit

### 2.3.1 Reason for prohibition

- Inner part of the fusing unit and the position of the fusing belt are adjusted prior to shipping. Do not remove any screw which may disassemble the fusing unit.

3. Disassembly/assembly warning/caution items
3.1 Removal/installing of PWBs

## $\triangle$ CAUTION

- When removing or installing a circuit board or other electrical component, refer to "Handling of PWBs" and follow the corresponding removal or installing procedures.

- The removal procedures given in the following omit the removal of connectors and screws securing the circuit board support or circuit board.
- Where it is absolutely necessary to touch the ICs and other electrical components on the board, be sure to ground your body.

## 4. Notes when transporting the machine

## NOTE

- When transporting a machine to reinstall it in another location, attach the following protective materials to the machine in order to prevent the machine from being damaged or spilling out by vibration during transportation.
- The protective materials are removed when the machine is set up. However, be sure to keep the protective materials after finishing the set-up.

### 4.1 Protective materials

### 4.1.1 Protective materials for the photo conductors

Reinstall procedure

1. Open the front door.
2. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box

3. Insert the protective materials for the photo conductors [1] in the indicated position and push it as far as it will go.

### 4.1.2 Scanner packing bracket

1. Check that the exposure unit is at the home position.
2. Remove four caps.
[1]

[1]
[1]
3. Attach the scanner packing brackets [1] to fix the scanner.

## 5. bizhub C368/C308/C258

### 5.2 Disassembly/reassembly procedure (Exterior parts)

### 5.2.1 Scanner rear cover

2. To reinstall, reverse the order of removal.

### 5.2.2 Scanner right cover

[2]

[1]
2. To reinstall, reverse the order of removal.

### 5.2.3 Scanner front cover

1. Remove the scanner left cover. G.5.2.4 Scanner left cover
2. Remove the control panel left cover/1. G.5.2.6 Control panel left cover/1
3. Remove the control panel right cover. G.5.2.8 Control panel right cover
4. Remove the control panel upper cover. G.5.2.9 Control panel upper cover

## [1]

[1]

[1]
[2]
7. To reinstall, reverse the order of removal.

1. Remove two screws [1], and remove the scanner rear cover [2].
2. Remove three screws [1], and remove the scanner right cover [2].
3. Remove the stylus pen [1].
4. Remove three screws [1], and remove the scanner front cover [2].

### 5.2.4 Scanner left cover

2. To reinstall, reverse the order of removal.

### 5.2.5 Scanner upper rear cover

1. Remove the scanner rear cover. G.5.2.1 Scanner rear cover

[2]
2. To reinstall, reverse the order of removal.

### 5.2.6 Control panel left cover/1

2. To reinstall, reverse the order of removal.

### 5.2.7 Control panel left cover/2

1. Remove the control panel right cover. G.5.2.8 Control panel right cover
2. Remove the control panel front cover G.5.2.10 Control panel front cover

3. To reinstall, reverse the order of removal.

### 5.2.8 Control panel right cover

1. Open the right door.
2. Remove four screws [1], and remove the scanner left cover [2].
3. Remove four screws [1], and remove the scanner upper rear cover [2]
4. Remove two screws [1], and remove the control panel left cover/1 [2].
5. Remove four screws [1], and remove the control panel left cover/2 [2].

6. To reinstall, reverse the order of removal.

### 5.2.9 Control panel upper cover

1. Remove the control panel left cover/1. G.5.2.6 Control panel left cover/1
2. Remove the control panel right cover. G.5.2.8 Control panel right cover

3. To reinstall, reverse the order of removal.

### 5.2.10 Control panel front cover

1. Remove the control panel right cover. G.5.2.8 Control panel right cover

[1]

2. Remove two screws [1], and remove the control panel right cover [2].
3. Remove the screw [1], and remove the control panel upper cover [2].
4. Remove two caps [1]
5. Remove five screws [1] from the control panel front cover [2] and remove the cover by releasing the tabs

6. To reinstall, reverse the order of removal.

### 5.2.11 Control panel unit

1. Remove the control panel left cover/1.
G.5.2.6 Control panel left cover/1
2. Remove the control panel right cover.
G.5.2.8 Control panel right cover
3. Remove the control panel upper cover. G.5.2.9 Control panel upper cover
4. Remove the control panel front cover. G.5.2.10 Control panel front cover
5. Remove the control panel left cover/2. G.5.2.7 Control panel left cover/2

[1]

6. Remove the harness from the wire saddle [1].
7. Disconnect the connector [2], and remove the control panel front cover assy [3].
8. Remove three screws [1], and remove the control panel front cover [2].
9. Unhook the claw [1], and remove the connector cover [2]
10. Disconnect the connector [1].

[2]

11. Remove two cable ties [1] from the control panel.
12. Remove the cable from the cable guide [2].

NOTE

- At installation of the control panel unit, insert the cable tie [1] to the hole [3] shown in the illustration.

10. Remove the harness from the wire saddle [1].
11. Remove two screws [2], and remove the metal plate [3]. NOTE

- When installing the control panel, install the shaft [4] into the hole [5] in the figure.

12. Remove three screws [1], and remove the control panel unit [2].
13. Unhook the claw [1], and remove the hinge cover [2].

14. Tilt down the hinge [1], and remove two screws [2].
15. Remove the screw [3], and remove the hinge [1].
16. To reinstall, reverse the order of removal.
17. Carry out the touch panel calibration
G.5.2.11 (1) Touch panel calibration

## (1) Touch panel calibration

- After replacing the control panel unit, you must perform the touch panel calibration. Perform one of the calibration procedures described below.
(a) Panel Calibration by using USB memory

1. Connect the USB memory containing the MFP firmware data to the service port.

For information on how to store the firmware data into a USB memory, refer to "USB memory".
2. While pressing the 'Reset' key, turn the main power switch ON.
3. As the calibration screen appears, press the Start key, perform calibration and wait for a while.
4. Confirm that the completion message. Touch [Close].
5. Turn OFF the main power switch, and remove the USB memory.

## NOTE

- Once the panel calibration has been completed, panel screen transit to the firmware writing mode and start to update automatically after 30 seconds.
(b) Panel Calibration by manual operation

1. Press [Menu] -> [Counter] -> [Display Keypad].
2. Press Stop -> Clear -> 1 -> 1 -> 6 -> 6 -> Start key, then calibration starts.
3. After 30 seconds, turn OFF the main power switch.

### 5.2.12 Original glass

1. Remove the scanner right cover. G.5.2.2 Scanner right cover
[2]

[1]
[1]

2. Remove the screw [1] each, and remove two original glass fixing brackets [2].
3. To reinstall, reverse the order of removal.
4. Carry out the [Service Mode] -> [Machine] -> [Scan Area] -> [Scanner Image Side Edge].
5. Carry out the [Service Mode] -> [Machine] -> [Scan Area] -> [Image Position: Leading Edge].

### 5.2.13 Front door

[1]

[2]
3. To reinstall, reverse the order of removal.

1. Open the front door and remove two screws [1]
2. Remove the C-clip [1], and remove the front door [2].
3. Remove three screws [1], and remove the lower front cover [2].
4. Remove 11 screws [1], and remove the front cover [2].
[1]

[2]
5. To reinstall, reverse the order of removal.

### 5.2.17 Exit tray

1. Open the front door.
2. Remove the left cover.
G.5.2.16 Left cover

## [1]

[2]
5. To reinstall, reverse the order of removal.

### 5.2.18 Rear right cover

## 1. Open the right rear cover

[1]
[2]

[1]

[2]
2. Remove three screws [1], and remove the left cover [2].
3. Remove the exit tray/1 [1].
4. Remove the exit tray/2 [2].
2. Remove the screw [1], and open the upper right rear cover [2].
3. Disconnect two connectors [1], and remove the harness from the wire saddle [2] and the harness guide.
4. Remove the screw [1], and remove the connector cover [2].

5. Remove seven screws [1], and remove the right rear cover [2] as clearing the harness.
6. To reinstall, reverse the order of removal.

### 5.2.19 Upper right cover

1. Remove the scanner right cover. G.5.2.2 Scanner right cover
[2]

[1]

[2]
2. To reinstall, reverse the order of removal.

### 5.2.2 Lower rear cover

3. To reinstall, reverse the order of removal.

### 5.2.21 Protective sheet

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
[2] [1]

2. To reinstall, reverse the order of removal.

### 5.2.22 Upper rear cover

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
[2]

[2]

3. To reinstall, reverse the order of removal.

### 5.2.23 Tray 1

1. Slide out the tray 1 , and remove the paper.
2. Remove 11 screws [1], and remove the lower rear cover [2].
3. Remove five screws [1], and remove the protective sheet [2]. NOTE

- When attaching the protective sheet, note that only the size of the screw " $A$ " is different.

3. Remove the screw [1] and four tabs [2], and remove the DF cable cover [3].
4. Remove two screws [1] and three tabs [2], and remove the upper rear cover [3].
5. Unlock the stopper [1].

6. Hold up the tray 1 [1] to remove it.

7. To reinstall, reverse the order of removal.

### 5.2.24 Tray 2

1. Slide out the tray 2 , and remove the paper.

2. Unlock the stopper [1].
3. Hold up the tray 2 [1] to remove it.

4. To reinstall, reverse the order of removal.

### 5.3 Disassembly/reassembly procedure (Units)

### 5.3.1 LED exposure unit

1. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
2. Remove the scanner upper rear cover. G.5.2.5 Scanner upper rear cover
3. Remove the scanner left cover. G.5.2.4 Scanner left cover
4. Remove the control panel left cover/1. G.5.2.6 Control panel left cover/1
5. Remove the control panel right cover. G.5.2.8 Control panel right cover
6. Remove the control panel upper cover. G.5.2.9 Control panel upper cover
7. Remove the scanner front cover. G.5.2.3 Scanner front cover
8. Remove the scanner right cover.
G.5.2.2 Scanner right cover
9. Remove the original glass.
G.5.2.12 Original glass
[1]

[1]

10. Move the LED exposure unit assy to screw access point [1].
11. Peel off seal [1].
12. Remove two screws [2] of the LED exposure unit assy [1].
13. Disconnect the flat cable [1], and remove the LED exposure unit assy [2].
14. Remove two screws [1], and remove the LED exposure unit [2].

[1]
15. To reinstall, reverse the order of removal.

NOTE

- When installing the LED exposure unit, be careful not to pinch the flat cable with the screws.
- When replacing the LED exposure unit with a brand-new one, peel the protective film from the unit after attaching it.
- When replacing the LED exposure unit, order a replacement seal (Parts number: 45811625 \#\#).

### 5.3.2 Paper feed unit

1. Slide out the tray 1 and tray 2.

2. Remove two screws [1] and the tab [2], and remove the connector cover [3]
3. Disconnect five connectors [1].
4. Remove five screws [1], and remove the paper feed unit [2].

## $\triangle$ CAUTION

- Do not supply power with the write unit (PH unit) shifted from the specified mounting position.

The laser light can enter your eye, leading to a risk of loss of eyesight.

## $\triangle$ CAUTION

- Do not disassemble or adjust the write unit (PH unit) incorporating a laser.

The laser light can enter your eye, leading to a risk of loss of eyesight.

## (1) Removal procedure

1. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box
2. Remove the front lower cover.
G.5.2.14 Front lower cover
3. Remove the left cover.
G.5.2.16 Left cover
4. Remove the exit tray.
G.5.2.17 Exit tray
5. Remove the DC power supply.
G.5.4.3 DC power supply (DCPU)
6. Remove the PH relay board.
G.5.4.13 PH relay board (PHRYB)
[1]

[1]
7. Disconnect three connectors [1] on the front side board.
8. Disconnect two connectors [1].
9. Remove the harness from the wire saddle [1]
10. Remove the flat cable from the cable clamp [2].
11. Remove seven screws [1], and remove the metal plate [2]
[2]

[1]
12. Remove two screws [1], and remove the set pin [2] for the PH unit.
13. Remove the PH unit [1].
14. To reinstall, reverse the order of removal.
15. Carry out the [Print Head Skew Reset] after selecting [Service Mode] -> [Machine] -> [Skew adjustment].
16. Carry out the [Service Mode] -> [Machine] -> [Printer Area] -> [Leading Edge Adjustment].
17. Carry out the [Service Mode] -> [Machine] -> [Printer Area] -> [Printer Image Centering Side 1].

### 5.3.4 Sub hopper unit

1. Remove the front door.
G.5.2.13 Front door
2. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box
3. Remove the front lower cover.
G.5.2.14 Front lower cover
4. Remove the front cover.
G.5.2.15 Front cover
5. Remove the toner cartridge/Y,M,C,K.
F.7.3.1 Replacing the toner cartridge
6. Remove the drum unit/Y,M,C,K.
F.7.1.1 Replacing the drum unit
7. Remove the developing unit/Y,M,C,K.
F.7.2.1 Replacing the developing unit
8. Remove the left cover.
G.5.2.16 Left cover
9. Remove the exit tray.
G.5.2.17 Exit tray
10. Remove five screws [1] of the sub hopper unit.
11. Disconnect three connectors [1], and remove the sub hopper unit [2].

12. To reinstall, reverse the order of removal.

### 5.3.5 Right door unit

1. Remove the rear right cover. G.5.2.18 Rear right cover
2. Open the right door.

[2]

3. Remove two screws [1], and remove the connector cover/1 [2].
4. Disconnect the connector [1].
5. Remove the screw [2], and remove the ground terminal [3].
6. Remove the screw [1], and remove the connector cover/2 [2].
7. Disconnect four connectors [1], and remove the harness from the wire saddle [2].
8. Remove the screw [1], and remove the ground terminal [2].

[1]
[2]
9. Draw the gauge line to the hinge mounting part [1] along the cutout of the hinge on the frame of the main body.

[2]
10. Remove three screws [1], and remove the hinge (upper section) [2].
11. Hold up the right door unit [1] to remove it.
[1]

12. To reinstall, reverse the order of removal.

## NOTE

- When installing the right door unit, align it with the guide lines drawn on the scales indicated on the machine frame. Open and close the right door to check for any interference and correct if necessary.

### 5.3.6 Manual bypass tray unit

## 1. Open the right door.

[1]

[2]

2. Remove the screw [1], and remove the shaft holder/1 [2].
3. Remove 10 screws [1], and remove the vertical transport roll assy [2].
[2]

4. Remove three screws [1], and remove the shaft holder/2 [2].
5. Remove two screws [1], and remove the right door lever assy [2].
6. Remove the screw [1], and remove the connector cover [2].
7. Disconnect four connectors [1], and remove the harness from the wire saddle [2].

[^20]
[1]
[2]

9. Remove 10 screws [2] of the manual bypass tray unit [1].
10. Remove the manual bypass tray unit [1].

[1]
11. To reinstall, reverse the order of removal.

### 5.3.7 Regist unit

1. Remove the rear right cover.
G.5.2.18 Rear right cover
2. Remove the right door unit. G.5.3.5 Right door unit
[2]

[1]

3. Disconnect the connector [1], and remove the harness from the wire saddle [2].
4. Draw the gauge line to the hinge mounting part [1] along the cutout of the hinge on the frame of the main body.
[1]

[2]
5. Remove two screws [1], and remove the hinge [2].
6. Hold up the regist unit [1] to remove it.
7. Remove the harness from the wire saddle [1].
8. Remove the harness from the edge cover [2].
9. Disconnect two connectors [3].

NOTE

- When the ferrite core [4] has been installed, be sure to install the hard disk at the position shown in the illustration.
- Ensure that the cables do not contact with the MFP board at connecting the connectors [3].
- When the security kit SC-508 has been installed, ensure that the cables do not contact with the DSC board at connecting the connectors [3].

6. Remove two screws [1], and remove two ground wires [2].
7. Remove two screws [3], and remove the hard disk assy [4].

8. Remove four screws [1].
9. Remove the plate spring [2], and remove the plate [3].
10. Remove four metal plates [2] and two connectors [3] from the hard disk [1].

11. To reinstall, reverse the order of removal.
12. Select [Service Mode] -> [State Confirmation] -> [Memory/Storage Adjustment] -> [Format], and conduct the HDD format function.
13. [Service Mode] -> [State Confirmation] -> [Memory/Storage Adjustment] -> [Storage R/W Check]

### 5.3.9 Hard disk (A) Cover type

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover

[1] [2] [1]

[1]
[1]
2. Remove the harness from the wire saddle [1]
3. Remove the harness from the edge cover [2].
4. Disconnect two connectors [3]

NOTE

- When the ferrite core [4] has been installed, be sure to install the hard disk at the position shown in the illustration.
- Ensure that the cables do not contact with the MFP board at connecting the connectors [3].
- When the security kit SC-508 has been installed, ensure that the cables do not contact with the DSC board at connecting the connectors [3].

5. Remove four screws [1], and remove the hard disk assy [2].
[2]
[1]
6. Remove three screws [1], and remove the cover [2].

[2] [3] [1]
7. Remove four screws [1].
8. Remove the plate spring [2], and remove the plate [3].
9. Remove four metal plates [2] and two connectors [3] from the hard disk [1].
[2]
[3]

10. To reinstall, reverse the order of removal.
11. Select [Service Mode] -> [State Confirmation] -> [Memory/Storage Adjustment] -> [Format], and conduct the HDD format function. 12. [Service Mode] -> [State Confirmation] -> [Memory/Storage Adjustment] -> [Storage R/W Check]

### 5.3.10 How to open the PWB box

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover

2. Remove the screw [1], and remove the connector cover [2].
[1]

[3]
[2]
3. Disconnect two connectors [1] from the PWB box side panel.
4. Remove the screw [2], and remove the connector cover [3].
[1]

[1]
[1]

### 5.3.11 Main drive unit

1. Remove the drum unit. F.7.1.1 Replacing the drum unit
2. Remove the rear right cover. G.5.2.18 Rear right cover
3. Remove the lower rear cover. G.5.2.20 Lower rear cover
4. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
5. Remove the upper rear cover. G.5.2.22 Upper rear cover
6. Open the PWB box. G.5.3.10 How to open the PWB box
7. Remove the high voltage unit. G.5.4.8 High voltage unit (HV)
8. Remove the transport motor. G.5.5.1 Transport motor (M1)
9. Remove the PC motor. G.5.5.2 PC motor (M2)
10. Remove the developing motor. G.5.5.14 Developing motor (M21)
[2]

[1]
11. Remove six screws [1] from the PWB box side panel.
12. Remove three screws [1] from the PWB box front panel. NOTE
" Note that only the size of the screw " $A$ " is different.
13. Disconnect the connector [1].
14. Open the PWB box [2].
15. Remove the screw [1].
16. Remove the harness guide [2] as clearing the harness.

[1]

[2]
[1]

[1]

[2]
[2]

[1]
17. Remove four screws [1], and remove the metal plate [2].
18. Remove the harness from the three wire saddles [1].
19. Disconnect the connector [2].
20. Remove the harness from six wire saddles [1] and four edge covers [2].
21. Remove four screws [1].
22. Remove the reinforcing plate [2] as clearing the harness.

[1]

[2]
[1]

[2]

[3]
23. Remove two solderless terminals [1]
24. Remove two screws [1], and remove the harness guide [2].
25. Remove two screws [1], and remove the bracket [2].
26. Remove the harness from harness guide [1].
27. Remove four screws [1], and remove the harness from the harness guide.
28. Remove the harness from two wire saddles [2].

NOTE

- Make sure not to lose the spring [3].

28. To reinstall, reverse the order of removal.

### 5.3.12 Transport unit

1. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box
2. Remove the transfer belt unit.
F.7.4.3 Replacing the transfer belt unit
3. Remove the front door.
G.5.2.13 Front door
4. Remove the front lower cover G.5.2.14 Front lower cover
5. Remove the front cover. G.5.2.15 Front cover
[2]

6. Open the right door and the regist unit.

[2]

[3]
7. To reinstall, reverse the order of removal.
8. Remove nine screws [1], and remove the harness from the wire saddle [2].
9. Remove the main drive unit [3]
10. Remove the harness from four wire saddles [1].
11. Disconnect two connectors (CN8, CN11) [2] on the front side board.
12. Remove the screw [1], and remove the stopper [2].
13. Remove the screw [1], and remove the plate spring [2].
14. Remove three screws [3], and remove the transport unit [4]. NOTE

- When removing the transport unit [4], be careful not to damage or deform the guide sheet of the tray 1 paper feed unit.

### 5.3.13 Fusing drive unit

1. Remove the fusing unit.
F.7.9.1 Replacing the fusing unit
2. Remove the rear right cover.
G.5.2.18 Rear right cover
3. Remove the lower rear cover. G.5.2.20 Lower rear cover
4. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
5. Remove the upper rear cover. G.5.2.22 Upper rear cover
6. Open the PWB box.
G.5.3.10 How to open the PWB box
7. Remove the toner cartridge cooling fan.
G.5.7.4 Toner cartridge cooling fan (FM4)
8. Remove the fusing motor.
G.5.5.3 Fusing motor (M3)
9. Remove the fusing pressure motor.
G.5.5.11 Fusing pressure motor (M11)
10. Remove the transport motor.
G.5.5.1 Transport motor (M1)
11. Remove the PC motor.
G.5.5.2 PC motor (M2)
12. Remove the developing motor.
G.5.5.14 Developing motor (M21)

13. Remove four screws [1], and remove the paper cooling fan assy [2].
14. Remove the screw [1].
15. Remove the harness guide [2] as clearing the harness.
16. Disconnect the connector [1].

[1]

[2]

[2]

[1]
[2]

[2]

[1]
17. Remove four screws [1], and remove the metal plate [2].
18. Remove the harness from six wire saddles [1] and four edge covers [2].
19. Remove four screws [1].
20. Remove the reinforcing plate [2] as clearing the harness.
21. Remove the screw [1], and remove two tabs [2].
22. Remove the harness from the wire saddle [1].
23. Remove the harness and cables together with the harness guide [2].
[2]

[1]
[2]

[1]

[1]
[2]
[1]
24. To reinstall, reverse the order of removal.

### 5.3.14 Hopper drive unit

1. Remove the toner cartridge. F.7.3.1 Replacing the toner cartridge
2. Remove the rear right cover. G.5.2.18 Rear right cover
3. Remove the lower rear cover. G.5.2.20 Lower rear cover
4. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
5. Remove the upper rear cover. G.5.2.22 Upper rear cover
6. Remove the left cover. G.5.2.16 Left cover
7. Remove the exit tray. G.5.2.17 Exit tray
8. Open the PWB box. G.5.3.10 How to open the PWB box
9. Toner cartridge cooling fan G.5.7.4 Toner cartridge cooling fan (FM4)
10. Remove the transport motor.
G.5.5.1 Transport motor (M1)
11. Remove the PC motor.
12. Disconnect two connectors [1]
13. Remove the harness from the wire saddle [2].
14. Remove the E-ring [1] each, and remove two gears [2].
15. Remove the E-ring [1], and remove the flange [2] 28. Remove the belt [3] from the gear.
16. Remove six screws [1], and remove the fusing drive unit [2].

## G.5.5.2 PC motor (M2)

12. Remove the developing motor. G.5.5.14 Developing motor (M21)
[2]

[1]

[2]

[2]
[2]

[1]
13. Remove the screw [1].
14. Remove the harness guide [2] as clearing the harness.
15. Disconnect the connector [1].
16. Remove four screws [1], and remove the metal plate [2].
17. Remove the harness from six wire saddles [1] and four edge covers [2].
18. Remove four screws [1].
19. Remove the reinforcing plate [2] as clearing the harness.
20. Remove the screw [1].

[1]
21. Remove the toner cartridge motor/ $\mathrm{Y}, \mathrm{M}, \mathrm{C}$. G.5.5.10 Toner cartridge motor/Y,M,C (M10)
22. Remove the toner supply motor/C. G.5.5.7 Toner supply motor/C (M7)
23. Remove the toner cartridge motor/K. G.5.5.15 Toner cartridge motor/K (M25)
24. Remove the toner supply motor/M. G.5.5.8 Toner supply motor/M (M8)
25. Remove the toner supply motor/Y. G.5.5.9 Toner supply motor/Y (M9)

[3]

[1]

26. Remove the screw [1] and the tab [2], and remove the harness guide [3]
27. Remove the connector [1] to move the harness out of the working area.
28. Remove the screw [1], and remove the cover [2].
29. Remove two screws [3], and remove the cover [4]

30. To reinstall, reverse the order of removal.

### 5.4 Disassembly/reassembly procedure (Boards)

### 5.4.1 CCD board (CCDB)

(1) Removal procedure

1. Remove the scanner right cover. G.5.2.2 Scanner right cover
2. Remove the original glass. G.5.2.12 Original glass

[1]

[1]
3. Remove five screws [1], and remove the CCD board protective shield [2].
4. Disconnect three connectors [1].
5. Remove the screw [1] each, and remove two retainer plates [2].
6. Remove the CCD board [3].
(2) Reinstall procedure

7. Check the mark [1] on lens of the CCD board. NOTE

- The mark is be "-", " 0 ", or " + ".

2. Install the CCD board [1] to the main body.
3. Set the scale [2] of the CCD board to the same position as the mark checked on step 1, and secure it with two retainer plates [3] and the screw [4] at two points.
4. For the rest of the mounting procedure, reverse the order of removal.
5. Reinstall the original glass.
6. Turn ON the main power switch.
7. Set the [Service Mode] -> [System 2] -> [CCD Calibration] to [OFF].
8. Set the [Service Mode] -> [System 2] -> [Line Mag Setting] to [OFF].
9. Carry out the [Service Mode] -> [Machine] -> [Printer Area] -> [Paper Feed Direction Adj.].
10. Carry out the [Service Mode] -> [Machine] -> [Scan Area] -> [Main Scan Zoom Adj.]. If the specifications are not met, loosen the CCD board mounting screws and move the CCD board in the sub scan direction as necessary.
NOTE

- Hold the CCD board by hand when moving it. NEVER use a screwdriver or similar tool to tap to move it, as a varied distance between the CCD sensor and lens results.

11. Carry out the [Service Mode] -> [Machine] -> [Scan Area] -> [Scanner Image Side Edge].

### 5.4.2 Tray 1 CD paper size board (CDPSB/1), tray 2 CD paper size board (CDPSB/2)

## NOTE

- The tray 1 CD paper size board and the tray $2 C D$ paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 1 CD paper size board.

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Open the PWB box.
G.5.3.10 How to open the PWB box
3. Remove the high voltage unit.
G.5.4.8 High voltage unit (HV)
4. Slide out the tray 1.

5. Disconnect the connector [1], and remove the harness from the harness guide [2].
[2]

[1]

## [1]

[2]
9. To reinstall, reverse the order of removal.

### 5.4.3 DC power supply (DCPU)

1. Remove the left cover.
G.5.2.16 Left cover
2. Remove the exit tray. G.5.2.17 Exit tray

3. Remove screw [1] and spring [2].
4. Remove the connector [1], and remove the tray 1 CD paper size board assy [2].
5. Remove the screw [1], and remove the tray 1 CD paper size board [2].
6. Remove six screws [1], and remove the DC power supply protective shield [2].
7. Disconnect the connector [1].
8. Remove two screws [2], and remove the power supply cooling fan assy [3].

9. Remove the cable from two wire saddles [1].
10. Disconnect all connectors on the DC power supply.

[1]

11. To reinstall, reverse the order of removal.

### 5.4.4 EEPROM/1, EEPROM/2

## NOTE

- Never use the combination of the used EEPROM removed from another machine and the original MFP board. This combination causes corruption of stored data.
Note that the combination of the original EEPROM and the used MFP board removed from another machine also causes the same problem.
- Always replace the EEPROM/1 and EEPROM/2 as a set.

Replace them one at a time to prevent a mix-up between new and old and the device positions.

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the protective sheet.
G.5.2.21 Protective sheet
3. Remove the hard disk (A).
G.5.3.9 Hard disk (A) Cover type
4. Remove the optional hard disk (B) HD-524 if it is installed.
G.8.33.2 Hard disk (B) (HD-524: Cover type) (bizhub C368/C308/C258)
5. Mark the EEPROM/1.

NOTE

- Mark the EEPROMs to distinguish old from new, and mark EEPROM/1 and EEPROM/2 to distinguish from each other. Marks should be helpful to making easy distinction regardless of the style of them.
[1]

[^21]
## NOTE

- Mark the EEPROMs to distinguish old from new, and mark EEPROM/1 and EEPROM/2 to distinguish from each other. Marks should be helpful to making easy distinction regardless of the style of them.

8. Remove the EEPROM/2 [1].

[1]
9. To reinstall, reverse the order of removal.

NOTE

- When mounting EEPROM, align the notches (indicated by " A " in the illustration).
NOTE
Since the counter will be cleared when the EEPROM is replaced with a new one, replace the following parts with new ones.
Configure [New Release] in Service Mode before replacing the transfer belt unit and the fusing unit. Besides, configure [Counter clear] before replacing the transfer roller.
- Developing unit/Y,M,C,K
- Drum unit/Y,M,C,K
- Toner cartridge/Y,M,C,K
- Transfer belt unit
- Fusing unit
- Transfer roller
- Feed roller, pick-up roller, separation roller (including options)

NOTE

- When the new EEPROM is installed, the error message: "License management error occurred." is displayed. Conduct the i-Option recovery operation.

10. Open the front door and turn on the main power supply switch.
11. Enter the Service Mode. Make individual adjustments shown in Table 1: Readjustment item in the order listed, using the machine maintenance list and the adjustment lists that were output at the time of main body installation and maintenance.

## NOTE

- Ensure the front door is opened.

NOTE

- Conduct the readjustment of the above adjustment items before the starting the initial warm-up operation after replacing the EEPROMs.

12. Turn off the main power switch.
13. Turn on the main power switch and close the front door. Check to see that warm-up and image stabilization operations are completed normally.
14. Enter the Service Mode again. Make individual adjustments shown in the Table 2: Readjustment item in the order listed, using the machine management list and the adjustment lists that were output at the time of main body installation and maintenance.
Table 1: Readjustment item

| Adjustment items | Service mode readjustment items |  |  | Ref. Page |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Machine | Color Registration Adjustment | Cyan | I.5.4.8 Color Registration Adjustment |
| 2 |  |  | Magenta |  |
| 3 |  |  | Yellow |  |
| 4 | Imaging Process Adjustment | Image Background Adj |  | I.5.6.5 Image Background Adj |
| 5 |  | Max Image Density Adj |  | I.5.6.4 Max Image Density Adj |
| 6 |  | Grad/Dev AC Bias V Selection |  | I.5.6.13 Grad/Dev AC Bias V Selection |
| 7 | System 1 | Change Warm Up Time |  | Warm-up |
| 8 | Imaging Process Adjustment | Charge AC Output fine adjustment |  | I.5.6.11 Charge AC Output fine adjustment |
| 9 | System 2 | Unit Change | Warning Display | I.5.16.5 Unit Change |

Table 2: Readjustment item

| Adjustment <br> items |  | Service mode readjustment items | Ref. Page |
| :---: | :--- | :--- | :---: |
| 1 | Machine | Manual Bypass Tray Width Adj | I.5.4.11 Manual Bypass Tray <br> Width Adj |
| 2 |  | Printer Reg. Loop Adj. | I.5.4.7 Printer Reg. Loop Adj. |
|  |  | Fusing Temperature | I.5.4.2 Fusing Temperature |

| 4 | Finisher | FS-FN Adjustment |  | I.5.29 Finisher |
| :---: | :---: | :---: | :---: | :---: |
| 5 | Machine | Printer Area | Paper Feed Direction Adj. | I.5.4.5 (5) Paper Feed Direction Adj. |
| 6 |  | Fusing Transport Speed |  | I.5.4.3 Fusing Transport Speed |
| 7 |  | Printer Area | Printer Image Centering Side 1 | I.5.4.5 (2) Printer Image Centering Side 1 |
| 8 |  |  | Prt. Image Center. Side 2 (Dup) | I.5.4.5 (4) Prt. Image Center. Side 2 (Dup) |
| 9 |  |  | Leading Edge Adjustment | I.5.4.5 (1) Leading Edge Adjustment |
| 10 |  |  | Leading Edge Adj. Side 2 (Duplex) | I.5.4.5 (3) Leading Edge Adj. Side 2 (Duplex) |
| 11 |  |  | Tray Printing Position: Tip | I.5.4.5 (6) Tray Printing Position: Tip |
| 12 | Imaging Process Adjustment | Transfer Voltage Fine Adj | 2nd Transfer Adj. | I.5.6.10 (2) 2nd Transfer Adj. |
| 13 |  |  | Primary transfer adj. | I.5.6.10 (1) Primary transfer adj. |

### 5.4.5 eMMC board (eMMC)

## NOTE

- Never use the combination of the used eMMC board removed from another machine and the original MFP board. This combination causes corruption of stored data.
Note that the combination of the original eMMC board and the used MFP board removed from another machine also causes the same problem.

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. If an optional security kit SC-508 is mounted, remove the DSC board/2. G.8.27.2 DSC board/2 (for back side) (SC-508) (bizhub C368/C308/C258)
3. If an optional dual scan document feeder DF-704 is mounted, remove the dual scan image processing board. G.8.4.11 dual scan image processing board (DSIPB) (DF-704)
4. If an optional security kit SC-508 is mounted, remove the DSC board/1.
G.8.27.1 DSC board/1 (for front side) (SC-508) (bizhub C368/C308/C258)
5. Release the lock of the eMMC board [1].

## [1]

## NOTE

- Be careful not to drop the eMMC board.
[1]

7. To reinstall, reverse the order of removal

### 5.4.6 Tray 1 FD paper size board (FDPSB/1), tray 2 FD paper size board (FDPSB/2)

NOTE

- The tray 1 FD paper size board and the tray 2 FD paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 1 FD paper size board

1. Remove the tray 1. G.5.2.23 Tray 1
2. Remove the tray 2.
G.5.2.24 Tray 2

3. To reinstall, reverse the order of removal.

### 5.4.7 Front side board (FRB)

1. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box
2. Remove the front door.
G.5.2.13 Front door
3. Remove the front lower cover.
G.5.2.14 Front lower cover
4. Remove the front cover.
G.5.2.15 Front cover

[1]
[2]
5. To reinstall, reverse the order of removal.

### 5.4.8 High voltage unit (HV)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Open the PWB box. G.5.3.10 How to open the PWB box
3. Disconnect the connector [1].
4. Remove the screw [2] and three tabs [3], and remove the tray 1 FD paper size board assy [4].
5. Remove three tabs [1], and remove the Tray 1 FD paper size board [2].
6. Disconnect all connectors on the front side board.
7. Remove six screws [1], and remove the front side board [2].
8. Disconnect all connectors and solderless terminals on the high voltage unit.

[1]

[1]
[1]

[2]
9. To reinstall, reverse the order of removal.

### 5.4.9 Machine condition monitor board (MCMB)

1. Remove the control panel right cover.
G.5.2.8 Control panel right cover

[1]

[2]
2. Remove four screws [1] of the high voltage unit. NOTE

- When installing the high voltage unit, tighten the screws in the order shown in the illustration.

5. Unhook the tab [1], and remove the high voltage unit [2].

NOTE

- When mounting the high voltage unit, the terminal contact point must be contacted without fail. The claw also must be firmly hooked.

[^22]3. Remove five screws [1] from the control panel front cover [2] and remove the cover by releasing the tabs

7. To reinstall, reverse the order of removal.

### 5.4.10 MFP board (MFPB)

## NOTE

- Never use the combination of the used MFP board removed from another machine and the original eMMC board or EEPROM. This combination causes corruption of stored data. Note that the combination of the original MFP board and the used eMMC board or EEPROM removed from another machine also causes the same problem.
- Do not replace the MFP board and the eMMC board or EEPROM with new ones at the same time.

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the protective sheet.
G.5.2.21 Protective sheet
3. Remove the hard disk (A) G.5.3.9 Hard disk (A) Cover type
4. If an optional security kit SC-508 is mounted, remove the DSC board/2. G.8.27.2 DSC board/2 (for back side) (SC-508) (bizhub C368/C308/C258)
5. If an optional dual scan document feeder DF-704 is mounted, remove the dual scan image processing board. G.8.4.11 dual scan image processing board (DSIPB) (DF-704)
6. If an optional security kit SC-508 is mounted, remove the DSC board/1
G.8.27.1 DSC board/1 (for front side) (SC-508) (bizhub C368/C308/C258)
7. If an optional FAX kit FK-514 is mounted, remove the FAX board
G.8.32.1 FAX Kit (Line1), FAX Kit (Line2) (FK-514)
8. Remove the optional upgrade kit UK-211 if it is installed G.8.28.1 Upgrade kit (UK-211)
9. Remove the optional hard disk (B) HD-524 if it is installed G.8.33.2 Hard disk (B) (HD-524: Cover type) (bizhub C368/C308/C258)
10. Remove the harness from two wire saddles [1].

[1]
11. Remove all connectors and flat cables on the MFP board.

12. Remove six screws [1], and remove the plate [2].
13. Remove the screw [1] and two bolts [2] of the MFP board side panel.
14. Remove 10 screws [1], and remove the MFP board [2].
15. NOTE

- After replacing the MFP board (MFPB), transfer EEPROM/1 and EEPROM/2.
- Mark the EEPROMs to before replacing. Mark the EEPROMs to distinguish old from new, and mark EEPROM/1 and EEPROM/2 to distinguish from each other.
- Marks should be helpful to making easy distinction regardless of the style of them.
- When replacing EEPROM/1 [1], EEPROM/2 [2], replace them one at a time to prevent a mix-up in the device positions.
- When mounting EEPROM , align the notches (indicated by " $A$ " in the illustration).

17. After replacing the board, enter the machine type information. G.5.4.11 Entering the machine type information
18. Turn OFF the main power switch.
19. Wait 10 seconds, turn ON the main power switch.
20. After entering the machine type information, install the firmware. J.3.2 Procedure
21. Turn OFF the main power switch, and remove the USB memory.
22. Wait 10 seconds, turn ON the main power switch and wait 2 minutes until boot up the machine completely

23. Wait until [Recover Data] [1] appears. (MFP will reboot maximum 2 times by itself, it may take 5 minutes.)

24. Touch [Recover Data] and [Yes].
25. Turn OFF the main power switch, wait 10 seconds, then turn ON the main power switch, after "Turn the main switch OFF and ON." message is appeared.

### 5.4.11 Entering the machine type information

- When MFP board is replaced, it is necessary to enter the machine type information.
- Refer to the following procedures to enter the machine type information.

## (1) Procedure

1. Insert the USB memory to the USB port.
2. Turn the main power switch ON while pressing the Stop key.
3. Touch [Machine Type Select].

[^23]
5. Touch [OK], and turn OFF the main power switch.

Table: Machine type information

| First four digits of <br> the serial number | A7PU | A7PY | A7R0 |
| :--- | :--- | :--- | :--- |
| [Machine $]$ | 6 | 6 | 6 |
| [Type $]$ | 1 | 2 | D |

### 5.4.12 Tray 1 empty indicator board (PEIB/1), tray 2 empty indicator board (PEIB/2)

1. Slide out the tray 1 and the tray 2.

[1]
[1] [2] [3] [1]

[2] [1]
[4][1]
2. To reinstall, reverse the order of removal.

### 5.4.13 PH relay board (PHRYB)

1. Remove the left cover.
G.5.2.16 Left cover
2. Remove the exit tray.
G.5.2.17 Exit tray
3. Remove the DC power supply. G.5.4.3 DC power supply (DCPU)
4. Remove two screws [1], and remove the tray right cover [2].
5. Unhook two tabs [1] each. Disconnect the connector [2] each, and remove the tray 1 empty indicator board [3] and the tray 2 empty indicator board [4].
6. Disconnect all flat cables on the PH relay board.

[2]

[1]
[1]
7. To reinstall, reverse the order of removal.

### 5.4.14 Scanner drive board (SCDB)

1. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
2. Remove the scanner upper rear cover.
G.5.2.5 Scanner upper rear cover

[1]

[2]
3. To reinstall, reverse the order of removal.

### 5.5 Disassembly/reassembly procedure (Motors)

### 5.5.1 Transport motor (M1)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Open the PWB box.
G.5.3.10 How to open the PWB box

3. Remove four screws [1]. Disconnect the connector [2], and remove the
transport motor [3].
4. To reinstall, reverse the order of removal.

NOTE

- When installing the motor, use care not to mistake in the kind of the mounting screws (M3x6mm).

### 5.5.2 PC motor (M2)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Open the PWB box.
G.5.3.10 How to open the PWB box

3. Remove four screws [1]. Disconnect the connector [2], and remove the PC motor [3].
4. To reinstall, reverse the order of removal. NOTE

- When installing the motor, use care not to mistake in the kind of the mounting screws (M3x6mm).

### 5.5.3 Fusing motor (M3)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
3. Remove the upper rear cover.
G.5.2.22 Upper rear cover
[1]

4. Remove the harness from harness guide [1].
5. Remove the screw [1], and remove the harness guide [2].

6. Remove four screws [1]. Disconnect the connector [2], and remove the fusing
motor [3].
7. To reinstall, reverse the order of removal.

NOTE

- When installing the motor, use care not to mistake in the kind of the mounting screws (M3x6mm).

### 5.5.4 Switchback motor (M4)

(1) Removal procedure

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
3. Remove the upper rear cover.
G.5.2.22 Upper rear cover
4. Remove the rear right cover. G.5.2.18 Rear right cover

[2]

[2]
[1]
5. Remove four screws [1], and remove the paper cooling fan assy [2].
6. Remove the screw [1], and remove two tabs [2].
7. Remove the harness from the wire saddle [1].
8. Remove the harness guide [2] as clearing the harness.

[2]

## (2) Reinstall procedure

1. Remove the scanner right cover.
G.5.2.2 Scanner right cover
2. Remove the upper right cover.
G.5.2.19 Upper right cover

[1]

3. Attach it in reversed procedures of removal.

### 5.5.5 ADU transport motor (M5)

1. Open the right door.

[2]

[3]
2. Remove two screws [1]. Disconnect the connector [2], and remove the switchback motor [3].
3. Remove the screw [1], and remove the cover [2].
4. Attach the drive belt [1] to the gear of the switchback motor.
5. Remove two screws [1], and remove the gear cover [2].
6. Disconnect the connector [1].
7. Remove the screw [2], and remove the ground terminal [3].

8. Remove seven screws [1], and remove the ADU transport assy [2].
9. Remove five screws [1], and remove the guide [2].
10. Remove three screws [1] to release the ADU transport motor assy [2].
11. Remove two screws [1]. Disconnect the connector [2], and remove the ADU transport motor [3].
12. To reinstall, reverse the order of removal.

### 5.5.6 Toner supply motor/K (M6)

1. Remove the front door. G.5.2.13 Front door
2. Remove the front lower cover. G.5.2.14 Front lower cover
3. Remove the front cover. G.5.2.15 Front cover
4. Remove the toner cartridge/ $\mathrm{Y}, \mathrm{M}, \mathrm{C}, \mathrm{K}$. F.7.3.1 Replacing the toner cartridge
5. Remove the drum unit/Y,M,C,K. F.7.1.1 Replacing the drum unit
6. Remove the developing unit/Y,M,C,K. F.7.2.1 Replacing the developing unit
7. Remove the left cover.
G.5.2.16 Left cover
8. Remove the exit tray.
G.5.2.17 Exit tray
9. Remove the sub hopper unit. G.5.3.4 Sub hopper unit
[2]

[1]
10. To reinstall, reverse the order of removal.

### 5.5.7 Toner supply motor/C (M7)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
3. Remove the upper rear cover. G.5.2.22 Upper rear cover

4. To reinstall, reverse the order of removal.

### 5.5.8 Toner supply motor/M (M8)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
3. Remove the upper rear cover G.5.2.22 Upper rear cover

4. To reinstall, reverse the order of removal
5. Remove the screw [1], and remove the toner supply motor/K [2].
6. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/C [3].
NOTE

- When removing the toner supply motor/C [3], make sure to turn it in the direction shown in the illustration.

4. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/M [3].

## NOTE

- When removing the toner supply motor/M [3], make sure to turn it in the direction shown in the illustration.

### 5.5.9 Toner supply motor/Y (M9)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
3. Remove the upper rear cover

## G.5.2.22 Upper rear cover

[2]

[2] [3] [1]

6. To reinstall, reverse the order of removal.

### 5.5.10 Toner cartridge motor/Y,M,C (M10)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
3. Remove the upper rear cover. G.5.2.22 Upper rear cover
[1] [2] [3]

4. To reinstall, reverse the order of removal.

### 5.5.11 Fusing pressure motor (M11)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
3. Remove the upper rear cover. G.5.2.22 Upper rear cover

[1]
4. To reinstall, reverse the order of removal.
5. Remove two screws [1], and remove the cover [2].
6. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/Y [3].
NOTE

- When removing the toner supply motor/Y [3], make sure to turn it in the direction shown in the illustration.

4. Remove the screw [1]. Disconnect the connector [2], and remove the toner cartridge motor/Y,M,C [3].

## NOTE

- When removing the toner cartridge motor/Y,M,C [3], make sure to turn it in the direction shown in the illustration.

4. Remove two screws [1]. Disconnect the connector [2], and remove the fusing pressure motor [3].

### 5.5.12 Tray 1 lift-up motor (M12)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. How to open the PWB box G.5.3.10 How to open the PWB box
3. Remove the high voltage unit. G.5.4.8 High voltage unit (HV)
4. Slide out the tray 1.

5. To reinstall, reverse the order of removal.

### 5.5.13 Tray 2 lift-up motor (M13)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. How to open the PWB box G.5.3.10 How to open the PWB box
3. Remove the high voltage unit. G.5.4.8 High voltage unit (HV)
4. Slide out the tray 2.
[2]

5. To reinstall, reverse the order of removal.
5.5.14 Developing motor (M21)
6. Remove the lower rear cover.
G.5.2.20 Lower rear cover
7. Open the PWB box.
G.5.3.10 How to open the PWB box

[2] [1]
8. To reinstall, reverse the order of removal.

## NOTE

- When installing the motor, use care not to mistake in the kind of the mounting screws (M3x6mm).

### 5.5.15 Toner cartridge motor/K (M25)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
3. Remove the upper rear cover. G.5.2.22 Upper rear cover

4. To reinstall, reverse the order of removal.

### 5.5.16 Scanner motor (M201)

(1) Removal procedure

1. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
2. Remove the scanner right cover. G.5.2.2 Scanner right cover
3. Remove the scanner upper rear cover. G.5.2.5 Scanner upper rear cover

[2]
[1]
[2]

[3]
[1]
[1]

[2]
4. Remove the screw [1]. Disconnect the connector [2], and remove the toner cartridge motor/K [3].
NOTE

- When removing the toner cartridge motor/K [3], make sure to turn it in the direction shown in the illustration.

5. Remove the spring [1] and the belt [2], and remove the scanner motor assy [3].
6. Remove two screws [1], and remove the scanner motor [2].
(2) Reinstall procedure

7. Attach the spring [3] to the scanner motor assy [1].
8. Temporarily secure the scanner motor assy [1] with three screws [2]. NOTE

- The screws [2] should be temporarily tightened to a degree that the position of the motor can be adjusted by the spring force.
- When installing the scanner motor, make sure that the scanner motor is disconnected with the connector.

3. Attach the drive belt [2] to the pulley [1] and the gear of scanner motor.
4. Move the scanner motor assy [3] in the direction shown in the illustration for two to three times, then make sure that it runs smoothly. NOTE

- Make sure that the drive belt [2] is properly kept tight by the spring [4] force.
- If the deflection or tension of the drive belt [2] is excessive, the scanner unit does not work correctly. This may result in trouble.
- Make sure that the drive belt [2] is attached to the pulley [1] correctly.

5. Tighten three screws [1] in the order shown in the illustration to fix the scanner motor assy.
NOTE

- When tightening the screw [1], make sure that the scanner motor assy is not touched.
- After securing the scanner motor assy, check again that the deflection and tension of the drive belt [2] are not excessive.

6. Connect the connector [3] to the scanner motor.

### 5.6 Disassembly/reassembly procedure (Clutches)

### 5.6.1 Tray 2 paper feed clutch (CL1)

1. Remove the paper feed unit. G.5.3.2 Paper feed unit
2. Remove the E-ring [1].

[2]

[1]
[1]

[2]

[1]
[2]
[1]

[2]
3. To reinstall, reverse the order of removal.

### 5.6.2 Tray 2 vertical transport clutch (CL2)

1. Remove the paper feed unit. G.5.3.2 Paper feed unit
2. Remove two screws [1], and remove the gear cover [2].
3. Remove the gear [1].
4. Remove the gear [1].
5. Disconnect the connector [1], and remove the harness from two wire saddles [2].
6. Remove the E-ring [1], and remove the tray 2 paper feed clutch [2]. NOTE

- When mounting the tray 2 paper feed clutch [2], set the convex part of the stopper into the concave part of the tray 2 paper feed clutch.
[1]

[1] [1]

[2]

[1]
[2]

[1]
[2]

[1]

7. To reinstall, reverse the order of removal.

### 5.6.3 Tray 1 paper feed clutch (CL3)

1. Remove the paper feed unit. G.5.3.2 Paper feed unit
2. Remove the E-ring [1].
3. Remove two screws [1], and remove the gear cover [2].
4. Remove the gear [1].
5. Disconnect the connector [1], and remove the harness from two wire saddles [2].
6. Remove the E-ring [1], and remove the tray 2 vertical transport clutch [2]. NOTE

- When mounting the tray 2 vertical transport clutch [2], set the convex part of the stopper into the concave part of the tray 2 vertical transport clutch.

5. To reinstall, reverse the order of removal.

### 5.6.4 Registration clutch (CL4)

1. Remove the waste toner box. F.7.6.1 Replacing the waste toner box
2. Remove the transfer belt unit.
F.7.4.3 Replacing the transfer belt unit
3. Remove the front door.
G.5.2.13 Front door
4. Remove the front lower cover.
G.5.2.14 Front lower cover
5. Remove the front cover
G.5.2.15 Front cover
6. Remove the transport unit. G.5.3.12 Transport unit
[1]

[2]
[3]
7. To reinstall, reverse the order of removal.

### 5.6.5 1st transfer pressure clutch (CL5)

1. Remove the fusing unit. F.7.9.1 Replacing the fusing unit
2. Remove the rear right cover. G.5.2.18 Rear right cover
3. Remove the lower rear cover. G.5.2.20 Lower rear cover
4. Remove two screws [1], and remove the cover [2].
5. Disconnect the connector [1], and remove the harness from two wire saddles [2].
6. Remove the E-ring [1], and remove the tray 1 paper feed clutch [2].

NOTE

- When mounting the tray 1 paper feed clutch [2], set the convex part of the stopper into the concave part of the tray 1 paper feed clutch.

7. Remove the E-ring [2]. Disconnect the connector [1], and remove the registration clutch [3].
NOTE

- When mounting the registration clutch, set the convex part of the stopper into the concave part of the registration clutch [3].

4. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
5. Remove the upper rear cover. G.5.2.22 Upper rear cover
6. Open the PWB box. G.5.3.10 How to open the PWB box
7. Remove the toner cartridge cooling fan. G.5.7.4 Toner cartridge cooling fan (FM4)
8. Remove the fusing motor
G.5.5.3 Fusing motor (M3)
9. Remove the fusing pressure motor G.5.5.11 Fusing pressure motor (M11)
10. Remove the fusing pressure motor. G.5.5.11 Fusing pressure motor (M11)
11. Remove the transport motor. G.5.5.1 Transport motor (M1)
12. Remove the PC motor. G.5.5.2 PC motor (M2)
13. Remove the developing motor. G.5.5.14 Developing motor (M21)
14. Remove the fusing drive unit. G.5.3.13 Fusing drive unit

## [6]

[3] [4] [1] [2]
17. To reinstall, reverse the order of removal.

### 5.6.6 ADU transport clutch (CL6)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
3. Remove the upper rear cover G.5.2.22 Upper rear cover
4. Remove the rear right cover. G.5.2.18 Rear right cover
5. Open the PWB box. G.5.3.10 How to open the PWB box
6. Remove the high voltage unit. G.5.4.8 High voltage unit (HV)
7. Remove the transport motor. G.5.5.1 Transport motor (M1)
8. Remove the PC motor. G.5.5.2 PC motor (M2)
9. Remove the developing motor. G.5.5.14 Developing motor (M21)
[2]

[1]
10. Remove the harness from the wire saddle [1] and the edge cover [2].
11. Remove the E-ring [3] and the bushing [4], and remove the 1st transfer pressure clutch [6] while pulling out the shaft [5].

## NOTE

- When mounting the 1st transfer pressure clutch [6], set the convex part of the stopper into the concave part of the 1st transfer pressure clutch.

10. Remove the screw [1].
11. Remove the harness guide [2] as clearing the harness.

[1]

[2]
[1]

[1]

[2]
[2]

[1]
12. Remove four screws [1], and remove the metal plate [2].
13. Remove the harness from the three wire saddles [1].
14. Disconnect the connector [2].
15. Remove the harness from six wire saddles [1] and four edge covers [2].
16. Remove four screws [1].
17. Remove the reinforcing plate [2] as clearing the harness.

[1]

[2]
[2] [4] [3]

[1]
[2]

[1]
18. To reinstall, reverse the order of removal.

### 5.6.7 Bypass paper feed clutch (CL7)

1. Open the right door.
[1]

[2]
2. Remove two solderless terminals [1]
3. Remove two screws [1], and remove the harness guide [2].
4. Remove the E-ring [1].
5. Remove two screws [2], and remove the metal plate [3] and bushing [4].
6. Remove the ADU transport clutch [1].
7. Remove the screw [1], and remove the connector cover [2].

## [1]

[1]

[2]
5. To reinstall, reverse the order of removal.

### 5.6.8 Paper exit clutch (CL8)

1. Remove the fusing unit.
F.7.9.1 Replacing the fusing unit
2. Remove the rear right cover. G.5.2.18 Rear right cover
3. Remove the lower rear cover. G.5.2.20 Lower rear cover
4. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
5. Remove the upper rear cover G.5.2.22 Upper rear cover
6. Open the PWB box. G.5.3.10 How to open the PWB box
7. Remove the toner cartridge cooling fan. G.5.7.4 Toner cartridge cooling fan (FM4)
8. Remove the fusing motor. G.5.5.3 Fusing motor (M3)
9. Remove the fusing pressure motor. G.5.5.11 Fusing pressure motor (M11)
10. Remove the transport motor. G.5.5. 1 Transport motor (M1)
11. Remove the PC motor G.5.5.2 PC motor (M2)
12. Remove the developing motor. G.5.5.14 Developing motor (M21)
13. Remove the fusing drive unit. G.5.3.13 Fusing drive unit

[1]
[3]
[2]
14. To reinstall, reverse the order of removal.
15. Disconnect the connector [1], and remove the harness from two wire saddles [2] and the edge cover [3].
16. Remove the E-ring [1], and remove the bypass paper feed clutch [2]. NOTE

- When mounting the bypass paper feed clutch, set the convex part of the stopper into the concave part of the bypass paper feed clutch [2].

14. Remove the harness from the edge cover [1].
15. Remove the E-ring [2] and the bushing [3], and remove the paper exit clutch [5] while pulling out the shaft [4].
NOTE

- When mounting the paper exit clutch, set the convex part of the stopper into the concave part of the paper exit clutch [5].

### 5.7 Disassembly/reassembly procedure (Fans)

### 5.7.1 Power supply cooling fan (FM1)

1. Remove the left cover.
G.5.2.16 Left cover
2. Remove the exit tray.
G.5.2.17 Exit tray
[1]

[3]

[1]

3. To reinstall, reverse the order of removal.

### 5.7.2 Transfer belt cleaner cooling fan (FM2)

1. Remove the front door.
G.5.2.13 Front door
2. Remove the front lower cover.
G.5.2.14 Front lower cover
3. Remove the front cover.
G.5.2.15 Front cover
4. Remove the left cover.
G.5.2.16 Left cover
5. Remove the exit tray.
G.5.2.17 Exit tray
6. Remove the DC power supply. G.5.4.3 DC power supply (DCPU)
7. Remove the transfer belt unit. F.7.4.3 Replacing the transfer belt unit
8. Remove the toner cartridge/Y,M,C,K. F.7.3.1 Replacing the toner cartridge
9. Remove the waste toner box. F.7.6.1 Replacing the waste toner box
10. Remove the drum unit/Y,M,C,K. F.7.1.1 Replacing the drum unit
11. Remove six screws [1], and remove the DC power supply protective shield [2].
12. Disconnect the connector [1]
13. Remove two screws [2], and remove the power supply cooling fan assy [3].
14. Disconnect the connector [1], and remove the harness from the harness guide.
15. Remove two tabs [1], and remove the power supply cooling fan [2].
16. Remove the developing unit. F.7.2.1 Replacing the developing unit 12. Remove the sub hopper unit. G.5.3.4 Sub hopper unit

## [2]

[1]
[1]

[1]

[1]
[2]

19. To reinstall, reverse the order of removal.

### 5.7.3 Machine rear side cooling fan (FM3)

## 1. Remove the lower rear cover.

G.5.2.20 Lower rear cover
2. Open the PWB box.
G.5.3.10 How to open the PWB box
13. Remove the screw [1], and remove the harness guide [2].
14. Remove the rail [1].
15. Remove the screw [1], and remove the waste toner pipe [2].
16. Unclip the connector [1] and three connector tabs [2], and remove the transfer belt cleaner cooling fan assy.
17. Remove the harness from harness guide [1].
18. Remove two screws [2], and remove the transfer belt cleaner cooling fan [3].
[2]

[1]
[1]

[2]
5. To reinstall, reverse the order of removal.

### 5.7.4 Toner cartridge cooling fan (FM4)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the scanner rear cover.
G.5.2.1 Scanner rear cover
3. Remove the upper rear cover.
G.5.2.22 Upper rear cover
[3]

[1]
[2]
4. To reinstall, reverse the order of removal.

### 5.7.5 Paper cooling fan (FM8)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the scanner rear cover. G.5.2.1 Scanner rear cover
3. Remove the upper rear cover. G.5.2.22 Upper rear cover
[1]

[2]
4. Remove the harness from the wire saddle [1], and disconnect the connector [2].
5. Remove two screws [1], and remove the rear side cooling fan [2].
6. Remove the screw [1]. Disconnect the connector [2], and remove the toner cartridge cooling fan [3].
7. Remove the harness from the wire saddle [1], and disconnect the connector [2].

8. To reinstall, reverse the order of removal.

### 5.8 Disassembly/reassembly procedure (etc.)

### 5.8.1 Bypass pick-up solenoid (SD1)

1. Remove the manual bypass tray unit.
G.5.3.6 Manual bypass tray unit
[2]

[1]
2. Remove four screws [1], and remove the paper cooling fan assy [2].
3. Remove the paper cooling fan [1].
4. Remove the E-ring [1], and remove the actuator [2].
5. Remove the harness from two wire saddles [1] and the edge cover [2]. 4. Remove the harness from two harness guides [3].

[^24][2]

[1]
[1]

[2]

[2]

## [1] [2]

12. To reinstall, reverse the order of removal.

### 5.8.2 IDC sensor shutter solenoid (SD2)

1. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box
2. Remove the transfer belt unit.
F.7.4.3 Replacing the transfer belt unit
3. Remove the front door.
G.5.2.13 Front door
4. Remove the front lower cover. G.5.2.14 Front lower cover
5. Disconnect the connector [1], and remove the harness from the wire saddle [2].
6. Remove the screw [1], and remove the metal plate [2] as clearing the harness.
7. Remove two screws [1], and remove the solenoid cover [2] and the earth plate [3].
8. Remove the screw [1], and remove the cover [2].
9. Disconnect the connector [3], and remove the bypass pick-up solenoid assy [4].
10. Remove the screw [1], and remove the bypass pick-up solenoid [2].
11. Remove the front cover.
G.5.2.15 Front cover
12. Remove the transport unit. G.5.3.12 Transport unit

13. Remove the harness from two wire saddles [1], and disconnect the connector [2].
14. Remove the screw [1], and remove the IDC sensor shutter solenoid [2].

[1]
15. To reinstall, reverse the order of removal.

### 5.8.3 Gate switch solenoid (SD3)

1. Remove the fusing unit.
F.7.9.1 Replacing the fusing unit
2. Remove the control panel left cover/1.
G.5.2.6 Control panel left cover/1
3. Remove the control panel right cover. G.5.2.8 Control panel right cover
4. Remove the control panel front cover. G.5.2.10 Control panel front cover
5. Remove the scanner right cover. G.5.2.2 Scanner right cover
6. Remove the upper right cover.
G.5.2.19 Upper right cover
7. Open the right door and the regist unit.

8. Remove two screws [1] and the tab [2], and remove the cover [3].
9. Remove the screw [1], and remove the cover [2].

[1]

## [1]

[3]
[2]
16. To reinstall, reverse the order of removal.

### 5.8.4 Developing solenoid (SD4)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. How to open the PWB box G.5.3.10 How to open the PWB box
3. Remove the developing motor. G.5.5.14 Developing motor (M21)
4. Remove four screws [2] of the gate switch unit [1].
5. Disconnect the connector [1].
6. Remove the harness from the wire saddle [2] and the edge cover [3].
7. Remove the gate switch unit [2] as clearing two belts [1].
8. Remove the screw [1].
9. Remove the gate switch solenoid [3] as clearing the actuator [2].

10. To reinstall, reverse the order of removal.

### 5.8.5 FAX speaker (SP1)

1. Remove the control panel left cover/1. G.5.2.6 Control panel left cover/1
2. Remove the control panel right cover G.5.2.8 Control panel right cover
3. Remove the control panel upper cover. G.5.2.9 Control panel upper cover
4. Remove the control panel front cover. G.5.2.10 Control panel front cover
5. Remove the control panel left cover/2. G.5.2.7 Control panel left cover/2

## [2]

[1]

## [2]

4. Disconnect the connector [1], and remove the harness from the edge cover [2] and the wire saddle [3].
5. Remove the screw [4], and remove the developing solenoid [5].
6. Unhook the claw [1], and remove the connector cover [2].
7. Disconnect the connector [1]
8. Remove two cable ties [1] from the control panel.
9. Remove the cable from the cable guide [2].

NOTE

- At installation of the control panel unit, insert the cable tie [1] to the hole [3] shown in the illustration.

[2]

[1]

[2] [3] [1] [2]
[1]

[2]
[1]

[2]

17. To reinstall, reverse the order of removal.
18. Remove the harness from the wire saddle [1].
19. Remove two screws [2], and remove the metal plate [3]. NOTE

- When installing the control panel, install the metal panel shaft [4] into the hole [5] in the figure.

12. Remove three screws [1], and remove the control panel unit [2].
13. Remove the cable from two wire saddles [1].
14. Remove four screws [2], and remove the FAX speaker assy [3].
15. Remove the harness from the wire saddle [1], and disconnect the connector [2].
16. Remove two screws [1], and remove the FAX speaker [2].

### 5.8.6 Bypass CD paper size VR (VR1)

1. Remove the manual bypass tray unit. G.5.3.6 Manual bypass tray unit

## [2]

[1]

[2]

[1]
[2]

[1]
[1]

[2]
2. Remove the E-ring [1], and remove the actuator [2].
3. Remove the harness from two wire saddles [1] and the edge cover [2].
4. Remove the harness from two harness guides [3].
6. Disconnect the connector [1], and remove the harness from the harness guide [2].
7. Remove the screw [1], and remove the metal plate [2] together with the harness.

[2]
[1]

[1]

8. Remove two screws [1], and remove the solenoid cover [2] and the earth plate [3].
9. Remove three screws [1].
10. Remove the screw [1], and remove the hinge [2].
11. Remove two screws [1].
12. Remove the harness from three wire saddles [1] and three edge covers [2], and disconnect the connector [3].
[2]

14. Disconnect the connector [1].

[1]

[1]

17. To reinstall, reverse the order of removal.

### 5.8.7 UFP filter/ Deodorant filter

(1) UFP filter

## NOTE

- The UFP filter is standard equipment only on models destined for Europe.

[1]

[2]

2. Remove two tabs [1], and remove the filter cover [2].
3. Remove the UFP filter [1].
4. To reinstall, reverse the order of removal.

## (2) Deodorant filter

## NOTE

- The deodorant filter is standard equipment only on models destined for China.

[1]

[2]

2. Remove two tabs [1], and remove the filter cover [2].
3. Remove the deodorant filter [1].

4. To reinstall, reverse the order of removal.
(3) When both the UFP filter and deodorant filter are installed.

## NOTE

- The UFP filter and odor filter can be used combined. In this situation, install by the following procedure.

1. Remove four tabs [1], and remove the ventilation cover [2]
2. Remove two tabs [1], and remove the filter cover [2].
3. Install the UFP filter [1].
4. Install the deodorant filter [1].
5. Peel off two seals [2] from the filter cover [1].

## [1]

7. Install the exhaust cover.
6. Install the filter cover [1].

NOTE

- Install the filter cover [1] while hooking the slots where the seals have been peeled off onto the protrusions [2] on the main body.

| 11 | UFP exhaust fan2 (FM18) | G.6.7.11 UFP exhaust fan2 (FM18) |

### 6.1.7 etc.

| No. | Part name | Ref. page |
| :--- | :--- | :--- |
| 1 | Bypass pick-up solenoid (SD1) | G.6.8.1 Bypass pick-up solenoid (SD1) |
| 2 | IDC sensor shutter solenoid (SD2) | G.6.8.2 IDC sensor shutter solenoid (SD2) |
| 3 | Gate switch solenoid (SD3) | G.6.8.3 Gate switch solenoid (SD3) |
| 4 | Developing solenoid (SD4) | G.6.8.4 Developing solenoid (SD4) |
| 5 | Soaking roller pressure solenoid (SD5) (bizhub C658/C558) | G.6.8.5 Soaking roller pressure solenoid (SD5) (bizhub <br> C658/C558) |
| 6 | FAX speaker (SP1) | G.6.8.6 FAX speaker (SP1) |
| 7 | Bypass CD paper size VR (VR1) | G.6.8.7 Bypass CD paper size VR (VR1) |

### 6.2 Disassembly/reassembly procedure (Exterior parts)

### 6.2.1 Scanner rear cover

1. Remove the scanner left cover. G.6.2.4 Scanner left cover
[4]

2. Remove the screw [1], and remove the clamp [2].
3. Remove two screws [3], and remove the scanner rear cover [4].
4. To reinstall, reverse the order of removal.

### 6.2.2 Scanner right cover

2. To reinstall, reverse the order of removal.

### 6.2.3 Scanner front cover

1. Remove the scanner left cover. G.6.2.4 Scanner left cover
2. Remove the control panel left cover. G.6.2.6 Control panel left cover
3. Remove the control panel right cover. G.6.2.7 Control panel right cover
4. Remove the control panel upper cover. G.6.2.8 Control panel upper cover
[1]

[1]
[2]
5. To reinstall, reverse the order of removal.

### 6.2.4 Scanner left cover

[2]
2. To reinstall, reverse the order of removal.

### 6.2.5 Scanner upper rear cover

1. Remove the dual scan document feeder. G.7.2.6 Dual scan document feeder
2. Remove the scanner left cover. G.6.2.4 Scanner left cover
3. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
4. Remove three screws [1], and remove the scanner right cover [2].
5. Remove three screws [1], and remove the scanner front cover [2].
6. Remove three screws [1], and remove the scanner left cover [2].

7. To reinstall, reverse the order of removal.

### 6.2.6 Control panel left cover

[2]
2. To reinstall, reverse the order of removal.

### 6.2.7 Control panel right cover

1. Open the right door.

2. To reinstall, reverse the order of removal.

### 6.2.8 Control panel upper cover

1. Remove the control panel left cover. G.6.2.6 Control panel left cover
2. Remove the control panel right cover. G.6.2.7 Control panel right cover

## [1]

[2]
4. To reinstall, reverse the order of removal.

### 6.2.9 Control panel front cover

1. Remove the control panel left cover. G.6.2.6 Control panel left cover
2. Remove the control panel right cover. G.6.2.7 Control panel right cover
3. Remove four screws [1], and remove the scanner upper rear cover [2].
4. Remove two screws [1], and remove the control panel left cover [2].
5. Remove two screws [1], and remove the control panel right cover [2].
6. Remove the screw [1], and remove the control panel upper cover [2].
7. Remove the screw [1].

[1]

[2] [1]

[3]

[2]
8. To reinstall, reverse the order of removal.

### 6.2.10 Control panel unit

1. Remove the control panel left cover. G.6.2.6 Control panel left cover
2. Remove the control panel right cover. G.6.2.7 Control panel right cover
3. Remove the control panel upper cover. G.6.2.8 Control panel upper cover
4. Remove the control panel front cover. G.6.2.9 Control panel front cover
5. Remove four screws [1], and release two tabs [2]
6. Remove the harness from the edge cover [1].
7. Disconnect the connector [2], and remove the control panel front cover assy [3].
8. Remove three screws [1], and remove the control panel front cover [2].

9. Release the tab [1], and remove the control panel connector cover [2].
[1]

[2]

10. Remove the tie band [1] from the control panel.
11. Remove the cable from the cable guide [2]. NOTE

- At installation of the control panel unit, insert the cable tie [1] to the hole [3] shown in the illustration.

9. Remove two screws [1].
10. Remove the screw [1], and remove the operation panel unit [2].

NOTE

- When installing the control panel, install the metal panel shaft [3] into the hole [4] in the figure.

12. Tilt down the hinge [1], and remove two screws [2].
13. Remove the screw [3], and remove the hinge [1].
14. To reinstall, reverse the order of removal.
15. Carry out the touch panel calibration.
G.6.2.10 (1) Touch panel calibration

## (1) Touch panel calibration

- After replacing the control panel unit, you must perform the touch panel calibration. Perform one of the calibration procedures described below.
(a) Panel Calibration by using USB memory

1. Connect the USB memory containing the MFP firmware data to the service port.

For information on how to store the firmware data into a USB memory, refer to "USB memory".
2. While pressing the 'Reset' key, turn the main power switch ON.
3. Once the calibration screen appears, press the Start key and perform the calibration. Wait for approximately 10 seconds.
4. Confirm that the completion message. Touch [Close].
5. Turn OFF the main power switch, and remove the USB memory.

## NOTE

- Once the panel calibration has been completed, panel screen transit to the firmware writing mode and start to update automatically after 30 seconds.
(b) Panel Calibration by manual operation
. Press [Menu] -> [Counter] -> [Display Keypad].
. Press Stop -> Clear -> 1 -> 1 -> 6 -> 6 -> Start key, then calibration starts.

3. After 30 seconds, turn OFF the main power switch.

### 6.2.11 Original glass

1. Remove the scanner right cover.
G.6.2.2 Scanner right cover

[1]
2. Remove two screws [1], and remove two original glass fixing brackets [2].
[1]

3. Remove the original glass [1].
4. To reinstall, reverse the order of removal.
5. Perform the adjustment from [Service Mode] -> [Machine] -> [Scan Area] -> [Scanner Image Side Edge]
6. Perform the adjustment from [Service Mode] -> [Machine] -> [Scan Area] -> [Image Position: Leading Edge].

### 6.2.12 Upper front door

## 1. Open the upper front door.

> 2. Remove two C-clips [1].
3. Partially close the upper front door [1] and the slide it to the right to remove.
4. To reinstall, reverse the order of removal.

### 6.2.13 Lower front door

## 1. Open the lower front door.

2. Remove the screw [1], and remove the stopper [2].
3. Remove the C-clip [3].
4. Slide the lower front door [4] to the right to remove.
[2]

[1]
3. To reinstall, reverse the order of removal.

### 6.2.15 Front cover

1. Remove the upper front door. G.6.2.12 Upper front door
2. Remove the lower front door. G.6.2.13 Lower front door
3. Remove the waste toner box. F.8.7.1 Replacing the waste toner box
4. Remove the front lower cover. G.6.2.14 Front lower cover

5. To reinstall, reverse the order of removal.

### 6.2.16 Left cover

1. Open the upper front door.
2. Open the lower front door.

[2]
3. To reinstall, reverse the order of removal.

### 6.2.17 Exit cover

1. Open the upper front door.
2. Open the lower front door.
3. Remove the left cover.
G.6.2.16 Left cover
[1]

4. Remove three screws [1], and remove the front lower cover [2].
5. Remove 11 screws [1], and remove the front cover [2].
6. Remove three screws [1], and remove the left cover [2].
7. Remove the exit cover [1].
8. To reinstall, reverse the order of removal.

### 6.2.18 Output rear cover

## 1. Remove the left cover.

G.6.2.16 Left cover
2. Remove the exit cover.
G.6.2.17 Exit cover

[2]

4. Remove two screws [1], and slide the output rear cover [2] to the left to remove.
2. Disconnect two connectors [1], and remove the harness from the harness guide.
3. Remove the screw [1], and remove the connector cover [2].

5. To reinstall, reverse the order of removal.

### 6.2.20 Upper right cover

1. Remove the scanner right cover.
G.6.2.2 Scanner right cover
[1]

[2]
2. To reinstall, reverse the order of removal.

### 6.2.21 Lower rear cover

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter

## [2]

[1]
4. Remove seven screws [1], and remove the right rear cover [2] as clearing the harness.
2. Remove two screws [1], and remove the upper right cover [2].
3. Remove three caps [1].
4. Remove the screw [1], and remove the cover [2].

6. To reinstall, reverse the order of removal.

### 6.2.22 DF cable cover

2. To reinstall, reverse the order of removal.

### 6.2.23 Duct cover/1

[2]

[1]
2. To reinstall, reverse the order of removal.

### 6.2.24 Duct cover/2, filter assy

[1]

[1]
3. To reinstall, reverse the order of removal.
5. Remove five screws [1], and remove the lower rear cover [2].

1. Remove the screw [1], and remove the DF cable cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

1. Remove two screws [1], and remove the duct cover [2].
2. Remove two screws [1], and remove the duct cover [2].
3. Remove four screws [1], and remove the filter assy [2].

### 6.2.25 Upper rear cover

1. Remove the duct cover
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover

## [3]

[2] [1]
[1]

7. Remove the cable from two wire saddles [1], and disconnect the connector [2].
8. Disconnect the cable [3], then remove the cable from the cable guide.
9. Remove the cable tie [1], and disconnect three connectors [2].
10. Remove two screws [1] and two tabs [2], and remove the upper rear cover [3].
4. Remove two screws [1], and remove the protective shield [2]. NOTE

- When installing the protective shield, first engage the lower left tab [3].

5. To reinstall, reverse the order of removal.

### 6.2.27 Tray 1

1. Slide out the tray 1 and unload paper from it.
2. Unlock the stopper [1].

[1]
3. Hold up the tray 1 [1] to remove it.

4. To reinstall, reverse the order of removal.

### 6.2.28 Tray 2

1. Slide out the tray 2 and unload paper from it.

> 2. Unlock the stopper [1].

3. Hold up the tray 2 [1] to remove it.

4. To reinstall, reverse the order of removal.

### 6.3 Disassembly/reassembly procedure (Units)

### 6.3.1 LED exposure unit

1. Remove the scanner right cover.
G.6.2.2 Scanner right cover
2. Remove the original glass.
G.6.2.11 Original glass

NOTE

- When replacing the LED exposure unit with a brand-new one, peel the protective film from the unit after attaching it.

### 6.3.2 Paper feed unit

1. Slide out the tray 1 and tray 2.
2. Open the right door.

3. Remove two screws [1] and the tab [2], and remove the connector cover [3].
4. Disconnect five connectors [1].
5. Remove five screws [1], and remove the paper feed unit [2].
[2]

[1] [1]
6. To reinstall, reverse the order of removal.

## $\triangle$ CAUTION

- Do not supply power with the write unit (PH unit) shifted from the specified mounting position.

The laser light can enter your eye, leading to a risk of loss of eyesight.

## $\triangle$ CAUTION

- Do not disassemble or adjust the write unit (PH unit) incorporating a laser.

The laser light can enter your eye, leading to a risk of loss of eyesight.
(1) Removal procedure

1. Remove the waste toner box.
F.8.7.1 Replacing the waste toner box
2. Remove the front lower cover.
G.6.2.14 Front lower cover
3. Remove the left cover.
G.6.2.16 Left cover
4. Remove the exit cover.
G.6.2.17 Exit cover
5. Remove the DC power supply. G.6.4.5 DC power supply (DCPU)

[2]

[3] [5] [1]
6. Remove the harness from two wire saddles [1].
7. Disconnect three connectors [2] on the front side board.
8. Disconnect two flat cables [1].
9. Remove the flat cable from the flat cable clamp [2].
10. Remove the harness from the wire saddle [3].
11. Remove the screw [4], and remove the board assy [5].
[1]

[1]

[1] [2] [1]
12. Disconnect two connectors [1].
13. Remove seven screws [1], and remove the metal plate [2].
14. Remove two screws [1], and remove the set pin [2] for the PH unit.
15. Remove the PH unit [1].
[1]
[2]

[1]

16. To reinstall, reverse the order of removal.
17. Perform the [Print Head Skew Reset] from [Service Mode] -> [Machine] -> [Print Head Skew Adj.].
18. Perform the [Leading Edge Adjustment] from [Service Mode] -> [Machine] -> [Printer Area].
19. Perform the [Printer Image Centering Side 1] from [Service Mode] -> [Machine] -> [Printer Area].

### 6.3.4 Sub hopper unit

1. Remove the upper front door.
G.6.2.12 Upper front door
2. Remove the lower front door.
G.6.2.13 Lower front door
3. Remove the waste toner box.
F.8.7.1 Replacing the waste toner box
4. Remove the front lower cover.
G.6.2.14 Front lower cover
5. Remove the front cover. G.6.2.15 Front cover
6. Remove the toner cartridge. F.8.4.1 Replacing the toner cartridge
7. Remove the drum unit. F.8.2.1 Replacing the drum unit
8. Remove the developing unit. F.8.3.1 Replacing the developing unit
9. Remove the exit cover.
G.6.2.17 Exit cover

10. To reinstall, reverse the order of removal.

### 6.3.5 Right door unit

1. Remove the rear right cover.
G.6.2.19 Rear right cover
2. Open the right door.
3. Open the registration unit.

## [1]

[2]

10. Remove the harness from the wire saddle [1], and disconnect the connector [2].
11. Disconnect two connectors [3].
12. Remove five screws [1], and remove the sub hopper unit [2].
4. Remove the screw [1], and remove the connector cover/1 [2].
5. Disconnect two connectors [1].
6. Remove the screw [2], and remove the ground terminal [3].
7. Remove the screw [1], and remove the connector cover/2 [2].

10. Close the right door.

[2]
[1]

8. Disconnect four connectors [1], and remove the harness from the wire saddle [2].
9. Remove the screw [1], and remove the ground terminal [2].
11. Draw the gauge line to the hinge mounting part [1] along the cutout of the hinge on the frame of the main body.
12. Remove three screws [1], and remove the hinge (upper section) [2].
13. Open the right door and then open the registration unit.
14. Hold up the right door unit [1] to remove it.
15. To reinstall, reverse the order of removal.

## NOTE

- When installing the right door unit, align it with the guide lines drawn on the scales indicated on the machine frame. Open and close the right door to check for any interference and correct if necessary.

### 6.3.6 Manual bypass tray unit

1. Open the right door.
2. Open the registration unit.
[1]
[2]
3. Remove the screw [1], and remove the shaft holder/1 [2].

[1]
4. Remove 10 screws [1], and remove the vertical transport roll assy [2].
5. Remove three screws [1], and remove the shaft holder/2 [2].
6. Remove two screws [1], and remove the right door lever assy [2].
7. Remove the screw [1], and remove the connector cover [2].

8. To reinstall, reverse the order of removal.

### 6.3.7 Regist unit

1. Remove the right door unit. G.6.3.5 Right door unit
2. Disconnect four connectors [1], and remove the harness from the wire saddle [2].
3. Remove the screw [1], and remove the ground terminal [2].
4. Remove 10 screws [2] of the manual bypass tray unit [1].
5. Remove the manual bypass tray unit [1].

## [2]

[1]

[1]

[2]
2. Disconnect the connector [1], and remove the harness from the wire saddle [2].
3. Draw the gauge line to the hinge mounting part [1] along the cutout of the hinge on the frame of the main body.
5. Hold up the regist unit [1] to remove it.

[1]
6. To reinstall, reverse the order of removal.

### 6.3.8 Hard disk (A)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover

4. To reinstall, reverse the order of removal
5. Logically format the system from [Service Mode] -> [State Confirmation] -> [Memory/Storage Adjustment] -> [Format]
6. Check the HDD operation from [Service Mode] -> [State Confirmation] -> [Memory/Storage Adjustment] -> [Storage R/W Check]

### 6.3.9 How to open the PWB box/1

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover
G.6.2.21 Lower rear cover
4. Remove the protective shield.
G.6.2.26 Protective shield
5. Disconnect all connectors from the PWB box/1 side panel.
6. Remove the screw [1], and remove the connector cover [2].
7. Remove six screws [1] from the PWB box/1 side panel.
8. Remove three screws [1] from the PWB box/1.

[4]

### 6.3.10 PWB box/2 (bizhub C658/C558)

1. Remove the duct cover
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover. G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)

[1]

[2]

[1]
9. Remove the cable from three wire saddles [1]
10. Disconnect two connectors [2].
11. Remove the screw [3], and open the PWB box /1 [4].
12. Remove seven screws [1], and remove the IH power supply protective shield [2].
13. Disconnect the connector [1], and remove the harness from the edge cover [2] and two wire saddles [3].
14. Disconnect the connector [4], and remove the harness from the edge cover [5].
15. Disconnect the connector [1], and remove the harness from two wire saddles [2].

16. To reinstall, reverse the order of removal.

### 6.3.11 Main drive unit

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover. G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
9. Remove the protective shield. G.6.2.26 Protective shield
10. Open the PWB box. G.6.3.9 How to open the PWB box/1
11. Remove the high voltage unit. G.6.4.11 High voltage unit (HV)
12. Remove the expansion control board. G.6.4.12 Expansion control board (EXCB)
13. Remove the registration motor. G.6.5.21 Registration motor (M24) (bizhub C658)
14. Remove the ADU transport motor 2. G.6.5.24 ADU transport motor2 (M26)
15. Remove the transport motor. G.6.5.1 Transport motor (M1)
16. Remove the PC motor. G.6.5.2 PC motor (M2)
17. Remove the developing motor. G.6.5.18 Developing motor (M21)
[2]

[1]
18. Disconnect the connector [1]
19. Remove four solderless terminals [2].
20. Remove the harness from the wire saddle [3].
21. Remove the harness from the harness guide [4] and edge cover [5].
22. Remove five screws [1], and remove two board boxes [2].
23. Remove the screw [1].
24. Remove the harness guide [2] as clearing the harness.

[1]

[2]
25. Remove the cable from five wire saddles [1].
26. Remove four screws [2], and remove the plate [3].
27. Remove the harness from two wire saddles [1].
28. Disconnect the connector [2].
29. Remove the harness from six wire saddles [1] and four edge covers [2].
30. Remove four screws [1].
31. Remove the reinforcing plate [2] as clearing the harness.
32. Remove two screws [1], and remove the bracket [2].

[2]
33. Open the right door.

[1]

[1]

34. To reinstall, reverse the order of removal.

### 6.3.12 Transport unit

1. Remove the transfer belt unit. F.8.5.3 Replacing the transfer belt unit
2. Remove the upper front door.
G.6.2.12 Upper front door
3. Remove the lower front door. G.6.2.13 Lower front door
4. Remove the waste toner box. F.8.7.1 Replacing the waste toner box
5. Remove the front lower cover G.6.2.14 Front lower cover
6. Remove the front cover G.6.2.15 Front cover

## [2]

30. Remove the harness from three harness guides [1].
31. Remove the harness from two wire saddles [2].
32. Remove four screws [3], and remove the harness from the harness guide. NOTE

- Make sure not to lose the spring [4].

33. Remove nine screws [1], and remove the main drive unit [2].
34. Remove the harness from four wire saddles [1].
35. Disconnect two connectors (CN8, CN11) [2] on the front side board.
36. Disconnect the connector [3].
37. Open the right door.

[2]

[1]

[3]
38. To reinstall, reverse the order of removal

### 6.3.13 IH coil (IHC) (bizhub C658/C558)

1. Remove the fusing unit.
F.8.10.1 Replacing the fusing unit (bizhub C658/C558)
2. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
3. Remove the toner filter. F.8.1.1 Replacing the toner filter
4. Remove the lower rear cover. G.6.2.21 Lower rear cover
5. Remove the scanner left cover.
G.6.2.4 Scanner left cover
6. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
7. Remove the DF cable cover. G.6.2.22 DF cable cover
8. Remove the upper rear cover G.6.2.25 Upper rear cover
9. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
10. Remove the left cover. G.6.2.16 Left cover
11. Remove the exit cover. G.6.2.17 Exit cover
12. Remove the output rear cover. G.6.2.18 Output rear cover
13. Remove the screw [1], and remove the stopper [2].
14. Remove the E-ring [1], and remove the gear [2].
15. Remove the screw [1], and remove the plate spring [2].
16. Remove three screws [3], and remove the transport unit [4]. NOTE

- When removing the transport unit [4], be careful not to damage or deform the guide sheet of the tray 1 paper feed unit.

22. To reinstall, reverse the order of removal.

### 6.3.14 Fusing drive unit (bizhub C658/C558)

1. Remove the rear right cover. G.6.2.19 Rear right cover
2. Remove the fusing unit. F.8.10.1 Replacing the fusing unit (bizhub C658/C558)
3. Remove the duct cover
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
4. Remove the toner filter.
F.8.1.1 Replacing the toner filter
5. Remove the lower rear cover.
G.6.2.21 Lower rear cover
6. Remove the scanner left cover. G.6.2.4 Scanner left cover
7. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
8. Remove the DF cable cover. G.6.2.22 DF cable cover
9. Remove the upper rear cover. G.6.2.25 Upper rear cover
10. Remove the paper cooling fan assy. G.5.7.5 Paper cooling fan (FM8)
11. Remove seven screws [1], and remove the IH power supply protective shield [2].
12. Remove four solderless terminals [1].
13. Remove the harness from the wire saddle [2]
14. Remove the harness from the harness guide [3] and edge cover [4].
15. Remove the harness from the harness guide [5].
16. Remove the harness from the harness guide [1].
17. Remove two screws [1]
18. Remove the bracket in accordance with the procedure in the figure of the IH coil [2].
19. Remove the IH coil [2] while pulling the harness loose.
20. Remove the protective shield.
G.6.2.26 Protective shield
21. Open the PWB box/1. G.6.3.9 How to open the PWB box/1
22. Remove the left cover G.6.2.16 Left cover
23. Remove the exit cover. G.6.2.17 Exit cover
24. Remove the output rear cover. G.6.2.18 Output rear cover
25. Remove the expansion control board. G.6.4.12 Expansion control board (EXCB)
26. Remove the fusing motor. G.6.5.3 Fusing motor (M3)
27. Remove the fusing pressure motor. G.6.5.15 Fusing pressure motor (M11)

## [1]

[1]

[2]
39. To reinstall, reverse the order of removal.

### 6.3.15 Fusing drive unit (bizhub C458)

1. Remove the rear right cover.
G.6.2.19 Rear right cover
2. Remove the fusing unit.
F.8.10.2 Replacing the fusing unit (bizhub C458)
3. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
4. Remove the toner filter.
5. Disconnect two connectors [1].
6. Remove the screw [2].
7. Remove two E-rings [1], and remove two gears [2].
8. Remove the E-ring [1], and remove the flange [2].
9. Remove the belt [3] from the gear.
10. Remove the screw [4].
11. Remove the harness from the harness guide [1].
12. Remove five screws [1], and remove the fusing drive unit [2].

## F.8.1.1 Replacing the toner filter

5. Remove the lower rear cover.
G.6.2.21 Lower rear cover
6. Remove the scanner left cover. G.6.2.4 Scanner left cover
7. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
8. Remove the DF cable cover. G.6.2.22 DF cable cover
9. Remove the upper rear cover. G.6.2.25 Upper rear cover
10. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
11. Remove the toner cartridge cooling fan assy. G.6.7.5 Toner cartridge cooling fan (FM4) (bizhub C458)
12. Remove the protective shield.
G.6.2.26 Protective shield
13. Open the PWB box/1.
G.6.3.9 How to open the PWB box/1
14. Remove the expansion control board. G.6.4.12 Expansion control board (EXCB)
15. Remove the fusing motor. G.6.5.3 Fusing motor (M3)
16. Remove the fusing pressure motor.
G.6.5.15 Fusing pressure motor (M11)
[1]

17. Remove the harness from the edge cover [1], and disconnect two connectors [2].
18. Remove four screws [1], the ground terminal [2], and remove the plate [3].
19. Remove four screws [1], and remove the plate [2].

20. Remove the harness from two wire saddles [1].
21. Disconnect four connectors [2].
22. Remove the harness from five wire saddles [1] and three edge covers [2].
23. Remove four screws [1].
24. Remove the reinforcing plate [2] as clearing the harness.
25. Remove the screw [1], and remove two tabs [2].
26. Remove the harness guide [1] while avoiding the harness.

5. Remove the scanner left cover.
G.6.2.4 Scanner left cover
6. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
7. Remove the DF cable cover. G.6.2.22 DF cable cover
8. Remove the upper rear cover G.6.2.25 Upper rear cover
9. Remove the paper cooling fan assy. G.5.7.5 Paper cooling fan (FM8)
10. Remove the board box/2.
G.6.3.10 PWB box/2 (bizhub C658/C558)
11. Remove the left cover.
G.6.2.16 Left cover
12. Remove the exit cover. G.6.2.17 Exit cover
13. Remove the output rear cover. G.6.2.18 Output rear cover

## [2]

[3]

18. To reinstall, reverse the order of removal.

### 6.3.17 Hopper drive unit (bizhub C458)

1. Slide out the toner bottle.
2. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
3. Remove the toner filter.
F.8.1.1 Replacing the toner filter
4. Remove the lower rear cover. G.6.2.21 Lower rear cover
5. Remove the scanner left cover. G.6.2.4 Scanner left cover
6. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
7. Remove the DF cable cover. G.6.2.22 DF cable cover
8. Remove the screw [1], and remove the harness guide [3] from the hopper drive unit [2].
9. Disconnect six connectors [1], and remove the harness from all harness guides in the hopper drive unit [2].
10. Remove the harness from the wire saddle [3].
11. Remove three screws [1], and remove the hopper drive unit [2].
12. Remove the upper rear cover.
G.6.2.25 Upper rear cover
13. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
14. Remove the toner cartridge cooling fan.
G.6.7.5 Toner cartridge cooling fan (FM4) (bizhub C458)
15. Remove the left cover.
G.6.2.16 Left cover
16. Remove the exit cover.
G.6.2.17 Exit cover
17. Remove the output rear cover.
G.6.2.18 Output rear cover
18. Remove the expansion control board.
G.6.4.12 Expansion control board (EXCB)
[1]

19. Remove the screw [1], and remove the harness guide [3] from the hopper drive unit [2].
20. Disconnect six connectors [1], and remove the harness from all harness guides of hopper drive unit [2].
21. Remove the harness from the wire saddle [3].
22. Remove three screws [3], and remove the hopper drive unit [2].

23. To reinstall, reverse the order of removal.

### 6.3.18 ADU transport unit

1. Open the right door.

## [1]

[2]

## [1]

[3]
[2]
3. Disconnect two connectors [1].
4. Remove the screw [2], and remove the ground terminal [3].
5. Remove six screws [1], and remove the ADU transport unit [2].

### 6.3.19 Paper exit unit

1. Remove the fusing unit.
F.8.10.1 Replacing the fusing unit (bizhub C658/C558)
F.8.10.2 Replacing the fusing unit (bizhub C458)
2. Remove the control panel left cover.
G.6.2.6 Control panel left cover
3. Remove the control panel right cover. G.6.2.7 Control panel right cover
4. Remove the control panel front cover. G.6.2.9 Control panel front cover
5. Remove the upper right cover.
G.6.2.20 Upper right cover

### 6.4 Disassembly/reassembly procedure (Boards)

### 6.4.1 CCD board (CCDB)

(1) Removal procedure

1. Remove the scanner right cover.
G.6.2.2 Scanner right cover
2. Remove the original glass.
G.6.2.11 Original glass

3. Remove five screws [1], and remove the CCD board protective shield [2].

4. Disconnect three connectors [1].
5. Remove two screws [1], and remove two retainer plates [2].
6. Remove the CCD board [3].
7. Check the mark [1] on lens of the CCD board. NOTE

- The mark is be "-", " 0 ", or " + ".

2. Install the CCD board [1] to the main body.

3. Set the scale [2] of the CCD board to the same position as the mark checked on step 1, and secure it with two retainer plates [3] and two screws [4].
4. For the rest of the mounting procedure, reverse the order of removal.
5. Reinstall the original glass.
6. Turn ON the main power switch.
7. Make adjustments from [Service Mode] -> [System 2] -> [CCD Calibration].
8. Make adjustments from [Service Mode] -> [System 2] -> [Line Mag Setting].
9. Make adjustments from [Service Mode] -> [Machine] -> [Printer Area] -> [Paper Feed Direction Adj.].
10. Make adjustments from [Service Mode] -> [Machine] -> [Scan Area] -> [Main Scan Zoom Adj.]. If the specifications do not match, loosen the CCD board mounting screws and move the CCD board in the sub scan direction as necessary.
NOTE

- Hold the CCD board by hand when moving it. NEVER use a screwdriver or similar tool to tap to move it, as a varied distance between the CCD sensor and lens results.

11. Make adjustments from [Service Mode] -> [Machine] -> [Scan Area] -> [Scanner Image Side Edge].

### 6.4.2 Scanner drive board (SCDB)

1. Remove the dual scan document feeder
G.7.2.6 Dual scan document feeder
2. Remove the scanner left cover.

## G.6.2.4 Scanner left cover

3. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
4. Remove the scanner upper rear cover. G.6.2.5 Scanner upper rear cover

5. Disconnect all connectors on the scanner drive board.
6. Remove three screws [1], and remove the scanner drive board [2].
7. Remove two screws [1], and remove the machine condition monitor board [2].
8. Disconnect all connectors on the front side board.

9. To reinstall, reverse the order of removal.

### 6.4.5 DC power supply (DCPU)

1. Remove the left cover.
G.6.2.16 Left cover
2. Remove the exit cover.
G.6.2.17 Exit cover

[1]

[1]
3. Disconnect all connectors on the DC power supply.

4. To reinstall, reverse the order of removal.

### 6.4.7 eMMC board (eMMC)

NOTE

- Never use the combination of the used eMMC board removed from another machine and the original MFP board. This combination causes corruption of stored data.
Note that the combination of the original eMMC board and the used MFP board removed from another machine also causes the same problem.

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield
[1]

5. Release the lock of the eMMC board [1] NOTE

- Be careful not to drop the eMMC board.

6. Remove the eMMC board [1].

7. To reinstall, reverse the order of removal.

### 6.4.8 MFP board (MFPB)

## NOTE

- Never use the combination of the used MFP board removed from another machine and the original eMMC board or EEPROM. This combination causes corruption of stored data. Note that the combination of the original MFP board and the used eMMC board or EEPROM removed from another machine also causes the same problem.
- Do not replace the MFP board and the eMMC board or EEPROM with new ones at the same time.

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover

4. Remove the protective shield.
G.6.2.26 Protective shield
5. Remove the hard disk
G.6.3.8 Hard disk (A)
6. Remove the eMMC board.
G.6.4.7 eMMC board (eMMC)
7. Remove the image processing board.
G.6.4.13 Dual scan image processing board (DSIPB)

[1]
8. Remove all connectors and flat cables on the MFP board.

[2]

[1]
9. Remove the harness from two wire saddles [1].
10. Remove five screws [1], and remove the aluminum sheet [2].
11. Remove three screws [1], and remove the plate [2].
[1]

[2]

[1]

[2]

12. Remove 12 screws [1], and remove the MFP board [2].
13. To reinstall, reverse the order of removal.

## 15. NOTE

- After replacing the MFP board (MFPB), transfer EEPROM/1 and EEPROM/2.
- Mark the EEPROMs to before replacing. Mark the EEPROMs to distinguish old from new, and mark EEPROM/1 and EEPROM/2 to distinguish from each other.
- Marks should be helpful to making easy distinction regardless of the style of them.
- When replacing EEPROM/1 [1], EEPROM/2 [2], replace them one at a time to prevent a mix-up in the device positions.
- When mounting EEPROM , align the notches (indicated by " $A$ " in the illustration).

16. Enter the model information after replacing the MFP board. G.6.4.9 Entering the machine type information
17. Turn OFF the main power switch.
18. Wait ten seconds and then turn on the main power switch.
19. Install the firmware. J.3.2 Procedure
20. Turn OFF the main power switch, and remove the USB memory.
21. Wait 10 seconds, turn ON the main power switch and wait 2 minutes until boot up the machine completely.
22. Wait until [Recover Data] [1] appears. (MFP will reboot maximum 2 times by itself, it may take 5 minutes.)

23. Touch [Recover Data] and [Yes].
24. Turn OFF the main power switch, wait 10 seconds, then turn ON the main power switch, after "Turn the main switch OFF and ON." message is appeared.

### 6.4.9 Entering the machine type information

- When MFP board is replaced, it is necessary to enter the machine type information.
- Refer to the following procedures to enter the machine type information.

## (1) Procedure

1. Insert the USB memory to the USB port.
2. Turn the main power switch ON while pressing the Stop key.
3. Touch [Machine Type Select].

4. Enter [Machine] and [Type] information according to the Table : Machine type information. Then touch [Fix].

5. Touch [OK], and turn OFF the main power switch.

Table : Machine type information

| First four digits of <br> the serial number | A79J | A79K | A79M |
| :--- | :--- | :--- | :--- |
| $[$ Machine $]$ | 9 | 9 | 9 |
| $[$ Type $]$ | 7 | 9 | 0 |

### 6.4.10 EEPROM/1, EEPROM/2

NOTE

- Never use the combination of the used EEPROM removed from another machine and the original MFP board. This combination causes corruption of stored data.
Note that the combination of the original EEPROM and the used MFP board removed from another machine also causes the same problem.
- Always replace the EEPROM/1 and EEPROM/2 as a set.

Replace them one at a time to prevent a mix-up between new and old and the device positions.

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove five screws [1], and remove the aluminum sheet [2].

5. Mark the EEPROM/1.

NOTE

- Mark the EEPROMs to distinguish old from new, and mark EEPROM/1 and EEPROM/2 to distinguish from each other.
- Marks should be helpful to making easy distinction regardless of the style of them.
[1]

6. Remove the EEPROM/1 [1].

7. Mark the EEPROM/2.

NOTE

- Mark the EEPROMs to distinguish old from new, and mark EEPROM/1 and EEPROM/2 to distinguish from each other.
- Marks should be helpful to making easy distinction regardless of the style of them.

8. Remove the EEPROM/2 [1].

[1]

9. To reinstall, reverse the order of removal.

NOTE

- When mounting EEPROM , align the notches (indicated by " $A$ " in the illustration).

## NOTE

Since the counter will be cleared when the EEPROM is replaced with a new one, replace the following parts with new ones.
When the transfer belt unit and the fusing unit have been replaced with new ones, perform [New Release] in the service mode. When the transfer roller has been replaced with a new one, perform [Counter clear].

- Developing unit/Y,M,C,K
- Drum unit/Y,M,C,K
- Toner cartridge/Y,M,C,K
- Transfer belt unit
- Fusing unit
- Transfer roller
- Feed roller, pick-up roller, separation roller (including options) NOTE
- When the new EEPROM is installed, the error message: "License management error occurred." is displayed. Conduct the i-Option recovery operation.

10. Open the lower front door and turn on the main power supply switch
11. Enter the Service Mode. Make individual adjustments shown in Table 1: Readjustment item in the order listed, using the machine maintenance list and the adjustment lists that were output at the time of main body installation and maintenance.
NOTE

- Ensure the front lower door is opened.

NOTE

- Conduct the readjustment of the above adjustment items before the starting the initial warm-up operation after replacing the EEPROMs.

12. Turn off the main power switch.
13. Turn on the main power switch and close the front door. Check to see that warm-up and image stabilization operations are completed normally.
14. Enter the Service Mode again. Make individual adjustments shown in Table 2: Readjustment item in the order listed, using the machine management list and the adjustment lists that were output at the time of main body installation and maintenance.
Table 1: Readjustment item

| Adjustment items | Service mode readjustment items |  |  | Ref. Page |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Machine | Color Registration Adjustment | Cyan | I.5.4.8 Color Registration Adjustment |

### 6.4.11 High voltage unit (HV)

1. Remove the duct cover. G.6.2.23 Duct cover/1 G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.

> F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Open the PWB box/1.
G.6.3.9 How to open the PWB box/1

[1]

[2]
8. To reinstall, reverse the order of removal.

### 6.4.12 Expansion control board (EXCB)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover.
G.6.2.22 DF cable cover
7. Remove the upper rear cover
G.6.2.25 Upper rear cover
[1]

8. To reinstall, reverse the order of removal.
6.4.13 Dual scan image processing board (DSIPB)
9. Remove the duct cover. G.6.2.23 Duct cover/1
10. Remove four screws [1] of the high voltage unit NOTE

- When installing the high voltage unit, tighten the screws in the order shown in the illustration.

7. Unhook the tab [1], and remove the high voltage unit [2]. NOTE

- When mounting the high voltage unit, the terminal contact point must be contacted without fail. The claw also must be firmly hooked.

8. Remove all connectors from the board.
9. Remove four screws [1], and remove the expansion control board [2].
G.6.2.24 Duct cover/2, filter assy
10. Remove the toner filter.
F.8.1.1 Replacing the toner filter
11. Remove the lower rear cover. G.6.2.21 Lower rear cover
12. Remove the protective shield. G.6.2.26 Protective shield
13. Remove the DSC board/2 (for back side).
G.8.27.4 DSC board/2 (for back side) (SC-508) (bizhub C658/C558/C458)

## [2] [1] <br> [2]

[3]
[2]
6. Disconnect the connector [1].
7. Remove four screws [2], and remove the dual scan image processing board [3].
8. To reinstall, reverse the order of removal.

### 6.4.14 IH magnetic erasing board (IHMEB) (bizhub C658/C558)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover.
G.6.2.22 DF cable cover
7. Remove the upper rear cover.
G.6.2.25 Upper rear cover

[1]
[1]

8. Remove seven screws [1], and remove the IH power supply protective shield [2].
9. Disconnect all solderless terminals and connector from the IH magnetic erasing board [1].

10. To reinstall, reverse the order of removal.

### 6.4.15 IH power supply unit (IHPU)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover G.6.2.25 Upper rear cover

[1]

8. To reinstall, reverse the order of removal.

### 6.4.16 NF board (NFB) (bizhub C658/C558)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove three board supports [1], and remove the IH magnetic erasing board [2].
3. Remove seven screws [1], and remove the IH power supply protective shield [2].
4. Disconnect three connectors [1].
5. Remove two solderless terminals [2]
6. Remove two solderless terminals [1]
7. Remove six screws [2], and remove the IH power supply [3].
8. Remove the toner filter. F.8.1.1 Replacing the toner filter
9. Remove the lower rear cover. G.6.2.21 Lower rear cover
10. Remove the scanner left cover. G.6.2.4 Scanner left cover
11. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
12. Remove the DF cable cover.
G.6.2.22 DF cable cover
13. Remove the upper rear cover.
G.6.2.25 Upper rear cover

14. To reinstall, reverse the order of removal.

### 6.4.17 Fusing power supply (FUPU) (bizhub C458)

1. Remove the duct cover
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover G.6.2.25 Upper rear cover

[1]
8. Remove seven screws [1], and remove the IH power supply protective shield [2].
9. Disconnect three connectors [1].
10. Remove the harness from the wire saddle [2].
11. Remove four screws [3], and remove the NF board [4].
12. Remove four screws [1], and remove the IH power supply protective shield [2].

### 6.4.18 Tray 1 FD paper size board (FDPSB/1), tray 2 FD paper size board (FDPSB/2)

NOTE

- The tray 1 FD paper size board and the tray 2 FD paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 1 FD paper size board.

1. Remove the tray 1.
G.6.2.27 Tray 1
2. Remove the tray 2.
G.6.2.28 Tray 2

3. Disconnect the connector [1]
4. Remove the screw [2] and three tabs [3], and remove the tray 1 FD paper size board assy [4].
5. Disconnect three connectors [1].
6. Remove four screws [2], and remove the fusing power supply [3].

7. To reinstall, reverse the order of removal.
[1]
[2]

[1]
8. To reinstall, reverse the order of removal.

### 6.4.19 Tray 1 CD paper size board (CDPSB/1), tray $2 C D$ paper size board (CDPSB/2)

NOTE

- The tray 1 CD paper size board and the tray $2 C D$ paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 1 CD paper size board.

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield.
G.6.2.26 Protective shield
5. Open the PWB box.
G.6.3.9 How to open the PWB box/1
6. Remove the high voltage unit. G.6.4.11 High voltage unit (HV)
7. Slide out the tray 1.

8. Remove screw [1] and spring [2].
9. Remove the connector [1], and remove the tray 1 CD paper size board assy [2].
10. Remove the screw [1], and remove the tray 1 CD paper size board [2].
11. To reinstall, reverse the order of removal.
6.4.20 Tray 1 empty indicator board (PEIB/1), tray 2 empty indicator board (PEIB/2)
12. Slide out the tray 1 and the tray 2 .

13. Remove two screws [1], and remove the tray right cover [2].
14. Unhook four tabs [1]. Disconnect two connectors [2], and remove the tray 1 empty indicator board [3] and the tray 2 empty indicator board [4].
15. To reinstall, reverse the order of removal.

### 6.5 Disassembly/reassembly procedure (Motors)

### 6.5.1 Transport motor (M1)

## 1. Remove the duct cover.

 G.6.2.23 Duct cover/1G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield
5. Open the PWB box.
G.6.3.9 How to open the PWB box/1

7. To reinstall, reverse the order of removal.

### 6.5.2 PC motor (M2)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield.
G.6.2.26 Protective shield
5. Open the PWB box.
G.6.3.9 How to open the PWB box/1

## [2] <br> [1]

7. To reinstall, reverse the order of removal.

### 6.5.3 Fusing motor (M3)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover. G.6.2.25 Upper rear cover
8. Remove the paper cooling fan. G.6.7.7 Paper cooling fan (FM8)
9. Remove four screws [1]. Disconnect the connector [2], and remove the transport motor [3].
10. Remove four screws [1]. Disconnect the connector [2], and remove the PC motor [3].
11. Remove the harness from the harness guide [1].

12. Remove the screw [1], and remove the harness guide [2].
13. To reinstall, reverse the order of removal.

### 6.5.4 Switchback motor (M4)

1. Remove the fusing unit.
F.8.10.1 Replacing the fusing unit (bizhub C658/C558)
F.8.10.2 Replacing the fusing unit (bizhub C458)
2. Remove the control panel left cover.
G.6.2.6 Control panel left cover
3. Remove the control panel right cover. G.6.2.7 Control panel right cover
4. Remove the control panel front cover. G.6.2.9 Control panel front cover
5. Remove the upper right cover. G.6.2.20 Upper right cover
6. Remove the paper exit unit.
G.6.3.19 Paper exit unit
[2] [1

[3]
7. To reinstall, reverse the order of removal.

### 6.5.5 ADU transport motor1 (M5)

1. Remove the ADU transport unit.
G.6.3.18 ADU transport unit
2. Remove the soaking roller pressure solenoid.
G.6.8.5 Soaking roller pressure solenoid (SD5) (bizhub C658/C558)

3. To reinstall, reverse the order of removal.

### 6.5.6 Toner supply motor/K (M6)

1. Remove the upper front door. G.6.2.12 Upper front door
2. Remove the lower front door. G.6.2.13 Lower front door
3. Remove the waste toner box. F.8.7.1 Replacing the waste toner box
4. Remove the front lower cover. G.6.2.14 Front lower cover
5. Remove the front cover. G.6.2.15 Front cover
6. Remove the toner cartridge. F.8.4.1 Replacing the toner cartridge
7. Remove the drum unit. F.8.2.1 Replacing the drum unit
8. Remove the developing unit. F.8.3.1 Replacing the developing unit
9. Remove the exit cover. G.6.2.17 Exit cover
10. Remove the sub hopper unit. G.6.3.4 Sub hopper unit
11. Remove seven screws [1], and remove the belt [2].
12. Disconnect two connectors [1], and remove the harness from the edge cover [2] and the wire saddle [3].
13. Remove the plate [4].
14. Disconnect the connector [1], and remove the ADU transport motor [2].
[2]

15. To reinstall, reverse the order of removal.

### 6.5.7 Toner supply motor/C (M7) (bizhub C658/C558)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover.
G.6.2.22 DF cable cover
7. Remove the upper rear cover
G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
9. Remove the board box/2. G.6.3.10 PWB box/2 (bizhub C658/C558)
[2]

10. To reinstall, reverse the order of removal.
11. Remove the screw [1]. Disconnect the connector [2] and then remove the toner supply motor/K [3].
12. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/C [3].
NOTE

- When removing the toner supply motor/C [3], make sure to turn it in the direction shown in the illustration

11. To reinstall, reverse the order of removal.

### 6.5.9 Toner supply motor/M (M8) (bizhub C658/C558)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
9. Remove the board box/2.
G.6.3.10 PWB box/2 (bizhub C658/C558)
[2]

10. To reinstall, reverse the order of removal.

### 6.5.10 Toner supply motor/M (M8) (bizhub C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover. G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy.
G.6.7.7 Paper cooling fan (FM8)
9. Remove the toner cartridge cooling fan assy.
G.6.7.5 Toner cartridge cooling fan (FM4) (bizhub C458)

## [2]

10. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/M [3].
NOTE

- When removing the toner supply motor/M [3], make sure to turn it in the direction shown in the illustration.

11. To reinstall, reverse the order of removal.

### 6.5.11 Toner supply motor/Y (M9) (bizhub C658/C558)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover G.6.2.25 Upper rear cover
8. Remove the expansion control board. G.6.4.12 Expansion control board (EXCB)

9. Remove the cable from five wire saddles [1].
10. Remove four screws [2], and remove the plate [3].
11. Disconnect the connector [1]
12. Remove the harness from two wire saddles [2].
13. Remove the screw [1]. Remove the screw [3] while moving the harness guide [2] up and then remove the toner supply motor/Y [4]. NOTE

- When removing the toner supply motor/Y [4], make sure to turn it in the direction shown in the illustration.

## G.6.2.23 Duct cover/1

G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover.
G.6.2.22 DF cable cover
7. Remove the upper rear cover
G.6.2.25 Upper rear cover
8. Remove the expansion control board.
G.6.4.12 Expansion control board (EXCB)
9. Remove four screws [1], and remove the plate [2].

[2]

11. Remove the harness from two wire saddles [2].
12. Remove the screw [1]. Remove the screw [3] while moving the harness guide [2] up and then remove the toner supply motor/Y [4].
NOTE

- When removing the toner supply motor/Y [4], make sure to turn it in the direction shown in the illustration.

9. Remove the cable from five wire saddles [1].
10. Remove four screws [2], and remove the plate [3].
11. Disconnect the connector [1], and remove the harness from the harness guide [2].
12. Remove the screw [3], and remove the toner cartridge motor/YM [4].

NOTE

- When removing the toner cartridge motor/YM [4], make sure to turn it in the direction as illustrated in the figure.

13. To reinstall, reverse the order of removal.

### 6.5.14 Toner cartridge motor/Y,M (M10) (bizhub C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover.
G.6.2.25 Upper rear cover
8. Remove the expansion control board. G.6.4.12 Expansion control board (EXCB)
9. Remove four screws [1], and remove the plate [2].

[4] [1]
10. To reinstall, reverse the order of removal.
11. Disconnect the connector [1], and remove the harness from the harness guide [2].
12. Remove the screw [3], and remove the toner cartridge motor/YM [4]. NOTE

- When removing the toner cartridge motor/YM [4], make sure to turn it in the direction as illustrated in the figure.

### 6.5.15 Fusing pressure motor (M11)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover.
G.6.2.22 DF cable cover
7. Remove the upper rear cover
G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)

[2]
9. To reinstall, reverse the order of removal.

### 6.5.16 Tray 1 lift-up motor (M12)

1. Remove the duct cover
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield
5. Open the PWB box.
G.6.3.9 How to open the PWB box/1
6. Remove the high voltage unit. G.6.4.11 High voltage unit (HV)
7. Slide out the tray 1.

[1]
8. To reinstall, reverse the order of removal.

### 6.5.17 Tray 2 lift-up motor (M13)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield
5. Open the PWB box.
G.6.3.9 How to open the PWB box/1
6. Remove the high voltage unit.
G.6.4.11 High voltage unit (HV)
7. Slide out the tray 2.

8. To reinstall, reverse the order of removal.

### 6.5.18 Developing motor (M21)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield
G.6.2.26 Protective shield
5. Open the PWB box/1.
G.6.3.9 How to open the PWB box/1
[3] [1]

[2] [1]
6. To reinstall, reverse the order of removal.

### 6.5.19 Paper feed motor (M22)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield
5. Open the PWB box.
G.6.3.9 How to open the PWB box/1
6. Remove the high voltage unit.
G.6.4.11 High voltage unit (HV)
[1]

7. Remove three screws [1]. Disconnect the connector [2], and remove the tray 2 lift-up motor [3].
8. Remove four screws [1]. Disconnect the connector [2], and remove the developing motor [3].
[2]

[2][1][3]
[2]

[2]

[2]
[1]

9. To reinstall, reverse the order of removal.

### 6.5.20 Tray 2 vertical transport motor (M23)

1. Remove the rear right cover. G.6.2.19 Rear right cover
2. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
3. Remove the toner filter.
F.8.1.1 Replacing the toner filter
4. Remove the lower rear cover.
G.6.2.21 Lower rear cover
5. Remove the protective shield.
G.6.2.26 Protective shield
6. Open the PWB box.
G.6.3.9 How to open the PWB box/1
7. Release the tab [1] and remove the cable guide [2].
8. Disconnect the connector [1]
9. Remove six screws [2], and remove the paper feed motor [3].
10. Remove five screws [1], and remove the cover [2].
11. Remove the gear [1].
12. Remove two screws [2], and remove the paper feed motor [3].

13. To reinstall, reverse the order of removal.

### 6.5.21 Registration motor (M24) (bizhub C658)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the protective shield G.6.2.26 Protective shield
5. Open the PWB box/1.
G.6.3.9 How to open the PWB box/1

6. Disconnect the connector [1]
7. Remove three screws [2], and remove the plate [3]
8. Remove three screws [1], and remove the tray 2 vertical transport motor assy [2].
9. Remove two screws [1], and remove the tray 2 vertical transport motor [2].
10. Disconnect the connector [1]
11. Remove two screws [2], and remove the registration motor assy [3].

12. To reinstall, reverse the order of removal.

### 6.5.22 Toner cartridge motor/C,K (M25) (bizhub C658/C558)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
9. Remove the board box/2. G.6.3.10 PWB box/2 (bizhub C658/C558)
[1]

10. To reinstall, reverse the order of removal.
11. Remove two screws [1], and remove the registration motor [2].
12. Disconnect the connector [1], and remove the harness from two harness guides [2].
13. Remove the screw [3], and remove the toner cartridge motor/CK [4]. NOTE

- When removing the toner cartridge motor/CK [4], make sure to turn it in the direction as illustrated in the figure.

### 6.5.23 Toner cartridge motor/C,K (M25) (bizhub C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover. G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy.
G.6.7.7 Paper cooling fan (FM8)
9. Remove the toner cartridge cooling fan assy.
G.6.7.5 Toner cartridge cooling fan (FM4) (bizhub C458)

10. To reinstall, reverse the order of removal.
11. Disconnect the connector [1], and remove the harness from two harness guides [2].
12. Remove the screw [3], and remove the toner cartridge motor/CK [4]. NOTE

- When removing the toner cartridge motor/CK [4], make sure to turn it in the direction as illustrated in the figure.

### 6.5.24 ADU transport motor2 (M26)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield.
G.6.2.26 Protective shield
5. Open the PWB box/1.
G.6.3.9 How to open the PWB box/1

[1]

6. Remove four screws [1], ground terminal [2], and remove the plate [3].
7. Remove two solderless terminals [1].

[1]

8. Remove two screws [1], and remove the harness guide [2].
9. Remove two screws [1], and remove the ADU transport motor 2 assy [2].
10. Disconnect the connector [1]
11. Remove two screws [2], and remove the ADU transport motor 2 [3].
12. Disconnect the connector [1], and remove three screws [2].
[2]

[2]
(2) Reinstall procedure

13. Carry out the [Service Mode] -> [Machine] -> [Scan Area] -> [Main Scan Zoom Adj.].

### 6.6 Disassembly/reassembly procedure (Clutches)

### 6.6.1 Tray 2 paper feed clutch (CL1)

1. Remove the paper feed unit. G.6.3.2 Paper feed unit
2. Remove the E-ring [1].

[1]
[2]

[1]
3. Remove two screws [1], and remove the gear cover [2].
4. Remove the gear [1].
5. Disconnect the connector [1], and remove the harness from two wire saddles [2].
6. Remove the E-ring [3], and remove the tray 2 paper feed clutch [4]. NOTE

- When mounting the tray 2 paper feed clutch [2], set the convex part of the stopper into the concave part of the tray 2 paper feed clutch.

### 6.6.2 Registration clutch (CL4)

1. Remove the waste toner box
F.8.7.1 Replacing the waste toner box
2. Remove the transfer belt unit.
F.8.5.3 Replacing the transfer belt unit
3. Remove the upper front door.
G.6.2.12 Upper front door
4. Remove the lower front door. G.6.2.13 Lower front door
5. Remove the front lower cover. G.6.2.14 Front lower cover
6. Remove the front cover. G.6.2.15 Front cover
7. Remove the transport unit. G.6.3.12 Transport unit

8. To reinstall, reverse the order of removal.

### 6.6.3 1st transfer pressure clutch (CL5)

1. Remove the fusing drive unit.
G.6.3.14 Fusing drive unit (bizhub C658/C558)
G.6.3.15 Fusing drive unit (bizhub C458)

[3] [4] [1] [2]
2. To reinstall, reverse the order of removal.

### 6.6.4 Bypass paper feed clutch (CL7)

[1]

[2]

[1]

[2]
4. To reinstall, reverse the order of removal.
8. Remove the E-ring [2]. Disconnect the connector [1], and remove the registration clutch [3].
NOTE

- When mounting the registration clutch, set the convex part of the stopper into the concave part of the registration clutch [3].

2. Remove the harness from the wire saddle [1] and the edge cover [2]
3. Remove the E-ring [3] and the bushing [4], and remove the 1st transfer pressure clutch [6] while pulling out the shaft [5].
NOTE

- When mounting the 1st transfer pressure clutch [6], set the convex part of the stopper into the concave part of the 1st transfer pressure clutch.

1. Remove the screw [1], and remove the connector cover [2].
2. Disconnect the connector [1], and remove the harness from the wire saddle [2], harness guide [3], and edge cover [4].
3. Remove the E-ring [1], and remove the bypass paper feed clutch [2]. NOTE

- When mounting the bypass paper feed clutch, set the convex part of the stopper into the concave part of the bypass paper feed clutch [2].

### 6.6.5 Paper exit clutch (CL8)

1. Remove the fusing drive unit.
G.6.3.14 Fusing drive unit (bizhub C658/C558)
G.6.3.15 Fusing drive unit (bizhub C458)

2. To reinstall, reverse the order of removal.

### 6.6.6 Paper exit deceleration clutch (CL9)

1. Remove the fusing unit.
F.8.10.1 Replacing the fusing unit (bizhub C658/C558)
F.8.10.2 Replacing the fusing unit (bizhub C458)
2. Remove the control panel left cover. G.6.2.6 Control panel left cover
3. Remove the control panel right cover. G.6.2.7 Control panel right cover
4. Remove the control panel front cover. G.6.2.9 Control panel front cover
5. Remove the upper right cover. G.6.2.20 Upper right cover
6. Remove the paper exit unit. G.6.3.19 Paper exit unit
[2]

[1]

7. Remove the harness from the edge cover [1].
8. Remove the E-ring [2] and the bushing [3], and remove the paper exit clutch [5] while pulling out the shaft [4].

## NOTE

- When mounting the paper exit clutch, set the convex part of the stopper into the concave part of the paper exit clutch [5].

7. Remove three screws [1] and remove the cover [2].
8. Remove the gear [1], and remove the belt [2].
9. Remove the gear [3], and remove the belt [4].
10. Remove two pins [1] and two flanges [2], and then remove the gear [3].

[2]

## [1]

[2]
11. NOTE

- When installing the gear, align the raised area of the spring [1] with the hole in the frame [2].

12. Remove two screws [1], and remove the switchback motor assy [2].
13. Disconnect the connector [1], and remove the paper exit deceleration clutch assy [2].
14. Remove the E-ring [1], and remove the clutch [2].

[2]
15. To reinstall, reverse the order of removal.

### 6.7 Disassembly/reassembly procedure (Fans)

### 6.7.1 Power supply cooling fan (FM1)

1. Remove the left cover.
G.6.2.16 Left cover
2. Remove the exit cover.
G.6.2.17 Exit cover

[1]
3. Remove six screws [1], and remove the DC power supply protective shield [2].
[3]

[1]

[2] [1]
4. To reinstall, reverse the order of removal.

### 6.7.2 Transfer belt cleaner cooling fan (FM2)

1. Remove the left cover.
G.6.2.16 Left cover
2. Remove the exit cover.
G.6.2.17 Exit cover
3. Remove the DC power supply. G.6.4.5 DC power supply (DCPU)
4. Remove the upper front door G.6.2.12 Upper front door
5. Remove the lower front door.
G.6.2.13 Lower front door
6. Remove the waste toner box
F.8.7.1 Replacing the waste toner box
7. Remove the front lower cover
G.6.2.14 Front lower cover
8. Remove the front cover.
G.6.2.15 Front cover
9. Remove the toner cartridge/ $\mathrm{Y}, \mathrm{M}, \mathrm{C}, \mathrm{K}$. F.8.4.1 Replacing the toner cartridge
10. Remove the drum unit/Y,M,C,K F.8.2.1 Replacing the drum unit
11. Remove the developing unit. F.8.3.1 Replacing the developing unit
12. Remove the transfer belt unit. F.8.5.3 Replacing the transfer belt unit
13. Remove the sub hopper unit. G.6.3.4 Sub hopper unit
14. Disconnect the connector [1]
15. Remove two screws [2], and remove the power supply cooling fan assy [3].
16. Disconnect the connector [1], and remove the harness from the harness guide.
17. Remove the screw [1], and remove the retainer plate [2].
18. Remove the tab [3], and remove the power supply cooling fan [4].
[2]

[1]
[1]

[1]

[2]

[2]

19. To reinstall, reverse the order of removal.
20. Remove the screw [1], and remove the harness guide [2].
21. Remove the rail [1].
22. Remove the screw [1], and remove the waste toner pipe [2].
23. Remove the connector [1], and release three tabs [2].
24. Remove the screw [3], and remove the transfer belt cleaner cooling fan assy [4].
25. Remove the harness from harness guide [1].
26. Remove two screws [2], and remove the transfer belt cleaner cooling fan [3].

### 6.7.3 Rear side cooling fan (FM3)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.

## F.8.1.1 Replacing the toner filter

3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Open the PWB box/1.
G.6.3.9 How to open the PWB box/1
[2]

[1]
5. Remove the harness from the wire saddle [1], and disconnect the connector [2].
6. Remove two screws [1], and remove the rear side cooling fan [2].

[2]
7. To reinstall, reverse the order of removal.

### 6.7.4 Toner cartridge cooling fan (FM4) (bizhub C658/C558)

1. Remove the toner cartridge/K.
F.8.4.1 Replacing the toner cartridge
2. Remove the left cover.
G.6.2.16 Left cover
3. Remove the exit cover.
G.6.2.17 Exit cover
4. Remove the screw [1], and remove the cover [2].

[1]

[2]
5. Remove two screws [1], and remove the toner cartridge cooling fan assy [2].

6. Remove the harness from three wire saddles [1].
7. Disconnect the connector [2], and remove the toner cartridge cooling fan assy [3].
8. Remove three tabs [1], and remove the cover [2].
9. Remove the toner cartridge cooling fan [1].
10. To reinstall, reverse the order of removal.

### 6.7.5 Toner cartridge cooling fan (FM4) (bizhub C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover. G.6.2.25 Upper rear cover
8. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)

9. Disconnect the connector [1].
[2]

10. To reinstall, reverse the order of removal.

### 6.7.6 IH coil cooling fan (FM7)

1. Remove the upper front door G.6.2.12 Upper front door
2. Remove the lower front door. G.6.2.13 Lower front door
3. Remove the waste toner box. F.8.7.1 Replacing the waste toner box
4. Remove the front lower cover. G.6.2.14 Front lower cover
5. Remove the front cover. G.6.2.15 Front cover
6. Remove the toner cartridge. F.8.4.1 Replacing the toner cartridge
7. Remove the drum unit. F.8.2.1 Replacing the drum unit
8. Remove the developing unit. F.8.3.1 Replacing the developing unit
9. Remove the exit cover. G.6.2.17 Exit cover
10. Remove the sub hopper drive unit. G.6.3.4 Sub hopper unit
[2]

[1]

[2]
[2]

[1]
[3]
11. To reinstall, reverse the order of removal.
12. Remove the harness from the harness guide [1].
13. Remove the filter [2], and remove the toner cartridge cooling fan [2].
14. Remove two screws [1], and remove the IH coil cooling fan [2].
15. Remove the harness from two wire saddles [3].
16. Remove two screws [1], and remove the duct [2].
17. Remove the harness from the edge cover [1].
18. Disconnect the connector [2], and remove the IH coil cooling fan [3]

### 6.7.7 Paper cooling fan (FM8)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the scanner left cover. G.6.2.4 Scanner left cover
5. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
6. Remove the DF cable cover. G.6.2.22 DF cable cover
7. Remove the upper rear cover. G.6.2.25 Upper rear cover
[2]

[1]
[2]

[1]
8. Remove three screws [1], and remove the louver [3].
9. Remove the screw [1], and remove the duct [2].
10. Remove five screws [1], and remove the paper cooling fan assy [2].
11. Disconnect the connector [1], and remove the paper cooling fan assy [2].
[2]

[3]
12. Peel off the tape [1]
13. Remove two screws [2], and remove the paper cooling fan [3].
14. Remove three screws [1], and remove the cover [2].
15. Remove two screws [1].
16. Remove the duct [1].
[4]

[3]

[2]
[1]

[2]
17. To reinstall, reverse the order of removal.

### 6.7.9 Fusing power supply cooling fan (FM12)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the scanner left cover.
G.6.2.4 Scanner left cover
5. Remove the scanner rear cover.
G.6.2.1 Scanner rear cover
6. Remove the DF cable cover.
G.6.2.22 DF cable cover
7. Remove the upper rear cover.
G.6.2.25 Upper rear cover
8. Remove the left cover. G.6.2.16 Left cover
9. Remove the exit cover. G.6.2.17 Exit cover
10. Remove the output rear cover. G.6.2.18 Output rear cover
11. Remove the harness from the edge cover [1], and disconnect the connector [2].
12. Remove the screw [3], and remove the board box [4].
13. Remove four screws [1], and remove the toner suction fan assy [2].
14. Remove two screws [1], and remove the toner suction fan [2].

15. To reinstall, reverse the order of removal.

### 6.7.10 UFP exhaust fan1 (FM17)

1. Remove the ADU transport unit. G.6.3.18 ADU transport unit
[1]

[2]

2. To reinstall, reverse the order of removal.

### 6.7.11 UFP exhaust fan2 (FM18)

1. Remove the ADU transport unit.
G.6.3.18 ADU transport unit
2. Remove the UFP exhaust fan 1. G.6.7.10 UFP exhaust fan1 (FM17)
3. Remove three screws [1], and remove the cover [2].
4. Disconnect the connector [1], and remove the harness from two wire saddles [2].
5. Remove two screws [3], and remove the fusing power supply cooling fan [4]
6. Remove two screws [1], and remove the cover [2].
7. Disconnect the connector [1], and remove the harness from the wire saddle [2] and harness guide [3].
8. Remove two screws [4], and remove the UFP exhaust fan 1 [5].

9. Remove two screws [1], and remove the duct [2].
10. Disconnect the connector [1], and remove the harness from the wire saddle [2] and harness guide [3].
11. Remove two screws [4], and remove the UFP exhaust fan 2 [5].
12. To reinstall, reverse the order of removal.

### 6.8 Disassembly/reassembly procedure (etc.)

### 6.8.1 Bypass pick-up solenoid (SD1)

1. Remove the manual bypass tray unit.
G.6.3.6 Manual bypass tray unit
[2]

[1]
2. Remove the E-ring [1], and remove the actuator [2].
3. Remove the harness from two wire saddles [1] and the edge cover [2].
4. Remove the harness from two harness guides [3].
5. Remove three screws [1], and remove the solenoid cover [2].

6. To reinstall, reverse the order of removal.

### 6.8.2 IDC sensor shutter solenoid (SD2)

1. Remove the transport unit.
G.6.3.12 Transport unit

[2]
[2]

[1]
2. To reinstall, reverse the order of removal.

### 6.8.3 Gate switch solenoid (SD3)

1. Remove the fusing unit.
F.8.10.1 Replacing the fusing unit (bizhub C658/C558)
F.8.10.2 Replacing the fusing unit (bizhub C458)
2. Remove the control panel left cover.
G.6.2.6 Control panel left cover
3. Remove the control panel right cover.
G.6.2.7 Control panel right cover
4. Remove the control panel front cover.
G.6.2.9 Control panel front cover
5. Remove the upper right cover.
G.6.2.20 Upper right cover
6. Remove the paper exit unit.
G.6.3.19 Paper exit unit
7. Remove the screw [1], and remove the cover [2].
8. Disconnect the connector [3], and remove the bypass pick-up solenoid assy [4].
9. Remove the screw [1], and remove the bypass pick-up solenoid [2].
10. Remove the harness from two wire saddles [1], and disconnect the connector [2].
11. Remove the screw [1], and remove the IDC sensor shutter solenoid [2].

12. To reinstall, reverse the order of removal.

### 6.8.4 Developing solenoid (SD4)

1. Remove the duct cover
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield
5. Open the PWB box. G.6.3.9 How to open the PWB box/1
6. Remove the high voltage unit. G.6.4.11 High voltage unit (HV)

[6] [5] [4]
7. To reinstall, reverse the order of removal.

### 6.8.5 Soaking roller pressure solenoid (SD5) (bizhub C658/C558)

1. Remove the ADU transport unit.
G.6.3.18 ADU transport unit
[2]

[1]
2. Remove two screws [1], and remove the duct [2].
[2]

[1]
[2]

[1]
[2]

[1]
3. To reinstall, reverse the order of removal.

### 6.8.6 FAX speaker (SP1)

1. Remove the control panel left cover. G.6.2.6 Control panel left cover
2. Remove the control panel right cover. G.6.2.7 Control panel right cover
3. Remove the control panel upper cover. G.6.2.8 Control panel upper cover
4. Remove the control panel front cover. G.6.2.9 Control panel front cover
5. Remove the control panel unit. G.6.2.10 Control panel unit

[3] [1]
6. Remove two screws [1], and remove the soaking roller pressure solenoid assy [2].
7. Remove two screws [1], and remove the soaking roller pressure solenoid [2].
8. Remove the cable from two wire saddles [1].
9. Remove four screws [2], and remove the FAX speaker assy [3].

10. To reinstall, reverse the order of removal.

### 6.8.7 Bypass CD paper size VR (VR1)

1. Open the bypass tray.

2. Remove five screws [1], and remove the cover [2].
3. Remove the harness from the harness guide [1].
4. Remove the harness from two wire saddles [1].
5. Remove four screws [2], and remove the bypass CD paper size VR assy [3].
6. Remove the gear [1].

7. Remove two screws [1].
8. Disconnect the connector [2], and remove the bypass CD paper size VR [3].

## 7. Dual scan document feeder

### 7.1 Disassembly/reassembly parts list

### 7.1.1 Exterior parts

| No. | Part name | Ref. page |
| :---: | :--- | :--- |
| 1 | Front cover | G.7.2.1 Front cover (dual scan document feeder) |
| 2 | Rear cover | G.7.2.2 Rear cover (dual scan document feeder) <br> G.7.2.3 How to open the document feed tray (dual scan <br> document feeder) |
| 3 | How to open the document feed tray | G.7.2.4 Stamp unit cover (dual scan document feeder) |
| 4 | Stamp unit cover |  |

### 7.1.2 Units

| No. | Part name | Ref. page |
| :---: | :--- | :--- |
| 1 | Lower guide assembly | G.7.2.5 Lower guide assembly (dual scan document <br> feeder) |
| 2 | Dual scan document feeder | G.7.2.6 Dual scan document feeder |
| 3 | Front side glass cleaning roller unit | G.7.2.7 Front side glass cleaning roller unit (dual scan <br> document feeder) |
| 4 | Back side glass cleaning roller unit | G.7.2.8 Back side glass cleaning roller unit (dual scan <br> document feeder) |
| 5 | CIS module (CIS) | G.7.2.9 CIS module (CIS) (dual scan document feeder) |

### 7.1.3 Boards

| No. | Part name | Ref. page |
| :---: | :--- | :--- |
| 1 | DF control board (DFCB) | G.7.2.10 DF control board (DFCB) (dual scan document <br> feeder) |
| 2 | Restriction plate positional volume (VR1) | G.7.2.11 Restriction plate positional volume (VR1) (dual <br> scan document feeder) |
| 3 | DF power supply (DFPU) | G.7.2.12 DF power supply (DFPU) (dual scan document <br> feeder) |
| 4 | Sensor control board (SCB) | G.7.2.13 Sensor control board (SCB) |
| 5 | Multi feed detection board/1 (transmitter) (MFDB/1) | G.7.2.14 Multi feed detection board/1 (transmitter) <br> (MFDB/1) (UK-501) |
| 6 | Multi feed detection board/2 (receiver) (MFDB/2) | G.7.2.15 Multi feed detection board/2 (receiver) <br> $(M F D B / 2)$ |

### 7.1.4 etc.

| No. | Part name | Ref. page |
| :---: | :--- | :--- |
| 1 | Take-up motor (M1) | G.7.2.16 Take-up motor (M1) (dual scan document <br> feeder) |
| 2 | Registration motor (M2) | G.7.2.17 Registration motor (M2) (dual scan document <br> feeder) |
| 3 | Reading motor (M3) | G.7.2.18 Reading motor (M3) (dual scan document <br> feeder) |
| 4 | Exit motor (M4) | G.7.2.19 Exit motor (M4) (dual scan document feeder) |
| 5 | Reading roller pressure/retraction motor (M6) | G.7.2.20 Reading roller pressure/retraction motor (M6) <br> (dual scan document feeder) |
| 6 | Back side cleaning motor (M7) | G.7.2.21 Back side cleaning motor (M7) (dual scan <br> document feeder) |
| 7 | Front side cleaning motor (M8) | G.7.2.22 Front side cleaning motor (M8) (dual scan <br> document feeder) |
| 8 | Take-up clutch (CL1) | G.7.2.23 Take-up clutch (CL1) (dual scan document <br> feeder) |
| 9 | Cooling fan motor (FM) | G.7.2.24 Cooling fan motor (FM) (dual scan document <br> feeder) |
| 10 | Separation roller torque limiter | G.7.2.25 Replacing the separation roller torque limiter <br> (dual scan document feeder) |
| 11 | Stamp unit | G.7.2.26 Stamp unit (SP-501) |
| 12 | Spare TX Marker Stamp 2 | G.7.2.27 Stamp (SP-501) |

### 7.2 Disassembly/reassembly procedure (dual scan document feeder/UK-501/SP-501)

### 7.2.1 Front cover (dual scan document feeder)

1. Open the dual scan document feeder.

2. To reinstall, reverse the order of removal.

### 7.2.2 Rear cover (dual scan document feeder)

(1) Removal

1. Open the dual scan document feeder.
2. Remove four screws [1].

## NOTE

- If the dual scan document feeder is set to be lifted up at angles up to 60 degrees due to the set position of the stopper for the hinge, change the set position to the lower side so that the dual scan document feeder can be opened completely.

3. Open the left cover [1].

4. Slightly lift up the document feed tray [1].
5. Remove the rear cover [2].
6. To reinstall, reverse the order of removal.

### 7.2.3 How to open the document feed tray (dual scan document feeder)

NOTE

- The document feed tray has a lock mechanism that includes either a movable lock lever or a fixed lock lever.
- Perform the job in accordance with the type of lock mechanism.
[1]

| $[1] ~ D o c u m e n t ~ f e e d ~ t r a y ~$ | [2] $\quad$ Document feed tray lock lever |
| :--- | :--- | :--- |

(1) Document feed tray with a movable lock lever

1. Open the left cover [1].

[1]

(2) Document feed tray with a fixed lock lever
2. Remove the front cover.
G.7.2.1 Front cover (dual scan document feeder)
3. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

[1] [3]
4. While pushing down the document feed tray lock lever [1], raise the document feed tray.
NOTE

- During the procedure, hold and support the document feed tray so that it is not closed.

3. Remove three screws [1]. Then, remove two document feed tray lock pins [2] and one document feed tray lock lever [3].
NOTE

- The document feed tray lock lever [3] may be a lock pin depending on the timing at which the product was manufactured (the job procedure, however, remains the same).

4. Open the document feed tray.

NOTE

- During the procedure, hold and support the document feed tray so that it is not closed.

### 7.2.4 Stamp unit cover (dual scan document feeder)

NOTE

- The stamp unit cover is available in two types, either a snap-fit type or a screw fixing type.
- Perform the procedure in accordance with the applicable cover fixing method.

## (1) For a snap-fit stamp unit cover

1. Open the document feed tray.
G.7.2.3 How to open the document feed tray (dual scan document feeder)

(2) For a screw fixing stamp unit cover
2. Open the document feed tray.
G.7.2.3 How to open the document feed tray (dual scan document feeder)
[1] [2]

### 7.2.5 Lower guide assembly (dual scan document feeder)

## (1) Procedure

1. Remove the front cover.
G.7.2.1 Front cover (dual scan document feeder)
2. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

## [1]

[1]
4. Open the document feed tray.
G.7.2.3 How to open the document feed tray (dual scan document feeder)
5. Remove three screws [1].

[3]

8. To reinstall, reverse the order of removal.
6. Disconnect the connector [1], remove the screw [2], and disconnect the ground wire [3].
7. Remove the lower guide assy [1].

### 7.2.6 Dual scan document feeder

2. Remove the DF cable cover. G.6.2.22 DF cable cover
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover

[1]

1. Remove the screws [1], and remove the cable tie [2].
2. Remove the harness [1] from the wire guide [2].
[2]

[1]
[2]

[1]

3. Remove two screws [1], and remove the metal plate [2].
4. Remove the harness from the two wire saddles [1], and disconnect the connector [2].
5. Disconnect three connectors [1].
6. Change the set position of the stopper [1] to the lower side. NOTE

- After installing the dual scan document feeder, make sure to return the stopper [1] of the hinge to the upper side.

9. Open the dual scan document feeder at 90 degrees.
10. Remove two screws [1].

11. Remove the dual scan document feeder [1].
12. NOTE

- When carrying the dual scan document feeder, be sure to hold onto the specified positions. The feeder main body can be distorted if held at inappropriate positions.
- After removing the dual scan document feeder from the machine, place it on the floor or the like as shown in the illustration.

13. To reinstall, reverse the order of removal.

### 7.2.7 Front side glass cleaning roller unit (dual scan document feeder)

1. Open the dual scan document feeder.

> 2. Remove the C-clip [1] and the bushing [2].

[1]
[2]

3. Remove two C-clips [1] shift the bushing [2], and remove the belt [3].
4. Remove the front side glass cleaning roller unit [2] while opening the pre-read sheet assy [1].
5. To reinstall, reverse the order of removal.

NOTE

- When installing the front side glass cleaning roller unit, the following adjustment is necessary.

1. Adjust the actuator [1] so that it is positioned where it blocks the light of the front side cleaning home sensor [2], and install the belt.

[2]
2. Align the $D$ cut surface [1] of the shaft with the lines [2] marked on the bushing.

### 7.2.8 Back side glass cleaning roller unit (dual scan document feeder)

1. Open the dual scan document feeder.
[1]

2. Open the opening and closing guide [1].
3. While peeling off the mat, remove the screw [1], and while opening the opening and closing guide, remove the cover [2].

##  <br> [2] [1]

4. Remove the screw [1] and the C-clip [2], and remove the bushing [3].

5. Remove the C-clip [1].
6. Remove the gear [2], and remove the belt [3].
7. Remove the bearing [4].
8. Remove the back side glass cleaning roller unit [5].
9. To reinstall, reverse the order of removal.

## NOTE

- When installing the back side glass cleaning roller unit, the following adjustment is necessary.
[1]

[2]

1. Align the D cut surface [1] of the shaft with the lines [2] marked on the bushing.
2. When installing the belt, align the line [1] on the pulley and the line [2] on the transport guide.

### 7.2.9 CIS module (CIS) (dual scan document feeder)

1. Remove the lower guide assembly.
G.7.2.5 Lower guide assembly (dual scan document feeder)

## [1]

3. Remove two screws (front side) [1].
4. Remove the screw (rear side) [1].

[1]
2. Remove the screw [1], and disconnect two connectors [1].
5. Remove the CIS module [1] as shown in the illustration.
6. Remove the E-rings [1] on the right and left, and remove the plates [2].

7. To reinstall, reverse the order of removal.

NOTE

- Be sure to perform the following steps after the CIS module has been replaced with a new one.
- Adjust the back side skew feed on the dual scan document feeder.
I.13.1.3 Adjusting back side skew feed on dual scan document feeder
- Execute [Service Mode] -> [System 2] -> [CCD Calibration] .
- Execute [Service Mode] -> [System 2] -> [Line Mag Setting] .
- Execute [Service Mode] -> [ADF] -> [Auto Stop Position Adjustment] .
- Execute [Service Mode] -> [ADF] -> [FD-Mag. Adj. (B)] .
- Execute [Service Mode] -> [ADF] -> [Main Scanning Direction Zoom] .

### 7.2.10 DF control board (DFCB) (dual scan document feeder)

1. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

## [2]

[1]
2. Remove all connectors from the board.
3. Remove four screws [1], and remove the DF control board [2].
4. To reinstall, reverse the order of removal.

## NOTE

- Install the firmware when the DF control board is replaced.
- Restore the data by executing [Service Mode] -> [Enhanced Security] -> [ADF Data Backup] -> [ADF Data Reflect Mode] when the DF control board is replaced.

### 7.2.11 Restriction plate positional volume (VR1) (dual scan document feeder)

1. Remove the front cover.
G.7.2.1 Front cover (dual scan document feeder)
2. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

[1] [2]
3. Remove three screws [1] and remove three pins [2].
4. Remove three tabs [1].
5. Turning the document feed tray [2] and remove it.
6. Remove two screws [1] and disconnect the connector [2], and remove the restriction plate positional volume [3].

- For mounting the restriction plate positional volume, mount it in the direction shown on the illustration.

8. To reinstall, reverse the order of removal.

NOTE

- Be sure to perform the following operation when the restriction plate positional volume is replaced.
- Execute [Service Mode] -> [ADF] -> [Original Tray Width] .
- Turn OFF the main power switch and turn it ON again and check whether size detection operates normally.

### 7.2.12 DF power supply (DFPU) (dual scan document feeder)

1. Remove the lower guide assy.
G.7.2.5 Lower guide assembly (dual scan document feeder)
2. Open the protective sheet [1].

[1]
3. Disconnect two connectors [1].
$[3] \quad[4] \quad[2]$

4. Remove the harness from the edge cover [2].
5. Remove two screws [3] and remove the DF power supply [4].
6. Disconnect three connectors [1], remove four screws [2], and remove the sensor control board [3].

7. To reinstall, reverse the order of removal. NOTE

- Be sure to perform the following steps after the sensor control board has been replaced with a new one.
- Execute [Service Mode] -> [ADF] -> [Multi-Feed DetectionAdj] .

### 7.2.14 Multi feed detection board/1 (transmitter) (MFDB/1) (UK-501)

1. Remove the lower guide assy.
G.7.2.5 Lower guide assembly (dual scan document feeder)
[2] [4]

2. To reinstall, reverse the order of removal.
3. Remove two screws [1], and disconnect the ground wire [2].
4. Disconnect the connector [3] and remove the multi feed detection board/1 [4].

## 5. NOTE

- Install the board so that the sensor [1] fits into the depression [2].

6. NOTE

- Be sure to perform the following steps after the multi feed detection board/1 (transmitter) has been replaced with a new one.
- Execute [Service Mode] -> [ADF] -> [Multi-Feed DetectionAdj] .

### 7.2.15 Multi feed detection board/2 (receiver) (MFDB/2)

[1]

1. Remove the cover from the dual scan document feeder [1].
2. Remove the screw [1] and pull out the multi feed detection board/2 [2].
3. Disconnect the connector [1] and remove the multi feed detection board/2 [2].

[^25]
6. NOTE

- Be sure to perform the following steps after the multi feed detection board/2 (receiver) has been replaced with a new one.
- Execute [Service Mode] -> [ADF] -> [Multi-Feed DetectionAdj] .

### 7.2.16 Take-up motor (M1) (dual scan document feeder)

1. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

[3]
2. Remove the screw, and disconnect the ground wire [1].
3. Remove six wire saddles [2] and disconnect six connectors [3].
4. Remove two screws [1].

[1]

[2]

5. Remove the screw [1], E-ring [2], and bushing [3].
6. Remove three screws [4] and remove the take-up motor assy [5].
[2]

[1]
]
7. To reinstall, reverse the order of removal.

### 7.2.17 Registration motor (M2) (dual scan document feeder)

1. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)
2. Remove the roller pressure/retraction motor.
G.7.2.20 Reading roller pressure/retraction motor (M6) (dual scan document feeder)
3. Remove the reading motor.
G.7.2.18 Reading motor (M3) (dual scan document feeder)

4. Remove the two screws [1] and remove the take-up motor [2].
let
[2]

[1]
5. Remove two screws [1] and remove the reading motor [2].
(2) Reinstall procedure

6. Install the reading motor assy [2] with two screws [1].
7. Connect the connector [3].
8. Loosen the screw [4] and apply tension to the belt.
9. Tighten the screw [4].
10. Loosen the screw [1] and move the tension plate [2] in the direction of the arrow to reduce the belt tension.
11. Tighten the screw [1].
7.2.19 Exit motor (M4) (dual scan document feeder)
12. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

[2]
13. Disconnect the connector [1], remove two screws [2], and remove the exit
motor assy [3].
14. Remove two screws [1] and remove the exit motor [2].
[2]

15. To reinstall, reverse the order of removal.
7.2.20 Reading roller pressure/retraction motor (M6) (dual scan document feeder)
16. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

## [1] [3]

[2]
[2]

[1]
[2]

[1]
[2]

7. To reinstall, reverse the order of removal.
2. Disconnect the connector [1].
3. Remove the harness [3] from three wire saddles [2] and the harness guide.
4. Remove four screws [1] and remove the reading roller pressure/retraction motor assy [2].
5. Disconnect the connector [1] and remove the reading roller pressure/retraction motor assy [2].
6. Remove two screws [1] and remove the reading roller pressure/retraction motor [2].

### 7.2.21 Back side cleaning motor (M7) (dual scan document feeder)

1. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

[2]
2. To reinstall, reverse the order of removal.

### 7.2.22 Front side cleaning motor (M8) (dual scan document feeder)

1. Remove the front cover.
G.7.2.1 Front cover (dual scan document feeder)
[3]

2. Disconnect the connector [1]
3. Remove two screws [2] and remove the front side cleaning motor [3].
4. To reinstall, reverse the order of removal.

### 7.2.23 Take-up clutch (CL1) (dual scan document feeder)

1. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)
2. Remove the take-up motor assy.
G.7.2.16 Take-up motor (M1) (dual scan document feeder)
[2]

[1]
3. To reinstall, reverse the order of removal.

### 7.2.24 Cooling fan motor (FM) (dual scan document feeder)

1. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)

2. Remove two wire saddles [1], disconnect the connector [2], and remove the harness from the wire guide.
3. Remove two screws [3] and remove the cooling fan motor [4].
4. To reinstall, reverse the order of removal.

### 7.2.25 Replacing the separation roller torque limiter (dual scan document feeder)

1. Open the left cover [1].

[1]

2. To reinstall, reverse the order of removal.

### 7.2.26 Stamp unit (SP-501)

## 1. Remove the front cover

G.7.2.1 Front cover (dual scan document feeder)
2. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)
3. Open the document feed tray.
G.7.2.3 How to open the document feed tray (dual scan document feeder)
4. Remove the stamp unit cover
G.7.2.4 Stamp unit cover (dual scan document feeder)

7. To reinstall, reverse the order of removal.
8. NOTE

- When reinstalling the stamp unit, make sure that the harness [1] does not interfere with the roller.

### 7.2.27 Stamp (SP-501)

1. Remove the front cover.
G.7.2.1 Front cover (dual scan document feeder)
2. Remove the rear cover.
G.7.2.2 Rear cover (dual scan document feeder)
3. Open the document feed tray.
G.7.2.3 How to open the document feed tray (dual scan document feeder)
4. Remove the stamp unit cover.
G.7.2.4 Stamp unit cover (dual scan document feeder)

5. Remove the used stamp [1] and install the spare TX marker stamp [2]. NOTE

- Align the round pin of the stamp to the groove in the stamp unit.

## 8. Option

### 8.1 Disassembly/reassembly parts list (bizhub C368/C308/C258)

### 8.1.1 DF-629

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Exterior parts | Front cover | G.8.3.1 Front cover (DF-629) |
|  | Rear cover | G.8.3.2 Rear cover (DF-629) |

|  | Paper exit roller solenoid (SD103) | G.8.12.19 Paper exit paddle (FS-533) |
| etc. | Paper exit paddle |  |

### 8.1.7 JS-506

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Exterior parts | Exit tray 1 | G.8.11.1 Exit tray 1 (JS-506) |
|  | Exit tray 2 | G.8.11.2 Exit tray 2 (JS-506) |
| Units | Job separator | G.8.11.3 Job separator (JS-506) |
|  | Sensor unit | G.8.11.4 Sensor unit (JS-506) |
| Boards | JS control board (JSCB) | G.8.11.5 JS control board (JSCB) (JS-506) |
| Motors | Tray shift motor (M1) | G.8.11.6 Tray shift motor (M1) (JS-506) |

### 8.1.8 PK-519

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Punch kit | G.8.13.1 Punch kit (PK-519) |
| Boards | PK control board (PKCB) | G.8.13.2 PK control board (PKCB) (PK-519) |
| Motors | Punch motor (M201) | G.8.13.3 Punch motor (M201) (PK-519) |

### 8.1.9 FS-534/FS-534SD

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Exterior parts | Rear cover | G.8.14.1 Rear cover (FS-534/FS-534SD) |
|  | Front door | G.8.14.2 Front door (FS-534/FS-534SD) |
|  | Front upper cover | G.8.14.3 Front upper cover (FS-534/FS-534SD) |
|  | Left lower cover | G.8.14.4 Left lower cover (FS-534/FS-534SD) |
|  | Front lower cover | G.8.14.5 Front lower cover (FS-534/FS-534SD) |
| Units | Finisher | G.8.14.6 Finisher (FS-534/FS-534SD) |
|  | Horizontal transport unit | G.8.14.7 Relay unit (RU-513) |
|  | Stapler unit | G.8.14.8 Stapler unit (FS-534/FS-534SD) |
|  | Sensor unit | G.8.14.9 Sensor unit (FS-534/FS-534SD) |
|  | Saddle unit | G.8.14.10 Saddle unit (FS-534SD) |
| Boards | FS control board (FSCB) | G.8.14.11 FS control board (FSCB) (FS-534/FS-534SD) |
| Motors | FNS entry transport motor (M2) | G.8.14.12 FNS entry transport motor (M2) (FS-534/ FS-534SD) |
|  | FNS discharge motor (M3) | G.8.14.13 FNS discharge motor (M3) (FS-534/ FS-534SD) |
|  | Receiving roller retraction motor (M4) | G.8.14.14 Receiving roller retraction motor (M4) (FS-534/FS-534SD) |
|  | FNS paddle motor (M5) | G.8.14.15 FNS paddle motor (M5) (FS-534/FS-534SD) |
|  | Trailing edge stopper motor (M6) | G.8.14.16 Trailing edge stopper motor (M6) (FS-534/ FS-534SD) |
|  | Alignment motor/front (M7) | $\begin{aligned} & \text { G.8.14.17 Alignment motor/front (M7) (FS-534/ } \\ & \text { FS-534SD) } \end{aligned}$ |
|  | Alignment motor/rear (M8) | G.8.14.18 Alignment motor/rear (M8) (FS-534/ FS-534SD) |
|  | Pre-eject drive motor (M9) | G.8.14.19 Pre-eject drive motor (M9) (FS-534/ FS-534SD) |
|  | Bundle eject motor (M10) | G.8.14.20 Bundle eject motor (M10) (FS-534/FS-534SD) |
|  | Main tray up/down motor (M11) | G.8.14.21 Main tray up/down motor (M11) (FS-534/ FS-534SD) |

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
|  | Paper receiving control motor (M12) | G.8.14.22 Paper receiving control motor (M12) (FS-534/ FS-534SD) |
|  | Side stapler movement motor (M13) | G.8.14.23 Side stapler movement motor (M13) (FS-534/ FS-534SD) |

### 8.1.10 SD-511

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Exterior parts | Front cover | G.8.15.1 Front cover (SD-511) |
|  | Paper exit tray | G.8.15.2 Paper exit tray (SD-511) |
|  | Staple unit | G.8.15.3 Staple unit (SD-511) |
|  | SD drive board (SDDB) | G.8.15.4 SD drive board (SDDB) (SD-511) |
|  | SD transport motor (M1) | G.8.15.5 SD transport motor (M1) (SD-511) |
|  | Paper discharge control motor (M2) | G.8.15.6 Paper discharge control motor (M2) (SD-511) |
|  | Alignment motor (M3) | G.8.15.7 Alignment motor (M3) (SD-511) |
|  | Stopper drive motor (M4) | G.8.15.8 Stopper drive motor (M4) (SD-511) |
|  | Center fold roller motor (M5) | G.8.15.9 Center fold roller motor (M5) (SD-511) |
|  | Tri-folding guide motor (M6) | G.8.15.10 Tri-folding guide motor (M6) (SD-511) |
|  | SD paddle motor (M7) | G.8.15.11 SD paddle motor (M7) (SD-511) |
|  | Center fold guide motor (M8) | G.8.15.12 Center fold guide motor (M8) (SD-511) |
|  | Center fold knife motor (M9) | G.8.15.13 Center fold knife motor (M9) (SD-511) |
|  | Stopper solenoid (SD1) | Stopper solenoid (SD1) (SD-511) |

### 8.1.11 RU-513

| Section | Part name | Ref. page |
| :---: | :--- | :--- |
| Exterior parts | RU transport motor (M1) | G.8.25.1 RU transport motor (M1) |

8.1.12 PK-520

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Punch kit | G.8.18.1 Punch kit (PK-520) |

8.1.13 SC-508

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Boards | DSC board/1 (for front side) | G.8.27.1 DSC board/1 (for front side) (SC-508) (bizhub <br> C368/C308/C258) |
|  | DSC board/2 (for back side) | G.8.27.2 DSC board/2 (for back side) (SC-508) (bizhub <br> C368/C308/C258) |

### 8.1.14 UK-211

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Upgrade kit | G.8.28.1 Upgrade kit (UK-211) |

### 8.1.15 UK-212

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Upgrade kit | G.8.29.1 Upgrade kit (UK-212) (bizhub C368/C308/ <br> C258) |

### 8.1.16 UK-215

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Upgrade kit | G.8.30.1 Upgrade kit (UK-215) (bizhub C368/C308/ <br> C258) |

### 8.1.17 FK-515

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | FAX board (line 3), FAX board (line 4) | G.8.31.1 FAX board (line 3), FAX board (line 4) <br> (FK-515) |

### 8.1.18 FK-514

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | FAX board (line 1), FAX board (line 2) | G.8.32.1 FAX Kit (Line1), FAX Kit (Line2) (FK-514) |

| Section | Part name | Ref. page |
| :---: | :--- | :--- |
|  |  | G.8.32.2 FAX Kit (Line1), FAX Kit (Line2) (FK-514) (with <br> MK-742) |

### 8.1.19 HD-524

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Hard disk (B) | G.8.33.1 Hard disk (B) (HD-524) (bizhub C368/C308/ <br> C258) |
|  | Hard disk (B) | G.8.33.2 Hard disk (B) (HD-524: Cover type) (bizhub <br> C368/C308/C258) |

### 8.1.20 CU-101

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Exterior parts | Clean unit cover | G.8.34.1 Clean unit cover |
| Units | Clean unit | G.8.34.2 Clean unit (CU-101) |
| Boards | Clean unit drive board (CUDB) | G.8.34.3 Clean unit drive board (CUDB) |
| Fans | Exhaust fan/1 (FM14) | G.8.34.4 Exhaust fan/1 (FM14) |
|  | Exhaust fan/2 (FM15) | G.8.34.5 Exhaust fan/2 (FM15) |
|  | Suction fan (FM16) | G.8.34.6 Suction fan (FM16) |
| etc. | Deodorant filter/UFP filter | G.8.34.7 Deodorant filter/UFP filter |

### 8.1.21 KP-101

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Keypad | G.8.36.1 Keypad (KP-101) |

### 8.1.22 VI-508

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Video Interface Kit | G.8.37.1 Video Interface Kit (VI-508) |

### 8.2 Disassembly/reassembly parts list (bizhub C658/C558/C458)

### 8.2.1 PC-115/PC-215

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Exterior parts | Right door | G.8.6.1 Right door (PC-115/PC-215) |
|  | Rear right cover | G.8.6.2 Rear right cover (PC-115/PC-215) |
|  | Rear cover | G.8.6.3 Rear cover (PC-115/PC-215) |
|  | Tray 3, Tray 4 | G.8.6.4 Tray 3, tray 4 (PC-115/PC-215) |
| Units | Paper feed cabinet | G.8.6.5 Paper feed cabinet (PC-115/PC-215) |
|  | Tray 3 paper feed unit | G.8.6.6 Tray 3 paper feed unit (PC-115/PC-215) |
|  | Tray 4 paper feed unit | G.8.6.7 Tray 4 paper feed unit (PC-215) |
| Boards | PC control board (PCCB) | G.8.6.8 PC control board (PCCB) (PC-115/PC-215) |
|  | Tray 3 paper empty indicator board (PEIB/3) | G.8.6.9 Tray 3 paper empty indicator board (PEIB/3), tray 4 paper empty indicator board (PEIB/4) (PC-115/ PC-215) |
|  | Tray 4 paper empty indicator board (PEIB/4) |  |
|  | Tray 3 FD paper size board (FDPSB/3) | G.8.6.10 Tray 3 FD paper size board (FDPSB/3), tray 4 FD paper size board (FDPSB/4) (PC-115/PC-215) |
|  | Tray 4 FD paper size board (FDPSB/4) |  |
|  | Tray 3 CD paper size board (CDPSB/3) | G.8.6.11 Tray 3 CD paper size board (CDPSB/3) (PC-115/PC-215) |
|  | Tray 4 CD paper size board (CDPSB/4) | G.8.6.12 Tray 4 CD paper size board (CDPSB/4) (PC-215) |
| Motors | Tray 3 paper feed motor (M111) | G.8.6.13 Tray 3 paper feed motor (M111), tray 4 paper feed motor (M121) (PC-115/PC-215) |
|  | Tray 4 paper feed motor (M121) |  |
|  | Tray 3 vertical transport motor (M112) | G.8.6.14 Tray 3 vertical transport motor (M112), tray 4 vertical transport motor (M122) (PC-115/PC-215) |
|  | Tray 4 vertical transport motor (M122) |  |
|  | Tray 3 lift-up motor (M113) | G.8.6.15 Tray 3 lift-up motor (M113), tray 4 lift-up motor (M123) (PC-115/PC-215) |
|  | Tray 4 lift-up motor (M123) |  |

### 8.2.2 PC-415

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Exterior parts | Right door | G.8.8.1 Right door (PC-415) |
|  | Rear right cover | G.8.8.2 Rear right cover (PC-415) |
|  | Rear cover | G.8.8.3 Rear cover (PC-415) |
|  | Paper feed tray | G.8.8.4 Paper feed tray (PC-415) |
| Units | Paper feed cabinet | G.8.8.5 Paper feed cabinet (PC-415) |
|  | Paper feed unit | G.8.8.6 Paper feed unit (PC-415) |
| Boards | PC control board (PCCB) | G.8.8.7 PC control board (PCCB) (PC-415) |
|  | Tray 3 paper empty indicator board (PEIB/3) | G.8.8.8 Tray 3 paper empty indicator board (PEIB/3) (PC-415) |
| Motors | Paper feed motor (M131) | G.8.8.9 Paper feed motor (M131) (PC-415) |
|  | Vertical transport motor (M132) | G.8.8.10 Vertical transport motor (M132) (PC-415) |
|  | Elevator motor (M134) | G.8.8.11 Elevator motor (M134) (PC-415) |
|  | Shifter motor (M133) | G.8.8.12 Shifter motor (M133) (PC-415) |
| etc. | Wire | G.8.8.13 Wire (PC-415) |

### 8.2.3 LU-207

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Exterior parts | Right cover | G.8.9.1 Right cover (LU-207) |
|  | Front cover | G.8.9.2 Front cover (LU-207) |
|  | Rear cover | G.8.9.3 Rear cover (LU-207) |
|  | Feed cover | G.8.9.4 Feed cover (LU-207) |
| Units | Large capacity unit | G.8.9.5 Large capacity unit (LU-207) |
| Boards | LU drive board (LUDB) | G.8.9.6 LU drive board (LUDB) (LU-207) |
| Electrical part | LU lift-up motor (M1) | G.8.9.7 LU lift-up motor (M1) (LU-207) |
|  | LU paper feed motor (M2) | G.8.9.8 LU paper feed motor (M2) (LU-207) |
|  | LU transport motor (M3) | G.8.9.9 LU transport motor (M3) (LU-207) |
|  | Dehumidification heater (DH) | G.8.9.10 Dehumidification heater (DH) (LU-207) |
| Up/down section | Lift wire | G.8.9.11 Lift wire (LU-207) |

### 8.2.4 LU-302

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Exterior parts | Upper door | G.8.10.1 Upper door (LU-302) |
|  | Right cover | G.8.10.2 Right cover (LU-302) |
|  | Front cover | G.8.10.3 Front cover (LU-302) |
|  | Rear cover | G.8.10.4 Rear cover (LU-302) |
|  | Feed cover | G.8.10.5 Feed cover (LU-302) |
| Units | Large capacity unit | G.8.10.6 Large capacity unit (LU-302) |
| Boards | LU drive board (LUDB) | G.8.10.7 LU drive board (LUDB) (LU-302) |
| Motors | LU Lift-up motor (M1) | G.8.10.8 LU lift-up motor (M1) (LU-302) |
| Others | Dehumidification heater (DH) | G.8.10.1 Dehumidification heater (DH) (LU-302) |
| Up/down wire (LU-302) |  |  |

### 8.2.5 JS-506(C558/C458 only)

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Exterior parts | Exit tray 1 | G.8.11.1 Exit tray 1 (JS-506) |
|  | Exit tray 2 | G.8.11.2 Exit tray 2 (JS-506) |
| Units | Job separator | G.8.11.3 Job separator (JS-506) |
|  | Sensor unit | G.8.11.4 Sensor unit (JS-506) |
| Boards | JS control board (JSCB) | G.8.11.5 JS control board (JSCB) (JS-506) |
| Motors | Tray shift motor (M1) | G.8.11.6 Tray shift motor (M1) (JS-506) |

### 8.2.6 FS-533(C558/C458 only)

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Exterior parts | Front cover | G.8.12.1 Front cover (FS-533) |
|  | Upper cover | G.8.12.2 Upper cover (FS-533) |
|  | Rear cover | G.8.12.3 Rear cover (FS-533) |

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Units | Finisher | G.8.12.4 Finisher (FS-533) |
|  | Stapler unit | G.8.12.5 Stapler unit (FS-533) |
|  | Paper exit tray unit | G.8.12.6 Paper exit tray unit (FS-533) |
| Boards | FS control board (FSCB) | G.8.12.7 FS control board (FSCB) (FS-533) |
|  | Stapler relay board (STREYB) | G.8.12.8 Stapler relay board (STREYB) (FS-533) |
| Motors | Paper conveyance motor (M101) | G.8.12.9 Paper conveyance motor (M101) (FS-533) |
|  | Paper exit motor (M102) | G.8.12.10 Paper exit motor (M102) (FS-533) |
|  | Alignment roller motor (M103) | G.8.12.11 Alignment roller motor (M103) (FS-533) |
|  | Exit roller lift up motor (M104) | G.8.12.12 Exit roller lift up motor (M104) (FS-533) |
|  | Alignment motor/F (M105) | G.8.12.13 Alignment motor/F (M105), Alignment motor/ |
|  | Alignment motor/R (M106) | R (M106) (FS-533) |
|  | Stapler movement motor (M107) | G.8.12.14 Stapler movement motor (M107) (FS-533) |
|  | Tray lift up motor (M109) | G.8.12.15 Tray lift up motor (M109) (FS-533) |
|  | Paper surface detect solenoid (SD101) | G.8.12.16 Paper surface detect solenoid (SD101) (FS-533) |
|  | Batch solenoid (SD102) | G.8.12.17 Batch solenoid (SD102) (FS-533) |
|  | Paper exit roller solenoid (SD103) | G.8.12.18 Paper exit roller solenoid (SD103) (FS-533) |
| etc. | Paper exit paddle | G.8.12.19 Paper exit paddle (FS-533) |

### 8.2.7 PK-519(C558/C458 only)

| Section | Part name | Ref. page |
| :--- | :--- | :--- |
| Units | Punch kit | G.8.13.1 Punch kit (PK-519) |
| Boards | PK control board (PKCB) | G.8.13.2 PK control board (PKCB) (PK-519) |
| Motors | Punch motor (M201) | G.8.13.3 Punch motor (M201) (PK-519) |

### 8.2.8 FS-536/FS-536SD

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Exterior parts | Rear cover | G.8.16.1 Rear cover (FS-536/FS-536SD) |
|  | Front door | G.8.16.2 Front door (FS-536/FS-536SD) |
|  | Front upper cover | G.8.16.3 Front upper cover (FS-536/FS-536SD) |
|  | Left lower cover | G.8.16.4 Left lower cover (FS-536/FS-536SD) |
|  | Front lower cover | G.8.16.5 Front lower cover (FS-536/FS-536SD) |
| Units | Finisher | G.8.16.6 Finisher (FS-536/FS-536SD) |
|  | Relay unit | G.8.16.7 Relay unit (FS-536/FS-536SD) |
|  | Sensor unit | G.8.16.8 Sensor unit (FS-536/FS-536SD) |
|  | Stapler unit | G.8.16.9 Stapler unit (FS-536/FS-536SD) |
| Boards | FS control board (FSCB) | G.8.16.10 FS control board (FSCB) (FS-536/FS-536SD) |
| Motors | FNS entry transport motor (M2) | G.8.16.11 FNS entry transport motor (M2) (FS-536/ FS-536SD) |
|  | FNS discharge motor (M3) | G.8.16.12 FNS discharge motor (M3) (FS-536/ FS-536SD) |
|  | Receiving roller retraction motor (M4) | G.8.16.13 Receiving roller retraction motor (M4) (FS-536/FS-536SD) |
|  | FNS paddle motor (M5) | G.8.16.14 FNS paddle motor (M5) (FS-536/FS-536SD) |
|  | Trailing edge stopper motor (M6) | G.8.16.15 Trailing edge stopper motor (M6) (FS-536/ FS-536SD) |
|  | Alignment motor/front (M7) | G.8.16.16 Alignment motor/front (M7) (FS-536/ FS-536SD) |
|  | Alignment motor/rear (M8) | G.8.16.17 Alignment motor/rear (M8) (FS-536/ FS-536SD) |
|  | Pre-eject drive motor (M9) | G.8.16.18 Pre-eject drive motor (M9) (FS-536/ FS-536SD) |
|  | Bundle eject motor (M10) | G.8.16.19 Bundle eject motor (M10) (FS-536/FS-536SD) |
|  | Main tray up/down motor (M11) | G.8.16.20 Main tray up/down motor (M11) (FS-536/ FS-536SD) |
|  | Paper receiving control motor (M12) | G.8.16.21 Paper receiving control motor (M12) (FS-536/ FS-536SD) |
|  | Side stapler movement motor (M13) | G.8.16.22 Side stapler movement motor (M13) (FS-536/ FS-536SD) |

### 8.2.9 FS-536SD saddle section

| Section | Part name | Ref. page |
| :---: | :---: | :---: |
| Exterior parts | Front cover | G.8.17.1 Front cover (FS-536SD saddle section) |
| Units | Saddle unit | G.8.17.2 Saddle unit (FS-536SD) |
|  | Exit tray | G.8.17.3 Exit tray (FS-536SD saddle section) |
|  | Staple unit | G.8.17.4 Staple unit (FS-536SD saddle section) |
| Boards | SD control board (SDCB) | G.8.17.5 SD control board (SDCB) (FS-536SD saddle section) |
| Electrical parts | SD transport motor (M1) | G.8.17.6 SD transport motor (M1) (FS-536SD saddle section) |
|  | Paper discharge control motor (M2) | G.8.17.7 Paper discharge control motor (M2) (FS-536SD saddle section) |
|  | Alignment motor (M3) | G.8.17.8 Alignment motor (M3) (FS-536SD saddle section) |
|  | Stopper drive motor (M4) | G.8.17.9 Stopper drive motor (M4) (FS-536SD saddle section) |
|  | Center fold roller motor (M5) | G.8.17.10 Center fold roller motor (M5) (FS-536SD saddle section) |
|  | Center fold guide motor (M6) | G.8.17.11 Center fold guide motor (M6) (FS-536SD saddle section) |
|  | SD paddle motor (M7) | G.8.17.12 SD paddle motor (M7) (FS-536SD saddle section) |
|  | Tri-folding guide motor (M8) | G.8.17.13 Tri-folding guide motor (M8) (FS-536SD saddle section) |

### 8.3 Disassembly/reassembly procedure (DF-629/SP-501)

### 8.3.1 Front cover (DF-629)

1. Open the reverse automatic document feeder.
[2]

2. To reinstall, reverse the order of removal.

### 8.3.2 Rear cover (DF-629)

1. Open the reverse automatic document feeder.

[1]
2. Remove two screws [1] and remove the front cover [2].
3. Remove four screws [1].

NOTE

- If the reverse automatic document feeder is set to be lifted up at angles up to 60 degrees due to the set position of the stopper for the hinge, change the set position to the lower side so that the reverse automatic document feeder can be opened completely.

## [1]

## [1]

5. To reinstall, reverse the order of removal.

### 8.3.3 Left cover unit (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)

[2]
2. Open the left cover [1].
3. Remove the rear cover [1].

NOTE

- For mounting the rear cover, mount it so that the protrusion [2] of the document feed tray will fit to the groove [3] on the rear cover.

2. Remove the screw [1], and remove the ground earth [2] from the harness guide.
3. Disconnect the connector [1], and remove the harness from the harness guide [2].

[^26][2]

6. To reinstall, reverse the order of removal.

### 8.3.4 Reverse automatic document feeder (DF-629)

[1]

2. Remove the screws [1], and remove the DF cable cover [2] from the back of the main body.
3. Remove the cable tie [1], and disconnect two connectors [2].

[1]

1. Remove two hinge covers [1].
2. Remove the left cover unit [2] as shown in the illustration while pressing the harness into the hole [1] shown in the illustration.
3. Open the reverse automatic document feeder [1].

## NOTE

- If the reverse automatic document feeder is set to be lifted up at angles up to 60 degrees due to the set position of the stopper for the hinge, change the set position to the lower side so that the reverse automatic document feeder can be opened completely.

5. Remove two screws [2].
6. Remove the reverse automatic document feeder [1].

7. NOTE

- When carrying the reverse automatic document feeder, be sure to hold onto the specified positions. The feeder main body can be distorted if held at inappropriate positions.
- After removing the reverse automatic document feeder from the machine, place it on the floor or the like as shown in the illustration.

8. To reinstall, reverse the order of removal.

### 8.3.5 Glass cleaning roller unit (DF-629)

1. Remove the front cover.
G.8.3.1 Front cover (DF-629)
2. Remove the reverse automatic document feeder. G.8.3.4 Reverse automatic document feeder (DF-629)

3. Place the reverse automatic document feeder vertically as shown in the illustration.

[^27]
5. Remove the C-clip [1], and shift the bushing [2], and remove the belt [3].
6. Remove the glass cleaning roller unit [4].

7. NOTE

- When installing the glass cleaning roller unit [2], make sure that the transparent sheets [1] are outside of the glass cleaning roller unit [2].

[1]

8. To reinstall, reverse the order of removal. NOTE

- When installing the glass cleaning roller unit, the following adjustment is necessary.

- Adjust the actuator [1] so that it is positioned where it blocks the light of the document reading glass cleaning sensor [2], and install the belt.
- After completing the above adjustment, when you turn ON the main power switch, make sure that the shaft [1] is at the correct position (home position).

### 8.3.6 DF control board (DFCB) (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)

2. To reinstall, reverse the order of removal.

NOTE

- Be sure to perform the following steps after the DF control board has been replaced with a new one.
- Install the firmware.
- Execute [Service Mode] -> [ADF] -> [Original Tray Width]. I.5.21.6 Original Tray Width
- Execute [Service Mode] -> [ADF] -> [Mixed original Size adjustment]. I.5.21.10 Mixed original size adjustment

### 8.3.7 Document width size sensor (VR1) (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)
2. Lift up the document feed tray [1].

[1]

[2]
[2] [3]

<OK>
<NG>

3. Remove the lever for document exit [1].
4. Remove six screws [2] and remove the cover [3].
5. Remove two screws [1] and disconnect the connector [2], and remove the document width size sensor [3].
6. NOTE

- For mounting the document width size sensor, widen the side edge stop [4] of the document feed tray fully and make sure that the round hole [5] of the gear is at the position as shown on the illustration.

## 7. NOTE

- For mounting the document width size sensor, mount it in the direction shown on the illustration.

8. To reinstall, reverse the order of removal.

## NOTE

- Be sure to perform the following operation when the document width size sensor is replaced.
- Execute [Service Mode] -> [ADF] -> [Original Tray Width]. I.5.21.6 Original Tray Width
- Turn OFF the main power switch and turn it ON again and check whether size detection operates normally.

### 8.3.8 Document reading motor (M1) (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)
2. Remove the reading roller release motor. G.8.3.12 Reading roll release motor (M5) (DF-629)

[3]
[1]
[1] [2]

[1]

[1]
3. To reinstall, reverse the order of removal.

### 8.3.9 Document feed motor (M2) (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)

[^28]
5. To reinstall, reverse the order of removal.

### 8.3.10 Registration motor (M3) (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)
2. Remove the document feed motor. G.8.3.9 Document feed motor (M2) (DF-629)

[2] [1]

[1]
3. To reinstall, reverse the order of removal.

### 8.3.11 Glass cleaning motor (M4) (DF-629)

1. Remove the front cover. G.8.3.1 Front cover (DF-629)
2. Disconnect the connector [1]
3. Remove two screws [2], and remove the document feed motor [3].
4. Disconnect the connector [1]
5. Remove the spring [2].
6. Remove three screws [1], and remove the registration motor assy [2].
7. Remove two screws [1], and remove the registration motor [2].

8. To reinstall, reverse the order of removal.

### 8.3.12 Reading roll release motor (M5) (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)
[1]

[2]
[2] [1]

## [3]

7. To reinstall, reverse the order of removal.

### 8.3.13 DF cooling fan motor (FM1) (DF-629)

1. Remove the rear cover. G.8.3.2 Rear cover (DF-629)
2. Disconnect the connector [1]
3. Remove two screws [2], and remove the glass cleaning motor [3].
4. Disconnect the connector (J18) [1] on the DF control board.
5. Remove five wire saddles [1] and remove the harness from the harness guide [2].
6. Remove three screws [1], and remove the drive assy [2].
7. Disconnect the connector [1]
8. Remove two screws [2], and remove the reading roll release motor [3].
9. To reinstall, reverse the order of removal.

### 8.3.14 Document exit roller release solenoid (SD1) (DF-629)

1. Remove the rear cover.
G.8.3.2 Rear cover (DF-629)
2. Lift up the document feed tray [1].

[1]

[1]
[1]

[2]
[1]
<OK>
<NG>

[1]
3. Disconnect the hookup connector [1].
4. Remove the screw [2], and remove the plate [3].
5. Remove two screws [1], and remove the document exit roller release solenoid [2].
NOTE

- Mark the screw installing location so that the document exit roller release solenoid can be mounted on its original location.

6. NOTE

- When mounting it, set the harness through the hole [1] shown on the illustration.

8. To reinstall, reverse the order of removal.

### 8.3.15 Stamp unit (SP-501)

7. To reinstall, reverse the order of removal.

- Insert the core at the bottom [1] so that the parts shown as [2] on the illustration will be properly set before mounting the document exit roller release solenoid.

1. Open the left cover [1].
2. Lift up the guide plate DF1 [1].
3. Remove the screw [2], and remove the cover [3].
4. Remove the screw [1], and remove the ground terminal [2].
5. Disconnect the connector [3]
6. Remove the stamp unit [4].

NOTE

- Ensure that the ground terminal is on the upper side of the mounting bracket of stamp unit.
- Route the harness as shown in the illustration to place its connector under the guide plate.

### 8.3.16 Stamp (SP-501)

1. Open the left cover [1].

2. Lift up the guide plate DF1 [1].
3. Remove the screw [2], and remove the cover [3].
4. Remove the used stamp, and install the new stamp of replacement [1]. NOTE

- Align the round pin of the stamp with the slit in the stamp unit side.

5. To reinstall, reverse the order of removal.

### 8.4 Disassembly/reassembly procedure (DF-704/SP-501)

### 8.4.1 Front cover (DF-704)

1. Open the dual scan document feeder.
[2]

2. To reinstall, reverse the order of removal.

### 8.4.2 Rear cover (DF-704)

1. Open the dual scan document feeder.

2. To reinstall, reverse the order of removal.

### 8.4.3 Left cover unit (DF-704)

1. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)
[2]

[1]

[2]
2. Remove three screws [1].
3. While peeling off the mat, remove the screw [2].

NOTE

- If the reverse automatic document feeder is set to be lifted up at angles up to 60 degrees due to the set position of the stopper for the hinge, change the set position to the lower side so that the reverse automatic document feeder can be opened completely.

4. Open the left cover [1].
5. Remove the rear cover [1].

NOTE

- For mounting the rear cover, mount it so that the protrusion [2] of the document feed tray will fit to the groove [3] on the rear cover.

2. Remove the screw [1], and remove the ground earth [2] from the harness guide.
3. Disconnect the connector [1], and remove the harness from the harness guide [2].
[1]

[2]

4. To reinstall, reverse the order of removal.

### 8.4.4 Dual scan document feeder (DF-704)

5. Remove the screw [1].
6. Remove the left cover unit [3] as shown in the illustration while pressing the harness into the hole [2] shown in the illustration.

1. Remove two hinge covers [1].

NOTE

- If the cord clamp [2] is installed, remove the screw [3], and remove the cord clamp [2].

2. Remove the screw [1], and remove the DF cable cover [2] from the back of the main body.
3. Remove seven caps [1].

[2]

[2]

[1]
[2]
[1]

4. Remove 11 screws [1], and remove the lower rear cover [2] from the back of the main body.
5. Remove the cable from the wire saddle [1], and disconnect the connector [2].
6. Remove the cable tie [1], and disconnect three connectors [2].
7. Open the dual scan document feeder [1].

## NOTE

- If the reverse automatic document feeder is set to be lifted up at angles up to 60 degrees due to the set position of the stopper for the hinge, change the set position to the lower side so that the reverse automatic document feeder can be opened completely.

8. Remove two screws [2].
9. Remove the dual scan document feeder [1].

10. NOTE

- When carrying the dual scan document feeder, be sure to hold onto the specified positions. The feeder main body can be distorted if held at inappropriate positions.
- After removing the dual scan document feeder from the machine, place it on the floor or the like as shown in the illustration.

11. To reinstall, reverse the order of removal.

### 8.4.5 Front side glass cleaning roller unit (DF-704)

1. Remove the front cover.
G.8.4.1 Front cover (DF-704)
2. Remove the dual scan document feeder G.8.4.4 Dual scan document feeder (DF-704)
3. Place the dual scan document feeder vertically as shown in the illustration.

[^29]
5. Remove the C-clip [1], and shift the bushing [2], and remove the belt [3].
6. Remove the front side glass cleaning roller unit [4].

7. NOTE

- When installing the glass cleaning roller unit [2], make sure that the transparent sheets [1] are outside of the glass cleaning roller unit [2].

8. To reinstall, reverse the order of removal. NOTE

- When installing the front side glass cleaning roller unit, the following adjustment is necessary.
- Adjust the actuator [1] so that it is positioned where it blocks the light of the document reading glass cleaning sensor [2], and install the belt.

- After completing the above adjustment, when you turn ON the main power switch, make sure that the shaft [1] is at the correct position (home
 position).

### 8.4.6 Back side glass cleaning roller unit (DF-704)

1. Open the dual scan document feeder.
2. Open the opening and closing guide [1].

[1]

[3]

[2]
[1]
[1]
[2]

[3]
[5]

3. To reinstall, reverse the order of removal.
4. While peeling off the mat, remove the screw [1], and while opening the opening and closing guide, remove the cover [2].
5. Remove the screw [1] and E-ring [2], and remove the bushing [3].
6. NOTE

- When installing the bushing [3], place the dowel [1] in the middle of the slot [2].

6. Remove the E-ring [1].
7. Remove the gear [2], and remove the belt [3].
8. Remove the bushing [4].
9. Remove the back side glass cleaning roller unit [5].

## NOTE

- When installing the back side glass cleaning roller unit, the following adjustment is necessary.
- Align the D cut surface [2] of the shaft with the lines [1] marked on the bushing.

[2]
[1]
- When installing the belt, align the line [1] on the pulley and the line [2] on the transport guide.

### 8.4.7 CIS module (CIS) (DF-704)

1. Remove the front cover. G.8.4.1 Front cover (DF-704)
2. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)
[1]

3. Lift up the document feed tray [1].
4. Remove the claw [2] at the front side, and set the document feed tray [1] off the working area.
5. Remove 10 screws [1], and remove the transport guide [2]. NOTE

- Use care when mounting the screw [1] in the dashed circle (one on the left when looking from the front) since it is different from other nine screws [1].

## [1]

[2]
[1]

[1]

[1]

[2]
11. To reinstall, reverse the order of removal. NOTE

- Be sure to perform the following steps after the CIS module has been replaced with a new one.
- Adjust the back side skew feed on the ADF.
I.15.1.3 Adjusting back side skew feed on ADF
- Execute [Service Mode] -> [System 2] -> [CCD Calibration].
I.5.16.7 CCD Calibration
- Execute [Service Mode] -> [System 2] -> [Line Mag Setting].
I.5.16.11 Line Mag Setting
- Execute [Service Mode] -> [ADF] -> [Auto Stop Position Adjustment] -> [Sub Scanning Direction 2-Side].
I.5.21.3 (2) (b) Sub Scanning Direction 2-Side
- Execute [Service Mode] -> [ADF] -> [Auto Stop Position Adjustment] -> [Main Scanning (Back)].
I.5.21.3 (2) (d) Main Scanning (Back)
- Execute [Service Mode] -> [ADF] -> [FD-Mag. Adj. (B)]. I.5.21.12 FD-Mag. Adj. (B)
- Execute [Service Mode] -> [ADF] -> [Main Scanning Direction Zoom]. I.5.21.13 Main Scanning Direction Zoom

### 8.4.8 DF control board (DFCB) (DF-704)

1. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)

2. Disconnect all 17 connectors from the DF control board
3. Remove four screws [1], and remove the DF control board [2].

4. NOTE

- For mounting the document width size sensor, mount it in the direction shown on the illustration.

7. To reinstall, reverse the order of removal.

NOTE

- Be sure to perform the following operation when the document width size sensor is replaced.
- Execute [Service Mode] -> [ADF] -> [Original Tray Width].
I.5.21.6 Original Tray Width
- Turn OFF the main power switch and turn it ON again and check whether size detection operates normally.

### 8.4.10 CIS power supply (CISPU) (DF-704)

1. Remove the front cover.
G.8.4.1 Front cover (DF-704)
2. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)

3. Lift up the document feed tray [1].
4. Remove the claw [2] at the front side, and set the document feed tray [1] off the working area.

5. Remove 10 screws [1], and remove the transport guide [2].

## NOTE

- Use care when mounting the screw [1] in the dashed circle (one on the left when looking from the front) since it is different from other nine screws [1].

6. Disconnect two connectors [1].
7. Remove two screws [2], and remove the CIS power supply [3].

[2]
8. To reinstall, reverse the order of removal.

### 8.4.11 dual scan image processing board (DSIPB) (DF-704)

1. Remove the lower rear cover of the main body.
2. Remove the DSC board 2 (for back side). (Option)
[1]

3. Disconnect the connector [1]
4. Remove two screws [2], and remove the dual scan image processing board [3]
5. To reinstall, reverse the order of removal.

### 8.4.12 Document reading motor (M1) (DF-704)

## (1) Remove procedure

1. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)
2. Remove the reading roller release motor.
G.8.4.15 Reading roller release motor (M4) (DF-704)

[2]
[1] [2]

[1]
3. Remove the screw [2].
4. Remove three screws [1], and remove the document reading motor assy [2].
5. Remove two screws [1], and remove the document reading motor [2].
(2) Reinstall procedure

6. Install the document reading motor assy with four screws.
7. Loosen the screw [1] and apply tension to the belt.
8. Tighten the screw [1].

9. To reinstall, reverse the order of removal.

### 8.4.13 Document feed motor (M2) (DF-704)

1. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)

2. Disconnect the connector [1]
3. Remove the screw [2], and remove the earth plate [3].
4. Remove the screw [4].
5. Remove three screws [1], and remove the document feed motor assy [2].
6. Remove two screws [1] and belt [2], and remove the document feed motor [2].
[1] [3]

7. To reinstall, reverse the order of removal.

### 8.4.14 Registration motor (M3) (DF-704)

1. Remove the rear cover.

## G.8.4.2 Rear cover (DF-704)

2. Remove the reading roller release motor.
G.8.4.15 Reading roller release motor (M4) (DF-704)
3. Remove the document reading motor.
G.8.4.12 Document reading motor (M1) (DF-704)

4. To reinstall, reverse the order of removal.

### 8.4.15 Reading roller release motor (M4) (DF-704)

1. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)

## [1]

2. Disconnect the connector (J18) [1] on the DF control board.
3. Remove six wire saddles [1] and remove the harness from the harness guide [2].

4. Remove two screws [1] and a claw [2], and move the harness guide [3] off the working area.
5. Remove the screw [1].
6. Remove two screws [1].
7. Disconnect the connector [1], and remove the reading roller release motor assy [2].
8. Remove the harness from the harness guide [3].

[^30][1]

10. To reinstall, reverse the order of removal.

### 8.4.16 CIS cleaning motor (M5) (DF-704)

1. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)

2. Disconnect the connector [1]
3. Remove two screws [2], and remove the CIS cleaning motor [3]. NOTE

- When mounting it, make sure to set the belt [5] to the gear [4] on the pulley firmly.

4. To reinstall, reverse the order of removal.

### 8.4.17 Document reading glass cleaning motor (M6) (DF-704)

1. Remove the front cover.
G.8.4.1 Front cover (DF-704)

2. To reinstall, reverse the order of removal.

### 8.4.18 DF cooling fan motor (FM1) (DF-704)

1. Remove the rear cover.
G.8.4.2 Rear cover (DF-704)

2. To reinstall, reverse the order of removal.

### 8.4.19 CIS cable (DF-704)

1. Remove the front cover. G.8.4.1 Front cover (DF-704)
2. Remove the rear cover. G.8.4.2 Rear cover (DF-704)
3. Remove the reading roller release motor. G.8.4.15 Reading roller release motor (M4) (DF-704)
4. Remove the CIS cleaning motor. G.8.4.16 CIS cleaning motor (M5) (DF-704)
5. Remove the CIS module.
G.8.4.7 CIS module (CIS) (DF-704)
6. Disconnect the connector [1].
7. Remove two screws [2], and remove the document reading glass cleaning motor [3].
8. Disconnect the connector [1].
9. Remove the DF cooling fan motor [2].

10. Remove one screw [1]. Then, remove the wire saddle [2] from the CIS cable.
11. Remove the CIS cable.

NOTE

- If the CIS cable is to be replaced with a new one, remove the two wire saddles [1] that are attached to the old CIS cable and attach them to the new cable.
- Attach the wire saddles at the same positions as those at which they were attached.

8. To reinstall, reverse the order of removal.

### 8.4.20 Stamp unit (SP-501)

1. Peel off the mat (at two places on the left) [1].
2. Remove the two screws [1], and remove the cover [2].
3. Remove the screw [1].
4. Remove the harness and disconnect the connector [2].

5. To reinstall, reverse the order of removal.

### 8.4.21 Stamp (SP-501)

1. Peel off the mat (at two places on the left) [1].
2. Remove the two screws [1], and remove the cover [2].
3. Remove the screw [1].
4. Remove the harness and disconnect the connector [2].

[1]

5. Remove the screw [1], and remove the guide plate [2]. NOTE

- When mounting it, set the ground terminal through the hole [3] shown on the illustration.

6. Remove the used stamp, and install the new stamp of replacement [1]. NOTE

- Align the round pin of the stamp with the slit in the stamp unit side.

7. To reinstall, reverse the order of removal.

### 8.5 Disassembly/reassembly procedure (PC-110/PC-210)

### 8.5.1 Right door (PC-110/PC-210)

1. Open the right door.

2. Remove the screw [1], and remove the right door [2].
3. Remove two screws [1], and remove the rear right cover [2].
[2]

[1]
4. To reinstall, reverse the order of removal.

### 8.5.3 Rear cover (PC-110/PC-210)

2. To reinstall, reverse the order of removal.

### 8.5.4 Tray 3, tray 4 (PC-110/PC-210)

## NOTE

- The tray 3 and the tray 4 are of the same form and mechanism. This procedure shows the steps taken for the tray 3.

1. Slide out the tray 3 , and remove the paper.
2. Remove five screws [1], and remove the rear cover [2].

3. Remove the screw [1], and remove the stopper [2].
4. Hold up the tray 3 to remove it.

5. To reinstall, reverse the order of removal.
8.5.5 Paper feed cabinet (PC-110/PC-210)

## $\triangle$ CAUTION

## - When holding the transportation handles, be careful not to catch your fingers in the main body.

1. Slide out the tray 2 and tray 3.

2. Slide the tray 2 and tray 3 back in.
[2]

[1]
[2]

[1]

[1]
3. Pull out the transportation handles.
4. Remove the screw [1], and remove the fixing bracket [2].
5. Remove two screws [1], and remove the fixing bracket [2].
6. Remove two screws [1], and remove two fixing brackets [2].
7. Remove the screw [1], and remove the rear under cover [2].
8. Remove the harness from the wire saddle [1].
9. Disconnect two connectors [2].

### 8.5.6 Tray 3 paper feed unit (PC-110/PC-210)

1. Remove the right door.
G.8.5.1 Right door (PC-110/PC-210)
2. Remove the rear right cover.
G.8.5.2 Rear right cover (PC-110/PC-210)
3. Slide out the tray 3.

[2] [1]

[1]
4. To reinstall, reverse the order of removal.

### 8.5.7 Tray 4 paper feed unit (PC-210)

1. Remove the right door.
G.8.5.1 Right door (PC-110/PC-210)
2. Remove the rear right cover.
G.8.5.2 Rear right cover (PC-110/PC-210)
3. Slide out the tray 4.

4. Hold the transportation handles at the right and left of the main body, and lift the main body [1] and then remove the paper feed cabinet [2].
NOTE

- When transporting or moving the main body, assign adequate number of persons.

4. Remove three tabs [1], and remove the harness cover [2]
5. Remove the harness from two wire saddles [3].
6. Disconnect two connectors [4].
7. Remove three screws [1], and remove the tray 3 paper feed unit [2].
8. Remove three tabs [1], and remove the harness cover [2].
9. Remove the harness from the wire saddle [3].
10. Disconnect two connectors [4].

11. To reinstall, reverse the order of removal.

### 8.5.8 PC control board (PCCB) (PC-110/PC-210)

1. Remove the rear cover.
G.8.5.3 Rear cover (PC-110/PC-210)

2. To reinstall, reverse the order of removal.
8.5.9 Tray 3 paper empty indicator board (PEIB/3), tray 4 paper empty indicator board (PEIB/4) (PC-110/PC-210) NOTE

- The tray 3 paper empty indicator board and the tray 4 paper empty indicator board are of the same form and mechanism. This procedure shows the steps taken for the tray 3 paper empty indicator board.

1. Slide out the tray 3.
2. Slide out the tray 4.

3. Remove four screws [1], and remove the right front cover [2].
4. Disconnect all connectors on the PC control board.
5. Remove four screws [1], and remove the PC control board [2].
[2] [3]

[1]
6. Disconnect the connector [1].
7. Remove the screw [2], and remove the tray 3 paper empty indicator board [3]
8. To reinstall, reverse the order of removal.

### 8.5.10 Tray 3 FD paper size board (FDPSB/3), tray 4 FD paper size board (FDPSB/4) (PC-110/PC-210)

 NOTE- The tray 3 FD paper size board and the tray 4 FD paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 3 FD paper size board.

1. Remove the tray 3.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)
2. Remove the tray 4 . G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)

3. To reinstall, reverse the order of removal.

### 8.5.11 Tray 3CD paper size board (CDPSB/3) (PC-110/PC-210)

1. Remove the rear cover.
G.8.5.3 Rear cover (PC-110/PC-210)

2. Disconnect the connector [1] on the PC control board.
3. Remove the tray 3.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)
4. Remove the tray 4.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)

5. Remove three screws [1], and remove the tray 3 lift-up motor assy [2].
6. Disconnect the connector [1].
7. Remove the screw [2], and remove the tray 3 CD paper size board [3].
8. To reinstall, reverse the order of removal.

### 8.5.12 Tray 4 CD paper size board (CDPSB/4) (PC-210)

1. Remove the rear cover.
G.8.5.3 Rear cover (PC-110/PC-210)

## [1]

2. Disconnect the connector [1] on the PC control board.
4. Remove three screws [1], and remove the tray 4 lift-up motor assy [2].
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)

[1]
[1] [2]

5. Disconnect the connector [1].
6. Remove the screw [2], and remove the tray 4 CD paper size board [3].
3. Remove the tray 3 and tray 4.
7. To reinstall, reverse the order of removal.
8.5.13 Tray 3 paper feed motor (M111), tray 4 paper feed motor (M121) (PC-110/PC-210)

## NOTE

- The tray 3 paper feed motor and the tray 4 paper feed motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 paper feed motor.

1. Remove the rear cover.
G.8.5.3 Rear cover (PC-110/PC-210)

2. Remove three screws [1].
3. Disconnect the connector [2], and remove the tray 3 paper feed motor assy [3]. NOTE

- When mounting the tray 3 paper feed motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the tray 3 paper feed motor [2].

5. To reinstall, reverse the order of removal.
8.5.14 Tray 3 vertical transport motor (M112), tray 4 vertical transport motor (M122) (PC-110/PC-210)

## NOTE

- The tray 3 vertical transport motor and the tray 4 vertical transport motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 vertical transport motor.

1. Remove the rear cover.
G.8.5.3 Rear cover (PC-110/PC-210)
[2] [1] [3]

[1]
2. Remove three screws [1].
3. Disconnect the connector [2], and remove the tray 3 vertical transport motor assy [3].
NOTE

- When mounting the tray 3 vertical transport motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the tray 3 vertical transport motor [2].
5. To reinstall, reverse the order of removal.
8.5.15 Tray 3 lift-up motor (M113), tray 4 lift-up motor (M123) (PC-110/PC-210)

## NOTE

- The tray 3 lift-up motor and the tray 4 lift-up motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 lift-up motor.

1. Remove the rear cover.
G.8.5.3 Rear cover (PC-110/PC-210)

2. To reinstall, reverse the order of removal.
8.6 Disassembly/reassembly procedure (PC-115/PC-215)

### 8.6.1 Right door (PC-115/PC-215)

1. Open the right door.
2. Disconnect the connector [1].
3. Remove three screws [2], and remove the tray 3 lift-up motor [3].

4. To reinstall, reverse the order of removal.

### 8.6.2 Rear right cover (PC-115/PC-215)

[2]

[1]
2. To reinstall, reverse the order of removal.

### 8.6.3 Rear cover (PC-115/PC-215)

2. To reinstall, reverse the order of removal.
8.6.4 Tray 3, tray 4 (PC-115/PC-215)

NOTE

- The tray 3 and the tray 4 are of the same form and mechanism. This procedure shows the steps taken for the tray 3.

1. Slide out the tray 3 , and remove the paper.
2. Shift the stopper [1] to the left.

[1]
3. Hold up the tray 3 to remove it.

4. To reinstall, reverse the order of removal.

## $\triangle$ CAUTION

- When holding the transportation handles, be careful not to catch your fingers in the main body.

1. Slide out the tray 2 and tray 3.
2. Remove the screw [1], and remove the fixing bracket [2].

[1]
3. Remove two screws [1], and remove the fixing bracket [2].

[1] [2]
4. Slide the tray 2 and tray 3 back in.

5. Remove two screws [1], and remove two fixing brackets [2].

6. Pull out the transportation handles.

[2]

### 8.6.6 Tray 3 paper feed unit (PC-115/PC-215)

1. Remove the right door.
G.8.6.1 Right door (PC-115/PC-215)
2. Remove the rear right cover.
G.8.6.2 Rear right cover (PC-115/PC-215)
3. Slide out the tray 3.

[2]

[1]
4. To reinstall, reverse the order of removal.
5. Remove the screw [1], and remove the rear under cover [2].
6. Disconnect two connectors [1].
7. Hold the transportation handles at the right and left of the main body, and lift the main body [1] and then remove the paper feed cabinet [2].
NOTE

- When transporting or moving the main body, assign adequate number of persons.

4. Remove three tabs [1], and remove the harness cover [2].
5. Remove the harness from two wire saddles [3].
6. Disconnect two connectors [4].
7. Remove three screws [1], and remove the tray 3 paper feed unit [2].

### 8.6.7 Tray 4 paper feed unit (PC-215)

1. Remove the right door.
G.8.6.1 Right door (PC-115/PC-215)
2. Remove the rear right cover.
G.8.6.2 Rear right cover (PC-115/PC-215)
3. Slide out the tray 4.

4. Remove three tabs [1], and remove the harness cover [2].
5. Remove the harness from the wire saddle [3].
6. Disconnect two connectors [4].
7. Remove two screws [1], and remove the cover [2].
8. Remove four screws [1], and remove the tray 4 paper feed unit [2].

[1]
9. To reinstall, reverse the order of removal.

### 8.6.8 PC control board (PCCB) (PC-115/PC-215)

1. Remove the rear cover.
G.8.6.3 Rear cover (PC-115/PC-215)

2. To reinstall, reverse the order of removal.

### 8.6.9 Tray 3 paper empty indicator board (PEIB/3), tray 4 paper empty indicator board (PEIB/4) (PC-115/PC-215)

## NOTE

- The tray 3 paper empty indicator board and the tray 4 paper empty indicator board are of the same form and mechanism. This procedure shows the steps taken for the tray 3 paper empty indicator board.

1. Slide out the tray 3.
2. Slide out the tray 4.

3. To reinstall, reverse the order of removal.

### 8.6.10 Tray 3 FD paper size board (FDPSB/3), tray 4 FD paper size board (FDPSB/4) (PC-115/PC-215)

## NOTE

- The tray 3 FD paper size board and the tray 4 FD paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 3 FD paper size board.

1. Remove the tray 3.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)
2. Remove the tray 4.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)
[3] [2] [4]

[3] [1]

3. Disconnect the connector [1].
4. Remove the screw [2] and three tabs [3], and remove the tray 3 FD paper size board assy [4].
5. Remove the screw [1] and the tab [2], and remove the tray 3 FD paper size board [3].
6. To reinstall, reverse the order of removal.

### 8.6.11 Tray 3 CD paper size board (CDPSB/3) (PC-115/PC-215)

1. Remove the rear cover.
G.8.6.3 Rear cover (PC-115/PC-215)

2. Disconnect the connector [1] on the PC control board.
3. Remove the tray 3.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)
4. Remove the tray 4.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)

[1]
[3]

[1] [2]
[2] [1]

[3]
5. Disconnect the connector [1]
6. Remove the screw [2], and remove the tray 3 CD paper size board [3].
7. To reinstall, reverse the order of removal.

### 8.6.12 Tray 4 CD paper size board (CDPSB/4) (PC-215)

1. Remove the rear cover.
G.8.6.3 Rear cover (PC-115/PC-215)
[1]

2. Disconnect the connector [1] on the PC control board.
3. Remove the tray 3 and tray 4.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)

4. To reinstall, reverse the order of removal.
8.6.13 Tray 3 paper feed motor (M111), tray 4 paper feed motor (M121) (PC-115/PC-215)

## NOTE

- The tray 3 paper feed motor and the tray 4 paper feed motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 paper feed motor.

1. Remove the rear cover.
G.8.6.3 Rear cover (PC-115/PC-215)

2. Remove three screws [1].
3. Disconnect the connector [2], and remove the tray 3 paper feed motor assy [3]. NOTE

- When mounting the tray 3 paper feed motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the tray 3 paper feed motor [2].

5. To reinstall, reverse the order of removal.
8.6.14 Tray 3 vertical transport motor (M112), tray 4 vertical transport motor (M122) (PC-115/PC-215)

## NOTE

- The tray 3 vertical transport motor and the tray 4 vertical transport motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 vertical transport motor.

1. Remove the rear cover.
G.8.6.3 Rear cover (PC-115/PC-215)

[1]
2. Remove three screws [1].
3. Disconnect the connector [2], and remove the tray 3 vertical transport motor assy [3].
NOTE

- When mounting the tray 3 vertical transport motor assy, use care not to forget to set the belt to the gear.

5. To reinstall, reverse the order of removal.
8.6.15 Tray 3 lift-up motor (M113), tray 4 lift-up motor (M123) (PC-115/PC-215)

## NOTE

- The tray 3 lift-up motor and the tray 4 lift-up motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 lift-up motor.

1. Remove the rear cover.
G.8.6.3 Rear cover (PC-115/PC-215)

[2]
2. Disconnect the connector [1].
3. Remove three screws [2], and remove the tray 3 lift-up motor [3].
4. To reinstall, reverse the order of removal.

### 8.7 Disassembly/reassembly procedure (PC-410)

### 8.7.1 Right door (PC-410)

1. Open the right door.
[1]

[2]
2. To reinstall, reverse the order of removal.

### 8.7.2 Rear right cover (PC-410)

2. To reinstall, reverse the order of removal.

### 8.7.3 Rear cover (PC-410)

2. To reinstall, reverse the order of removal.

### 8.7.4 Paper feed tray (PC-410)

1. Slide out the paper feed tray, and remove the paper.
2. Hold up the paper feed tray to remove it.
3. Remove five screws [1], and remove the rear cover [2].
4. Remove two screws [1], and remove the rear right cover [2].

5. To reinstall, reverse the order of removal.

### 8.7.5 Paper feed cabinet (PC-410)

## $\triangle$ CAUTION

- When holding the transportation handles, be careful not to catch your fingers in the main body.

1. Slide out the tray 2 and tray 3.

2. Slide the tray 2 and tray 3 back in.

[1]

## [2]

[1]

9. Pull out the transportation handles.
2. Remove the screw [1], and remove the fixing bracket [2].
3. Remove two screws [1], and remove the fixing bracket [2].
5. Remove two screws [1], and remove two fixing brackets [2].
6. Remove the screw [1], and remove the rear under cover [2].
7. Remove the harness from the wire saddle [1].
8. Disconnect two connectors [2].

### 8.7.6 Paper feed unit (PC-410)

1. Remove the right door.
G.8.7.1 Right door (PC-410)
2. Remove the rear right cover.
G.8.7.2 Rear right cover (PC-410)
3. Slide out the paper feed tray.

4. Hold the transportation handles at the right and left of the main body, and lift the main body [1] and then remove the paper feed cabinet [2].
NOTE

- When transporting or moving the main body, assign adequate number of persons.

4. Remove three tabs [1], and remove the harness cover [2].
5. Remove the harness from two wire saddles [3].
6. Disconnect two connectors [4].
7. Remove three screws [1], and remove the paper feed unit [2].
8. Disconnect all connectors on the PC control board.
9. Remove four screws [1], and remove the PC control board [2].

10. To reinstall, reverse the order of removal.

### 8.7.9 Paper feed motor (M131) (PC-410)

1. Remove the rear cover.
G.8.7.3 Rear cover (PC-410)

[1]

2. To reinstall, reverse the order of removal.

### 8.7.10 Vertical transport motor (M132) (PC-410)

1. Remove the rear cover.
G.8.7.3 Rear cover (PC-410)

[1] [2]
2. Remove four screws [1], and remove the right front cover [2].
3. Disconnect the connector [1]
4. Remove the screw [2], and remove the tray 3 paper empty indicator board [3].
5. Remove three screws [1]
6. Disconnect the connector [2], and remove the paper feed motor assy [3]. NOTE

- When mounting the paper feed motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the paper feed motor [2].
5. Remove the harness from the wire saddle [1].
6. Remove three screws [2]
7. Disconnect the connector [3], and remove the vertical transport motor assy [4]. NOTE

- When mounting the vertical transport motor assy, use care not to forget to set the belt to the gear.
[1]

6. To reinstall, reverse the order of removal.

### 8.7.11 Elevator motor (M134) (PC-410)

1. Slide out the paper feed tray.
2. Remove the rear cover.
G.8.7.3 Rear cover (PC-410)

## [3] [1]

5. To reinstall, reverse the order of removal.

### 8.7.12 Shifter motor (M133) (PC-410)

1. Slide out the paper feed tray.
2. Remove the rear cover.
G.8.7.3 Rear cover (PC-410)

[2]
3. To reinstall, reverse the order of removal.

### 8.7.13 Wire (PC-410)

1. Slide out the paper feed tray.

[1]
[1]
2. Remove three screws [1], and remove the vertical transport motor [2].
3. Disconnect the connector [1]
4. Remove three screws [2], and remove the elevator motor [3].
5. Disconnect the connector [1]
6. Remove three screws [2], and remove the shifter motor [3].
7. Remove three screws [1], and remove the cover [2].

8. Remove the paper feed tray. G.8.7.4 Paper feed tray (PC-410)

[1]
[2]

[1]
[1]
9. Remove two C-rings [1].
10. Remove two pulley covers [2].
11. Remove two pulleys [3].
12. Remove two screws [1], and remove the metal plate [2].
13. Remove six screws [1] of the right paper guide plate.

[1]

[1]

[2]
14. Remove the C-ring [1].
15. Remove two pulley covers [2].
16. Remove two pulleys [3].
17. Remove three cable holding jigs (white) [1] and the cable holding jig (black) [2], and remove the main tray [3]. NOTE

- Use care not to bend the wires.

14. Remove the right paper guide plate assy [1].
15. Turn the tray upside down.
16. Remove the C-ring [1] and the bushing [2].
17. Turn the tray back to the original status.
18. Remove two C-rings [1] and two wire pulleys [2].

19. Remove the wire from the wire pulley [2].

## NOTE

- Take care not to lose the pin.
- When reinstalling the wire pulley [2], check that the direction of the wire coming from both wire pulleys are the same.

20. To reinstall, reverse the order of removal.

### 8.8 Disassembly/reassembly procedure (PC-415)

### 8.8.1 Right door (PC-415)

1. Open the right door.

2. To reinstall, reverse the order of removal.

### 8.8.2 Rear right cover (PC-415)

[2]

[1]
2. To reinstall, reverse the order of removal.
2. Remove the screw [1], and remove the right door [2].

1. Remove two screws [1], and remove the rear right cover [2].

### 8.8.3 Rear cover (PC-415)

2. To reinstall, reverse the order of removal.

### 8.8.4 Paper feed tray (PC-415)

1. Slide out the paper feed tray, and remove the paper.
2. Hold up the paper feed tray to remove it.

3. To reinstall, reverse the order of removal.

### 8.8.5 Paper feed cabinet (PC-415)

## $\triangle$ CAUTION

- When holding the transportation handles, be careful not to catch your fingers in the main body.

1. Slide out the tray 2 and tray 3.
2. Remove the screw [1], and remove the fixing bracket [2].

[1]
3. Remove two screws [1], and remove the fixing bracket [2].

[1] [2]
4. Slide the tray 2 and tray 3 back in.
[2]

[1]

[1]

5. Pull out the transportation handles.

[2]

### 8.8.6 Paper feed unit (PC-415)

1. Remove the right door. G.8.8.1 Right door (PC-415)
2. Remove the rear right cover. G.8.8.2 Rear right cover (PC-415)
3. Slide out the paper feed tray.

4. Remove two screws [1], and remove two fixing brackets [2].
5. Remove the screw [1], and remove the rear under cover [2].
6. Disconnect two connectors [1].
7. Hold the transportation handles at the right and left of the main body, and lift the main body [1] and then remove the paper feed cabinet [2].
NOTE

- When transporting or moving the main body, assign adequate number of persons.

4. Remove three tabs [1], and remove the harness cover [2].
5. Remove the harness from two wire saddles [3].
6. Disconnect two connectors [4].
[2]

[1]
7. To reinstall, reverse the order of removal.

### 8.8.7 PC control board (PCCB) (PC-415)

1. Remove the rear cover.
G.8.8.3 Rear cover (PC-415)

[1]
2. To reinstall, reverse the order of removal

### 8.8.8 Tray 3 paper empty indicator board (PEIB/3) (PC-415)

1. Slide out the paper feed tray.

[1]

[1]
2. To reinstall, reverse the order of removal.

### 8.8.9 Paper feed motor (M131) (PC-415)

1. Remove the rear cover.
G.8.8.3 Rear cover (PC-415)
2. Remove three screws [1], and remove the paper feed unit [2].
3. Disconnect all connectors on the PC control board.
4. Remove four screws [1], and remove the PC control board [2].
5. Remove four screws [1], and remove the right front cover [2].
6. Disconnect the connector [1]
7. Remove the screw [2], and remove the tray 3 paper empty indicator board [3].

8. To reinstall, reverse the order of removal.

### 8.8.10 Vertical transport motor (M132) (PC-415)

1. Remove the rear cover.
G.8.8.3 Rear cover (PC-415)

[1]
[2]
[1]

2. To reinstall, reverse the order of removal.

### 8.8.11 Elevator motor (M134) (PC-415)

1. Slide out the paper feed tray.
2. Remove the rear cover.
G.8.8.3 Rear cover (PC-415)
3. Remove three screws [1]
4. Disconnect the connector [2], and remove the paper feed motor assy [3]. NOTE

- When mounting the paper feed motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the paper feed motor [2].
5. Remove the harness from the wire saddle [1]
6. Remove three screws [2].
7. Disconnect the connector [3], and remove the vertical transport motor assy [4]. NOTE

- When mounting the vertical transport motor assy, use care not to forget to set the belt to the gear.

5. To reinstall, reverse the order of removal.

### 8.8.12 Shifter motor (M133) (PC-415)

1. Slide out the paper feed tray.
2. Remove the rear cover.
G.8.8.3 Rear cover (PC-415)

[2]
3. To reinstall, reverse the order of removal.
4. Disconnect the connector [1]
5. Remove three screws [2], and remove the elevator motor [3].
6. Disconnect the connector [1]
7. Remove three screws [2], and remove the shifter motor [3].
8. Remove three screws [1], and remove the cover [2].
9. Remove five screws [1], and remove the front cover assy [2].
10. Remove the paper feed tray.
G.8.8.4 Paper feed tray (PC-415)

[1]
[2]

[1]
[1]

[1]

[1]
11. Remove two C-rings [1].
12. Remove two pulley covers [2].
13. Remove two pulleys [3].
14. Remove two screws [1], and remove the metal plate [2].
15. Remove six screws [1] of the right paper guide plate.
16. Remove the C-ring [1].
17. Remove two pulley covers [2].
18. Remove two pulleys [3].

[1]

[1]

[2]

19. To reinstall, reverse the order of removal

### 8.9 Disassembly/reassembly procedure (LU-207)

### 8.9.1 Right cover (LU-207)

1. Open the upper door.

### 8.9.2 Front cover (LU-207)

1. Remove the right cover. G.8.9.1 Right cover (LU-207)
[2]

[1]

[2]
2. To reinstall, reverse the order of removal.
3. Remove four screws [1] and remove the right cover [2].
4. Disconnect the connector [1], and remove the harness from the wire saddle [2].
5. Loosen five screws [1] and remove the front cover [2].
6. Remove two screws [1] and remove the plate [2].

7. To reinstall, reverse the order of removal.

### 8.9.4 Feed cover (LU-207)

1. Remove the right cover. G.8.9.1 Right cover (LU-207)
2. Remove the front cover.
G.8.9.2 Front cover (LU-207)
3. Remove the rear cover.
G.8.9.3 Rear cover (LU-207)

4. To reinstall, reverse the order of removal

### 8.9.5 Large capacity unit (LU-207)

[1]

3. Loosen five screws [1] and remove the rear cover [2].
4. Remove two screws [1] and remove the feed cover [2].

1. Slide the large capacity unit [2] while pressing on the lever [1], and remove from the main body.
2. Remove two screws [1] and remove the rear right cover [2] of the paper feed cabinet.

3. Disconnect two connectors [1], remove the screw [2] on the earth wire and the cord clamp [3].
NOTE

- When the optional transformer kit TK-101 is installed, disconnect the connector [4]

4. Remove the harness [1] from the rear right cover [2] of the paper feed cabinet.
5. Remove two screws [1] and remove the mounting plate [2].
6. Disconnect six connectors [1].
7. Remove four screws [2] and remove the LU drive board [3].
[1]

[3]
8. To reinstall, reverse the order of removal.

### 8.9.8 LU paper feed motor (M2) (LU-207)

1. Remove the right cover G.8.9.1 Right cover (LU-207)
2. Remove the rear cover. G.8.9.3 Rear cover (LU-207)
3. Remove the LU transport motor. G.8.9.9 LU transport motor (M3) (LU-207)

4. Disconnect the connector [1], remove two screws [2] and remove the LU lift-up motor [3].
5. Disconnect four connectors [1].
6. Remove the harness from eight harness guides [2], and remove the cord clamp [3].
7. Remove the screw [4] and disconnect the ground wire.
8. Remove 10 screws [1] and remove the drive assy [2].
9. Remove two screws [1] and remove the LU paper feed motor [2].

10. Disconnect the connector [1] and remove the harness from the edge cover [2] and two wire saddles [3].
11. Remove three screws [4] and remove the LU transport motor assy [5]
12. Remove two screws [1], and remove the LU transport motor [2].
13. Remove four screws [1] and remove the left cover [2].
14. Disconnect the connector [1]
15. Remove the harness from two wire saddles [2].
16. Remove the harness from three wire saddles [1].
17. Remove four screws [2] and remove the dehumidification heater [3].

### 8.9.11 Lift wire (LU-207)

(1) Removal

1. Remove the right cover.
G.8.9.1 Right cover (LU-207)
2. Remove the front cover
G.8.9.2 Front cover (LU-207)
3. Remove the rear cover.
G.8.9.3 Rear cover (LU-207)
4. Remove the LU transport motor.
G.8.9.9 LU transport motor (M3) (LU-207)

[2] [1]
[1] [3] [4]

[1]
5. Disconnect four connectors [1]
6. Remove the harness from eight wire saddles [2], and remove the cord clamp [3].
7. Remove the screw [4] and disconnect the ground wire.
8. Remove 10 screws [1] and remove the drive assy [2].
9. Remove two screws [1], and remove the metal plate [2].
10. Remove the harness from two wire saddles [3].
11. Remove four screws [1], and remove the LU drive board assy [2].
12. Remove the lift wire/L [2] from the rotation plate [1].

13. Remove the auxiliary wire [2] from the spring [1] on the front side.

[2]

[1]

14. Remove the E-ring [1] on the front side to remove the wire holding jig [2].
15. Remove the E-ring [2] on the rear side to remove the driving pulley [1].
16. Pull out three lift wires [1].
17. Remove three E-rings [1] and three wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].

[2]

(2) Mounting

18. Pull out the auxiliary wire [1] and two lift wires [2].
19. Remove three E-rings [1] and three wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].
20. Insert the lift wire/L [2] to the left hole [1] on the rear face.
21. Set the lift wire/L [2] to the near side groove [1] of the wire pulley and fix it with the wire holding jig [3] and the E-ring [4].

[6]
22. Set the lift wire/L [2] to the near side groove [1] of the wire pulley and the lift wire/S [4] to the far side groove [3], and fix it with the wire holding jig [5] and the E-ring [6].

[6]

[1]

[2]

[1]

[2]
23. NOTE

- It is correct when the tip of the wire [1] is the same length.

9. Take the edges of the lift wire/S [1] and the lift wire/L [2] to set them to the holes on the shaft [3].
10. Lift the edge of the lift wire/L [1] and set it in the hole on the shaft [2].
11. Mount the driving pulley [1] and secure it with the E-ring [2].

12. Insert the lift wire/L [2] to the right hole [1] on the front face.
13. Set the lift wire/L [2] to the near side groove [1] of the wire pulley and fix it with the wire holding jig [3] and the E-ring [4].
14. Insert the lift wire/S [2] to the left hole [1] on the front face.
15. Set the lift wire/L [2] to the near side groove [1] of the wire pulley and the lift wire/S [4] to the far side groove [3], and fix it with the wire holding jig [5] and the E-ring [6].

[1]

[3]

[2]
[2]

[1]
[1]

[2]
16. Set the lift wire/L [2] to the near side groove [1] of the wire pulley and the lift wire/S [4] to the far side groove [3], and fix it with the wire holding jig [5] and the E-ring [6].

## 17. NOTE

- It is correct when the tip of the wire [1] is the same length.

18. Take the edges of the lift wire/S [1] and the lift wire/L [2] to set them to the holes on the shaft [3]
19. Take the end of the auxiliary wire [1] and set it in the hole in the shaft [2].
20. Mount the driving pulley [1] and secure it with the E-ring [2].

Rear side

[1]
[2]
Front side [2]

[2]

[1]
21. Wind the wire to the driving pulley [2] by rotating the lift up shaft [1] (counterclockwise when seen from rear) until the tray assy has risen to the upper end.

## NOTE

- Wind the wire to the direction shown by the arrow.

22. Once the wire is wound until the tray assy is at the upper end, wind the auxiliary wire [2] once in a clockwise direction to the wire pulley [1] in front.
23. Set the auxiliary wire [1] in the front to the hook of the slide spring [2].
24. Mount the wire holding jig [1] and secure it with the E-ring [2].

## [1]

[1]

27. Wrap the lift wire/L [2] six times clockwise on the driving pulley [1] at the rear.
28. Turn the rotation plate [1] one and a half times clockwise from the position where the plate holds the tension, to set the lift wire/L [2].
29. NOTE

- Make sure that the tray assy is at the lower limit and the hire hook section of the rotation plate [1] is near the position indicated by the arrow in the figure.

### 8.10 Disassembly/reassembly procedure (LU-302)

### 8.10.1 Upper door (LU-302)

1. Remove the right cover. G.8.10.2 Right cover (LU-302)
2. Remove the front cover. G.8.10.3 Front cover (LU-302)
3. Remove the rear cover. G.8.10.4 Rear cover (LU-302)
4. Remove the feed cover. G.8.10.5 Feed cover (LU-302)
5. Open the upper door.

6. Remove two screws [1] and remove the fixed sheet metal [2].
7. Remove two screws [1], the sheet metal [2] and remove the upper door [3].
8. Disconnect the connector [1], and remove the harness from the wire saddle [2].

9. To reinstall, reverse the order of removal.

### 8.10.4 Rear cover (LU-302)

1. Remove the right cover. G.8.10.2 Right cover (LU-302)
[1]

[2]

2. To reinstall, reverse the order of removal.

### 8.10.5 Feed cover (LU-302)

1. Remove the right cover. G.8.10.2 Right cover (LU-302)
2. Remove the front cover. G.8.10.3 Front cover (LU-302)
3. Remove the rear cover. G.8.10.4 Rear cover (LU-302)
4. Loosen five screws [1] and remove the front cover [2].
5. Remove two screws [1] and remove the plate [2].
6. Loosen five screws [1] and remove the rear cover [2].

[2]
7. To reinstall, reverse the order of removal.

### 8.10.6 Large capacity unit (LU-302)

1. Remove the large capacity unit [1] from the main body.
2. Remove the two screws [1], and remove the cover [2].
3. Remove the harness from the wire saddle [1].
4. Disconnect two connector [1], the screw on the earth wire [2], and the cord clamp [3].
NOTE

- When the optional transformer kit TK-101 is installed, disconnect the connector [4].

6. To reinstall, reverse the order of removal.

### 8.10.7 LU drive board (LUDB) (LU-302)

1. Remove the right cover. G.8.10.2 Right cover (LU-302)
2. Remove the rear cover.
G.8.10.4 Rear cover (LU-302)

8.10.8 LU lift-up motor (M1) (LU-302)
3. Remove the right cover. G.8.10.2 Right cover (LU-302)
4. Remove the rear cover. G.8.10.4 Rear cover (LU-302)

## [1]

[3]
4. To reinstall, reverse the order of removal.

### 8.10.9 Dehumidification heater (DH) (LU-302)

1. Remove the right cover.
G.8.10.2 Right cover (LU-302)

2. Remove two screws [1] and remove the mounting plate [2].
3. Disconnect five connectors [1], remove four screws [2] and remove the LU drive board [3].
4. Disconnect the connector [1], remove two screws [2] and remove the LU lift-up motor [3].
5. Remove the harness from the connector [1] and three wire saddles [2].
[2]

### 8.10.10 Lift wire (LU-302)

## (1) Removal

1. Remove the right cover. G.8.10.2 Right cover (LU-302)
2. Remove the front cover.
G.8.10.3 Front cover (LU-302)
3. Remove the rear cover.
G.8.10.4 Rear cover (LU-302)
[1]

[2]

4. Remove four screws [1] and remove the dehumidification heater [2].
5. Remove the harness from two wire saddles [1], and disconnect the connector [2].
6. Remove the harness from the wire saddle [1], and disconnect the connector [2].
7. Remove the harness from the wire saddle [3], and disconnect the connector [4].
8. Remove the harness from the wire saddle [5].
9. Remove the harness from the wire saddle [1]
10. Remove the screw [2], and remove the ground terminal [3].
11. Disconnect the connector [4].

[3]
[1]

[1]
[2]
12. Remove nine screws [1], and remove the motor assy [2].
13. Remove the cable tie [3] from the motor assy [2].
14. Remove the harness from the edge cover [1] and four wire saddles [2]. 14. Disconnect the connector [3].
15. Remove five screws [1], and remove the drive board assy [2].
16. Remove the lift wire/L [2] from the rotation plate [1].
17. Remove the auxiliary wire [2] from the spring [1] on the front side.
[2]

[1]

[2][1]
18. Pull out three lift wires [1].

[4]
[2]

19. Remove the E-ring [1] on the front side to remove the wire holding jig [2].
20. Remove the E-ring [1] on the rear side to remove the driving pulley [2].
21. Remove two E-rings [1] and two wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].
22. Remove the E-ring [1] on the front side to remove the driving pulley [2].
23. Pull out the auxiliary wire [1] and two lift wires [2].

24. Remove two E-rings [1] and two wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].
(2) Mounting

25. Insert the lift wire/L [2] to the left hole [1] on the rear face.
26. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and secure it with the E-ring [3].
27. Insert the lift wire/S [2] to the right hole [1] on the rear face.

28. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and set the lift wire/S [4] to the far side groove [3] and secure them with the E-ring [5].
29. NOTE

- They are properly fixed if both edges of the wire [1] are at the same position.

6. Take the edges of the lift wire/S [1] and the lift wire/L [2] and set them to the holes on the shaft [3].
7. Take the edge of the lift wire/L [1] and set it to the hole on the shaft [2].
8. Mount the driving pulley [1] and secure it with the E-ring [2].
9. Insert the lift wire/L [2] to the right hole [1] on the front face.

10. Set the lift wire/L [2] to the near side groove [1] on the wire pulley and secure it with the E-ring [3].
11. Insert the lift wire/S [2] to the left hole [1] on the front face.
12. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and set the lift wire/S [4] to the far side groove [3] and secure them with the E-ring [5].

## 13. NOTE

- They are properly fixed if both edges of the wire [1] are placed at the same position.

14. Take the edges of the lift wire/S [1] and the lift wire/L [2] to set them to the holes on the shaft [3]
15. Take the edge of the auxiliary wire [1] and set it to the hole on the shaft [2].

[2] [1]
16. Mount the driving pulley [1] and secure it with the E-ring [2].

[2] [1]

Rear side

Front side
[2]

17. Wind the wire to the pulley [2] as rotating the lift up shaft [1] on the rear face counterclockwise and moving the tray assy to the upper end. NOTE

- Wind the wire to the direction shown by the arrow.

[2]

[1]

[1]

18. When the wire is wound with the tray assy being at the up end, wind the auxiliary wire [2] to the wire pulley [1] clockwise once.
19. Set the auxiliary wire [1] on the front face to the hook of the slide spring [2].

## 21. NOTE

- Check to make sure that the wire hook [1] is at the position shown on the picture when the tray assy is at the lower end.

22. Place a weight such as a package of paper, etc. [1] to move the tray assy down to the lower end.
23. Wrap the lift wire/L [2] on the driving pulley [1] on the rear face clockwise seven times.

24. Turn the rotation plate [1] one and a half times clockwise from the position where the plate holds the tension, to set the lift wire/L [2].
25. NOTE

- The rib edge [1] of the rotation plate must be around the dotted lines as shown in the picture when the tray assy is at the lowest level.

26. For the rest of the procedure for mounting, take the reverse steps from disassembling.

### 8.11 Disassembly/reassembly procedure (JS-506)

### 8.11.1 Exit tray 1 (JS-506)

1. Remove two screws [1], and remove the control panel left cover/1 [2].
2. Remove three screws [1], and remove the exit tray [2].

[1]
3. To reinstall, reverse the order of removal.

### 8.11.2 Exit tray 2 (JS-506)

1. Remove the job separator. G.8.11.3 Job separator (JS-506)
[2]

[1]

2. To reinstall, reverse the order of removal.

### 8.11.3 Job separator (JS-506)

2. Remove two claws [1] and move the exit tray 2 [2] upward.
3. Slide the exit tray 2 [2] to unlock the claws [3], and remove the exit tray 2 [2].

## 4. NOTE

- When mounting the exit tray 2, mount the exit tray 2 in the following step so that the shaft [2] of the actuator can be set to the groove [1] of the exit tray 2.
- Adjust the actuator [5] so that the positioning marks [3] and [4] will be aligned.
- Press the exit tray 2 down with the positioning mark [6] for the exit tray 2 and the positioning mark [7] for the shift unit being aligned.

1. Remove the screw [1], and remove the cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes. Be careful not to pinch the harness.
[2]

[1]

[1]
[2]

4. To reinstall, reverse the order of removal.

### 8.11.4 Sensor unit (JS-506)

5. To reinstall, reverse the order of removal.

### 8.11.5 JS control board (JSCB) (JS-506)

1. Remove the job separator.
G.8.11.3 Job separator (JS-506)
2. Remove the exit tray 2.
G.8.11.2 Exit tray 2 (JS-506)

[1]
3. Remove the cable tie [1], and disconnect two connectors [2].
4. Remove two screws [1], and remove the job separator [2].
5. Remove two screws [1], and remove the control panel left cover/1 [2].
6. Remove the harness from the wire saddle [1] and the edge cover [2].
7. Disconnect the connector [3].
8. Remove the screw [4], and remove the sensor unit [5].
9. Remove the cover [1].

10. To reinstall, reverse the order of removal.

### 8.11.6 Tray shift motor (M1) (JS-506)

1. Remove the job separator.
G.8.11.3 Job separator (JS-506)
2. Remove the exit tray 2.
G.8.11.2 Exit tray 2 (JS-506)

[2]

[1]
3. To reinstall, reverse the order of removal.
4. Disconnect three connectors [1].
5. Remove four screws [2], and remove two ground terminals [3].
6. Remove the JS control board [4].
7. Disconnect two connectors [1].
8. Remove the actuator [2].

NOTE

- Be careful not to lose the spring [3] and stopper [4].

5. Remove two screws [5], and remove the cover [6].
6. Remove the E-ring [1], and remove the gear [2]
7. Remove three screws [3], and remove the tray shift motor drive assy [4]. NOTE

- When mounting the tray shift motor drive assy, place the earth terminal [5] on the plate for the tray shift motor drive assy and tighten the screw.

8. Remove two screws [1], and remove the tray shift motor [2].

### 8.12 Disassembly/reassembly procedure (FS-533)

### 8.12.1 Front cover (FS-533)

1. Remove two screws [1] and remove the antistatic brush [2]. NOTE

- Make sure not to deform the brush by touching it.
- Make sure not to touch the upper surface of the transport unit [3] as it damages the guide plates.

2. Remove four screws [1] and two tabs [2], and remove the front cover [3].

## 3. NOTE

- When the punch kit (PK-519) is installed, the cover [1] should be removed.

4. To reinstall, reverse the order of removal.

### 8.12.2 Upper cover (FS-533)

1. Remove the front cover.
G.8.12.1 Front cover (FS-533)
2. Remove the rear cover.
G.8.12.3 Rear cover (FS-533)

3. To reinstall, reverse the order of removal.
4. Remove the screw [1], and remove the cover [2].

### 8.12.3 Rear cover (FS-533)

2. To reinstall, reverse the order of removal.

### 8.12.4 Finisher (FS-533)

1. Remove three screws [1], and remove the rear left cover [2] of the main body.
2. Remove the screw [1], and remove the cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

3. Remove the cable tie [1], and disconnect two connectors [2].

4. To reinstall, reverse the order of removal.
5. Slide the finisher by pulling the lever [1]
6. Remove two screws [2], and remove the cover [3]. NOTE

- When mounting the cover, make the finisher's cable come out from the cover at the position shown in the illustration.
- When carrying the finisher, be sure to hold the finisher by the sides as shown in the illustration

8.12.5 Stapler unit (FS-533)

1. Remove the front cover. G.8.12.1 Front cover (FS-533)

[2] [4]

[1] [3] [1]
[2]

2. To reinstall, reverse the order of removal.
3. NOTE

- After mounting the finisher to the main body, press the antistatic brush [1] toward the rear using a rule or the like.
- Make sure that brush [1] touches the aluminum sheet [2] affixed to the bottom of the scanner unit.

3. Remove two screws [1], and remove the cover [2].
4. Remove the screw [3], and remove the stapler unit assy [4].
5. Remove two screws [1], and remove the stapler unit [2]. NOTE

- When replacing the stapler unit, attach the guide [3] (Parts No.: A2YU PPE9 \#\#) to the stapler unit.

### 8.12.6 Paper exit tray unit (FS-533)

2. To reinstall, reverse the order of removal.

### 8.12.7 FS control board (FSCB) (FS-533)

1. Remove the rear cover.
G.8.12.3 Rear cover (FS-533)
[1]

[2]
2. To reinstall, reverse the order of removal.
3. Install the firmware.

### 8.12.8 Stapler relay board (STREYB) (FS-533)

1. Remove the front cover G.8.12.1 Front cover (FS-533)
2. Remove the stapler unit. G.8.12.5 Stapler unit (FS-533)

[3]
3. Remove five screws [1], and remove the paper exit tray unit [2].
4. Remove all connectors from the board.
5. Remove the screw [1], and remove the FS control board [2].
6. Pull out the stapler drive assy [1]
7. Release the lock [2] of the board cover, and remove the flat cable [3].
8. Unhook the tab [1], and remove the board cover [2].

9. To reinstall, reverse the order of removal.

### 8.12.9 Paper conveyance motor (M101) (FS-533)

1. Remove the rear cover.
G.8.12.3 Rear cover (FS-533)

2. Disconnect the connector [1]
3. Remove the spring [2].
4. Remove two screws [3], and remove the paper conveyance motor assy [4].
5. Remove two screws [1], and remove the paper conveyance motor [2].
6. Disconnect the connector [1]
7. Remove the spring [2].
8. Remove two screws [3], and remove the paper exit motor assy [4].
9. Remove two screws [1], and remove the paper exit motor [2].
10. To reinstall, reverse the order of removal.

### 8.12.11 Alignment roller motor (M103) (FS-533)

1. Remove the front cover.
G.8.12.1 Front cover (FS-533)
[2] [1] [3] [2]

2. Disconnect the connector [1].
3. Remove two screws [2], and remove the alignment roller motor [3].
4. Disconnect the connector [1].
5. Remove the spring [2].
6. Remove two screws [3], and remove the exit roller lift up motor assy [4].
7. Remove two screws [1], and remove the exit roller lift up motor [2].

[1]
8. To reinstall, reverse the order of removal.

### 8.12.13 Alignment motor/F (M105), Alignment motor/R (M106) (FS-533)

1. Remove the paper exit tray unit. G.8.12.6 Paper exit tray unit (FS-533)
[2]

[1]
2. Remove two screws [1], and remove the plate [2].

3. To reinstall, reverse the order of removal.

### 8.12.14 Stapler movement motor (M107) (FS-533)

1. Remove the front cover.
G.8.12.1 Front cover (FS-533)
2. Remove the stapler unit.
G.8.12.5 Stapler unit (FS-533)

3. Remove two screws [1], and remove the cover [2].

NOTE

- When removing the cover [2], two claws [3] may come off and the alignment tray [4] may come up. This may cause the alignment tray to contact the actuator [5] and cause malfunction of the actuator.
- When mounting the cover [2], make sure two claws [3] are attached to the plate.

4. Remove two screws [1], and pull out the paper surface detect solenoid assy [2].
5. Disconnect the connector [1], remove two screws [2], and remove the alignment motor/F [3].
6. Disconnect the connector [4], remove two screws [5], and remove the alignment motor/R [6].
7. Pull out the stapler drive assy [1].
8. Release the lock [2] of the board cover, and remove the flat cable [3].

## [2]

7. To reinstall, reverse the order of removal.

### 8.12.15 Tray lift up motor (M109) (FS-533)

1. Remove the rear cover.
G.8.12.3 Rear cover (FS-533)

[1]

[1]

2. To reinstall, reverse the order of removal.
3. Remove two screws [1], and remove the stapler movement motor [2].
4. Disconnect the connector [3].
5. Disconnect the connector [1].
6. Remove the harness tie [2] and harness from the harness guide [3].
7. Remove the screw [1], and remove the finisher's cable [2].
8. Remove two screws [1], and remove the harness guide [2].
9. Remove two screws [2], and remove the tray lift up motor [1].

### 8.12.16 Paper surface detect solenoid (SD101) (FS-533)

1. Remove the paper exit tray unit. G.8.12.6 Paper exit tray unit (FS-533)

## [2]

[1]

[2]

2. Remove two screws [1], and remove the plate [2].
3. Remove two screws [1], and remove the cover [2].

NOTE

- When removing the cover [2], two claws [3] may come off and the alignment tray [4] may come up. This may cause the alignment tray to contact the actuator [5] and cause malfunction of the actuator.
- When mounting the cover [2], make sure two claws [3] are attached to the plate.

4. Remove two screws [1], and pull out the paper surface detect solenoid assy [2].
5. Remove two screws [1], and pull out the paper surface detect solenoid [2]

6. To reinstall, reverse the order of removal.

### 8.12.17 Batch solenoid (SD102) (FS-533)

1. Remove the rear cover.
G.8.12.3 Rear cover (FS-533)
2. Remove the FS control board.
G.8.12.7 FS control board (FSCB) (FS-533)

[1]

3. Remove the harness from the wire saddle [1]
4. Disconnect the connector [2]
5. Remove the screw [3], and remove the batch solenoid assy [4].
6. Remove the screw [1], and remove the batch solenoid [2].
7. Remove the spring [1].

[4] [3]

[2] [1]
8. To reinstall, reverse the order of removal.

### 8.12.19 Paper exit paddle (FS-533)

2. To reinstall, reverse the order of removal.

### 8.13 Disassembly/reassembly procedure (PK-519)

### 8.13.1 Punch kit (PK-519)

1. Remove the finisher from the main body. G.8.12.4 Finisher (FS-533)

NOTE

- Make sure that the punch unit is locked to the finisher before removing it.

2. Remove the rear cover.
G.8.12.3 Rear cover (FS-533)

3. Open the punch unit.
4. Remove the stopper arm [1] from the stopper pin [2].
5. Remove the harness from the wire saddle [1].
6. Disconnect the connector [2]
7. Remove the screw [3], and remove the paper exit roller solenoid [4].

8. To reinstall, reverse the order of removal.

### 8.13.2 PK control board (PKCB) (PK-519)

1. Remove the finisher.
G.8.12.4 Finisher (FS-533)
[2]

[1]

2. To reinstall, reverse the order of removal.

### 8.13.3 Punch motor (M201) (PK-519)

1. Remove the finisher.
G.8.12.4 Finisher (FS-533)
2. Disconnect two connectors [1]
3. Remove the screw [1], and remove the punch unit [2].
4. Remove two screws [1], and remove the plate [2].
5. Disconnect two connectors [1]
6. Remove the screw [2], and pull out the PK control board [3].
7. Disconnect two connectors [4], and remove the PK control board [3].
[2]

[1]
[1]

[2]

8. Remove two screws [1], and remove the plate [2].
9. Remove the screw [1], and pull out the PK control board [2].
10. Disconnect the connector [3].
11. Remove two screws [1], and remove the plate [2].
12. Remove two screws [1], and remove the drive belt [2] from the gear [3].
13. Remove the punch motor [4].
14. To reinstall, reverse the order of removal.

### 8.14 Disassembly/reassembly procedure (FS-534/FS-534SD/RU-513)

8.14.1 Rear cover (FS-534/FS-534SD)

3. To reinstall, reverse the order of removal.

1. Remove the harness from the wire saddle [1].
2. Remove eight screws [2], and remove the rear cover [3].
8.14.2 Front door (FS-534/FS-534SD)

3. To reinstall, reverse the order of removal.

### 8.14.3 Front upper cover (FS-534/FS-534SD)

1. Remove the front door.
G.8.14.2 Front door (FS-534/FS-534SD)

$$
[2][3][1][4][2]
$$

[2]
4. To reinstall, reverse the order of removal.

### 8.14.4 Left lower cover (FS-534/FS-534SD)

1. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)

[1]

2. To reinstall, reverse the order of removal.
8.14.5 Front lower cover (FS-534/FS-534SD)
3. Remove the front door.
4. Remove the upper and lower stoppers [1], and remove the front door [2].
5. Remove the dial (FS5) [1].
6. Remove five screws [2], and remove the front upper cover [3]. NOTE

- When the saddle unit is attached, move the guide plate [4] and then remove the front upper cover.

2. Remove two screws [1]. NOTE

- If the saddle unit is installed, pull out the saddle unit, and then remove two screws [1].

3. Remove the left lower cover [1].

> G.8.14.2 Front door (FS-534/FS-534SD)
2. Remove the front upper cover.
G.8.14.3 Front upper cover (FS-534/FS-534SD)
3. Remove the left lower cover.

Left lower cover (FS-534/FS-534SD)

8.14.6 Finisher (FS-534/FS-534SD)

# $\triangle$ CAUTION 

- When transporting the finisher, make sure to push it to the direction as shown in the illustration. (to prevent turnover during transportation)

1. Remove the screw [1], and remove the cover [2]. NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

2. Remove the cable tie [1], and disconnect two connectors [2].
3. Open the front door.
[2]

[1]

4. To reinstall, reverse the order of removal.

### 8.14.7 Relay unit (RU-513)

1. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)

[1]
2. To reinstall, reverse the order of removal.

### 8.14.8 Stapler unit (FS-534/FS-534SD)

1. Open the front door.
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)

3. Remove the screw [1], and pull out the lever [2].

## NOTE

- At the time of the finisher installation, make sure that the screw hole [3] locates within the scope of the mounting hole of the lever [4].

5. Disconnect the connector [1].
6. Remove the finisher [2] from the main body.
7. Remove two screws [1], and remove the RU transport unit [2].
8. When the saddle unit is attached, remove the C-clip [1], and remove the guide plate [2].

[1] [1]
[2]

[1]

[1]

[3] [2]
9. Rotate the stapler transfer dial [1] until the stapler [2] has been moved to the location shown in the figure (the location where the back-end stopper [3] does not interact with the clincher staple arm [4]).
10. Disconnect two connectors [1] from the back of the finisher.
11. Remove the screw [2].
12. Remove the screw [1].
13. Remove two screws [1] from the front of the finisher.
14. Remove the stapler assy [1] from the finisher.

NOTE

- While removing the stapler assy [1], be careful not to hit the stapler against the finisher frame.

10. Put the stapler assy [2] on a stable workbench.
11. Rotate the stapler transfer dial [1] until the stapler unit [3] has been moved to the near side [4].
12. Remove two screws [2], and remove the cover [1].

13. Disconnect two connectors [1] of the stapler unit [2].
14. Flip the stapler assy [2] over.
15. Remove two E-rings [1] from the guide shafts.
16. Remove the clear spacers [1] and white rollers [2] on both shafts [3]. NOTE

- Be careful not to lose the clear spacers.

17. Slowly remove the stapler unit [1] from the stapler assy [4].

[3]

NOTE

- Ensure that the harness does not get damaged in the process.
- Be careful not to lose the white rollers.

19. Remove two screws [3] of the stapler unit, and remove the stapler base plate [2] from the stapler unit [1].

[1] [2] [3]
[3]
20. To reinstall, reverse the order of removal. NOTE

- When installing the stapler unit, ensure that the two connectors [1] removed in the process 13 are put through the hole in the base plate [2] and connected to the stapler unit before attaching the base plate.

### 8.14.9 Sensor unit (FS-534/FS-534SD)

1. Remove the horizontal transport unit. G.8.14.7 Relay unit (RU-513)
2. Remove two screws [1], and remove the control panel left cover/1 [2].
[2]

[1]

3. To reinstall, reverse the order of removal.
4. Remove the harness from the wire saddle [1] and the edge cover [2]
5. Disconnect the connector [3]
6. Remove the screw [4], and remove the sensor unit [5].

## $\triangle$ CAUTION

- Be careful not to catch your finger in the edge of the rail when mounting the saddle unit on the right rail for the saddle unit installation.

- Be careful not to jam your finger in the connecting section of the pantograph

1. Remove the finisher. G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the front door of the finisher. G.8.14.2 Front door (FS-534/FS-534SD)

3. Pull out the saddle unit [1].
4. Remove the left lower cover. Left lower cover (FS-534/FS-534SD)
5. Remove the front upper cover.
G.8.14.3 Front upper cover (FS-534/FS-534SD)
6. Remove the front lower cover.
G.8.14.5 Front lower cover (FS-534/FS-534SD)

7. Remove the screw [1], and remove the pantograph [2].
8. NOTE

- For installation of the pantograph, insert three hooks [1] on the pantograph of the saddle unit into the back holes inside the finisher.

[1]

[1]

10. Remove the screw [1].
11. Push back the saddle unit into the position of the illustration, and then remove the screw [1].
12. Pull out the saddle unit, and then remove the screw [1].
13. Insert the rail [1] on the right side into the finisher.

14. Grip the portion as shown in the illustration [1] to raise the saddle unit and take it out.
NOTE

- For installation of the saddle unit, insert two hooks on the left rail [3] into the two holes of the saddle unit [2].

15. To reinstall, reverse the order of removal.

### 8.14.11 FS control board (FSCB) (FS-534/FS-534SD)

1. Remove the finisher from the main body.
G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)

3. Remove all connectors from the board
4. Remove four screws [1], and remove the FS control board [2].
5. To reinstall, reverse the order of removal.

### 8.14.12 FNS entry transport motor (M2) (FS-534/FS-534SD)

1. Remove the finisher from the main body.
G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)
[3] [1]

[2]
3. Disconnect the connector [1]
4. Remove two screws [2], and remove the FNS entry transport motor assy [3].

5. To reinstall, reverse the order of removal.

### 8.14.13 FNS discharge motor (M3) (FS-534/FS-534SD)

1. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)

[2] [1]
[2]

[1]
3. To reinstall, reverse the order of removal.

### 8.14.14 Receiving roller retraction motor (M4) (FS-534/FS-534SD)

1. Remove the finisher from the main body.
G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the front door.
G.8.14.2 Front door (FS-534/FS-534SD)
3. Remove the front upper cover.
G.8.14.3 Front upper cover (FS-534/FS-534SD)

[2]
4. To reinstall, reverse the order of removal.

### 8.14.15 FNS paddle motor (M5) (FS-534/FS-534SD)

1. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the front door.
G.8.14.2 Front door (FS-534/FS-534SD)
3. Remove the front upper cover.
G.8.14.3 Front upper cover (FS-534/FS-534SD)

4. Disconnect the connector [1]
5. Remove two screws [2], and remove the FNS paddle motor [3].
6. To reinstall, reverse the order of removal.
8.14.16 Trailing edge stopper motor (M6) (FS-534/FS-534SD)
7. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)
8. Remove the front door.
G.8.14.2 Front door (FS-534/FS-534SD)
9. Remove the front upper cover.
G.8.14.3 Front upper cover (FS-534/FS-534SD)

10. Disconnect the connector [1].
11. Remove the harness from three wire saddles [2].
12. Remove two screws [3], and remove the trailing edge stopper motor assy [4].
[2]

[1]
13. Remove two screws [1], and remove the trailing edge stopper motor [2].
14. Disconnect the connector [1].
15. Remove the harness from the wire saddle [2].
16. Remove two screws [3], and remove the alignment motor/front assy [4].
[2]

[1]
17. To reinstall, reverse the order of removal.

### 8.14.18 Alignment motor/rear (M8) (FS-534/FS-534SD)

1. Remove the finisher from the main body.
G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)

3. Disconnect the connector [1].
4. Remove two screws [1], and remove the alignment motor/front [2].
5. Remove two screws [2], and remove the alignment motor/rear assy [3].
6. Remove two screws [1], and remove the alignment motor/rear [2].

[1]
7. To reinstall, reverse the order of removal.

### 8.14.19 Pre-eject drive motor (M9) (FS-534/FS-534SD)

1. Remove the finisher from the main body.
G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.
4. Remove two screws [1], and remove the exit tray [2].

[3]

5. Remove the rotating disk [1].
6. Remove two screws [2], and remove the pre-eject drive motor [3].
7. To reinstall, reverse the order of removal.

### 8.14.20 Bundle eject motor (M10) (FS-534/FS-534SD)

1. Remove the finisher from the main body.
G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.

[1]
4. Remove two screws [1], and remove the exit tray [2].
[1]

[1] [2]

[2]
5. Remove four screws [1], and remove the plate [2].
6. Disconnect the connector [1].
7. Remove seven screws [2], and remove the left lower cover [3]. NOTE

- When the saddle unit is attached, disconnect two connectors.
[1]

[2]

[1] [2]

[3]
[4]
[2]

15. To reinstall, reverse the order of removal.

### 8.14.21 Main tray up/down motor (M11) (FS-534/FS-534SD)

1. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover. G.8.14.1 Rear cover (FS-534/FS-534SD)
3. Disconnect the connector [1].
4. Remove seven screws [1], and remove the left upper cover [2]
5. Disconnect the connector [3].
6. Disconnect the connector [1], and remove the harness from the wire saddle [2].
7. Remove two screws [3], and remove the bundle eject motor assy [4].
8. Remove the rotating disk [1].
9. Remove two screws [2], and remove the bundle eject motor [3].

10. To reinstall, reverse the order of removal.

### 8.14.22 Paper receiving control motor (M12) (FS-534/FS-534SD)

1. Remove the finisher from the main body.
G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.
4. Remove two screws [1]

[1]

5. Disconnect the connector [1], and remove the paper receiving control motor assy [2].
6. Remove two screws [1], and remove the paper receiving control motor [2].
[2]

[1]
7. To reinstall, reverse the order of removal.

### 8.14.23 Side stapler movement motor (M13) (FS-534/FS-534SD)

1. Remove the finisher from the main body. G.8.14.6 Finisher (FS-534/FS-534SD)
2. Remove the rear cover.
G.8.14.1 Rear cover (FS-534/FS-534SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.
4. Disconnect the connector [1].

[1]
[2]

5. To reinstall, reverse the order of removal.

### 8.15 Disassembly/reassembly procedure (SD-511)

### 8.15.1 Front cover (SD-511)

1. Remove the screw [1], and remove the jam clearing dial [2].
2. Remove four screws [3], and remove the front cover [4].
3. Remove the pin [1], and remove the exit lever [2].
4. Remove the paper exit tray [1].

[1]
5. To reinstall, reverse the order of removal.

### 8.15.3 Staple unit (SD-511)

1. Remove the saddle unit. G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)

[1]

[2] [1]

[1]
3. Remove four screws [1], and remove the plate [2].
4. Remove three screws [1], and remove the tri-folding guide motor assy [2].
5. Remove four screws [1], and remove the conveyance assy [2].
[2]

[1]
[3]
[1]

[2]

[2]

[1]

## [1]

6. Remove two screws [1], and remove the plate [2].
7. Remove two screws [1].
8. Detach the board support film [3] from the harness guide tabs [2].
9. Remove the harness from the wire saddle [1].
10. Disconnect the connector [2].
11. Remove four screws [3], and remove the SD drive board assy [4].
12. Remove two screws [1], and remove the plate [2].
13. Remove the screw [1].
14. Release two tabs [2], and remove the cover [3].
15. Disconnect the connector [1].

[1]

[2]
17. To reinstall, reverse the order of removal.

### 8.15.4 SD drive board (SDDB) (SD-511)

1. Remove the saddle unit.
G.8.14.10 Saddle unit (FS-534SD)
2. Remove two screws [1].
3. Remove the board support film [3] from the harness guide [2].
4. Disconnect all the connectors from the board.
5. Remove four screws [1].
6. Detach the SD drive board [3] from the two tabs [2].

NOTE

- When the SD drive board (SDDB) has been replaced, be sure to remount EEPROM (U3) [4].
Remove EEPROM (U3) [4] from the old SD drive board and mount it on the new SD drive board.

## 7. NOTE

- When mounting EEPROM (U3), align the notches (indicated by " $A$ " in the illustration).

8. To reinstall, reverse the order of removal.

NOTE

- After replacing the SD drive board, be sure to install the latest firmware.

### 8.15.5 SD transport motor (M1) (SD-511)

1. Remove the saddle unit.
G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover. G.8.15.1 Front cover (SD-511)
[2]

[3]
3. Disconnect the connector [1]
4. Remove two screws [2], and remove the SD transport motor [3].
5. To reinstall, reverse the order of removal.

### 8.15.6 Paper discharge control motor (M2) (SD-511)

1. Remove the saddle unit G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)
[3][2] [1]

[4]
[3]
3. To reinstall, reverse the order of removal.

### 8.15.7 Alignment motor (M3) (SD-511)

1. Remove the saddle unit.
G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)

[2]

3. Remove the harness from the wire saddle [1], and disconnect the connector [2].
4. Remove two screws [3], and remove the paper discharge control motor [4].
5. Remove four screws [1], and remove the plate [2].
6. Remove four screws [1], and remove the plate [2].

7. To reinstall, reverse the order of removal.

### 8.15.8 Stopper drive motor (M4) (SD-511)

1. Remove the saddle unit G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)

[2]

3. To reinstall, reverse the order of removal

### 8.15.9 Center fold roller motor (M5) (SD-511)

1. Remove the saddle unit
G.8.14.10 Saddle unit (FS-534SD)

[1]
2. To reinstall, reverse the order of removal.

### 8.15.10 Tri-folding guide motor (M6) (SD-511)

1. Remove the saddle unit.
G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover. G.8.15.1 Front cover (SD-511)
3. Disconnect the connector [1]
4. Remove two screws [2], and remove the alignment motor [3]
5. Remove six screws [1], and remove the plate [2].
6. Disconnect the connector [1].
7. Remove two screws [2], and remove the stopper drive motor [3].
8. Remove four screws [2], and remove the center fold roller motor [3].
[2]

[3]
[1]
9. To reinstall, reverse the order of removal.

### 8.15.11 SD paddle motor (M7) (SD-511)

1. Remove the saddle unit
G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)

[1]

[1]

[2]
3. To reinstall, reverse the order of removal.

### 8.15.12 Center fold guide motor (M8) (SD-511)

1. Remove the saddle unit
2. Disconnect the connector [1]
3. Remove two screws [2], and remove the tri-folding guide motor [3]
4. Disconnect the connector [1]
5. Remove two screws [2], and remove the SD paddle motor assy [3].

## 5. NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

6. Remove two screws [1], and remove the SD paddle motor [2].
G.8.14.10 Saddle unit (FS-534SD)
7. Remove the front cover.
G.8.15.1 Front cover (SD-511)

[1]

## [3]

5. To reinstall, reverse the order of removal.

### 8.15.13 Center fold knife motor (M9) (SD-511)

1. Remove the saddle unit. G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover. G.8.15.1 Front cover (SD-511)

3. Disconnect the connector [1]
4. Remove two screws [2], and remove the center fold guide motor [3].
5. Remove six screws [1], and remove the plate [2].
6. Disconnect the connector [1].
7. Remove four screws [2], and remove the center fold knife motor [3].
8. To reinstall, reverse the order of removal.

### 8.15.14 Stopper solenoid (SD1) (SD-511)

1. Remove the saddle unit
G.8.14.10 Saddle unit (FS-534SD)
2. Remove the front cover.
G.8.15.1 Front cover (SD-511)

3. Remove six screws [1], and remove the plate [2].
4. Place the saddle unit as shown in the illustration.

[1]

[1]
5. Raise the saddle unit.

6. Remove two stoppers [1], and remove the guide plate [2].
7. Slide the lever unit [3] upward.
8. Remove two screws [1], and disconnect the connector [2].
9. Disconnect the connector [1], and remove the harness from three wire saddles [2].

## [2]

[1]

## [1]

[1]
[1]

[2]
[1]

10. Disconnect the connector [1], and remove the drive lever [2].
11. Remove two screws [1].
12. Remove the guide plate assy [1].

NOTE

- When reinstalling the guide plate assy, perform mechanical adjustment.
I.25.1.1 Half-fold skew adjustment

13. Remove four screws [1], and remove the plate [2].
14. Remove two E-rings [1], and remove the stopper guide [2].

[1]

[2]
[1]

[1]
[2]
15. To reinstall, reverse the order of removal.
16. NOTE

- When reinstalling the stopper guide, fit the belt into the stopper guide groove [1].

16. Remove the screw [1], and remove the plate [2].
17. Remove the screw [1].
18. Disconnect the connector [1], and remove the stopper solenoid [2]. NOTE

- When reinstalling the stopper solenoid, fit its tip into the place [3] shown in the illustration.

### 8.16 Disassembly/reassembly procedure (FS-536/FS-536SD)

8.16.1 Rear cover (FS-536/FS-536SD)

2. To reinstall, reverse the order of removal.
8.16.2 Front door (FS-536/FS-536SD)

2. To reinstall, reverse the order of removal.

### 8.16.3 Front upper cover (FS-536/FS-536SD)

1. Remove the front door.
G.8.16.2 Front door (FS-536/FS-536SD)

2. To reinstall, reverse the order of removal.

### 8.16.4 Left lower cover (FS-536/FS-536SD)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove eight screws [1], and remove the rear cover [2].
3. Remove the upper and lower stoppers [1], and remove the front door [2].
4. Remove the dial (FS5) [1].
5. Remove five screws [2], and remove the front upper cover [3]. NOTE

- When the saddle unit is attached, move the guide plate [4] and then remove the front upper cover.

[1]

[1]

4. To reinstall, reverse the order of removal.

### 8.16.5 Front lower cover (FS-536/FS-536SD)

1. Remove the front door. G.8.16.2 Front door (FS-536/FS-536SD)
2. Remove the front upper cover.
G.8.16.3 Front upper cover (FS-536/FS-536SD)
3. Remove the left lower cover.

Left lower cover (FS-536/FS-536SD)

5. To reinstall, reverse the order of removal.
2. Remove two screws [1]. NOTE

- If the saddle unit is installed, pull out the saddle unit, and then remove two screws [1].

3. Remove the left lower cover [1].
4. Remove four screws [1], and remove the front lower cover [2].

## $\triangle$ CAUTION

- When transporting the finisher, make sure to push it to the direction as shown in the illustration. (to prevent turnover during transportation)

1. Remove the DF cable cover. G.6.2.22 DF cable cover
2. Remove the cable tie [2], and disconnect two connectors [1].

3. Open the front door.

4. Remove the screw [1], and pull out the lever [2]. NOTE

- At the time of the finisher installation, make sure that the screw hole [3] locates within the scope of the mounting hole of the lever [4].
[2]

[^31]5. Disconnect the connector [1].
6. Remove the finisher [2] from the main body.

8. NOTE

- The blade spring [1] of the installed plate should be in contact with the main body.

### 8.16.7 Relay unit (FS-536/FS-536SD)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove two screws [1], and remove the RU transport unit [2].

3. To reinstall, reverse the order of removal.
8.16.8 Sensor unit (FS-536/FS-536SD)
4. Remove the RU transport unit. G.8.16.7 Relay unit (FS-536/FS-536SD)

5. Remove two screws [1], and remove the control panel left cover/1 [2].

6. To reinstall, reverse the order of removal.

### 8.16.9 Stapler unit (FS-536/FS-536SD)

1. Open the front door.
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)

[2]
[1]
3. Remove the harness from the wire saddle [1] and the edge cover [2]
4. Disconnect the connector [3].
5. Remove the screw [4], and remove the sensor unit [5].
6. When the saddle unit is attached, remove the C-clip [1], and remove the guide plate [2].
7. Turn the stapler transfer dial [1] to move the stapler [2] to the position shown in the figure (the position where the back-end stopper [3] does not interfere with the clincher staple arm [4]).
8. Disconnect two connectors [1] from the back of the finisher.
9. Remove the screw [2].

10. Remove the screw [1].

11. Remove the stapler assy [1] from the finisher.

NOTE

- While removing the stapler assy [1], be careful not to hit the stapler against the finisher frame.

10. Put the stapler assy [2] on a stable workbench.
11. Rotate the stapler transfer dial [1] until the stapler unit [3] has been moved to the near side [4].

12. Remove two screws [2], and remove the cover [1].
13. Disconnect two connectors [1] of the stapler unit [2].
14. Flip the stapler assy [2] over.
15. Remove two E-rings [1] from the guide shafts.

16. Remove the clear spacers [1] and white rolls [2] on both shafts [3] NOTE

- Be careful not to lose the clear spacers.

17. Slowly remove the stapler unit [1] from the stapler assy [4].
18. Remove the white rolls [2] on both shafts [3].

NOTE

- Ensure that the harness does not get damaged in the process.
- Be careful not to lose the white rolls.

19. Remove two screws [3] of the stapler unit and remove the base plate [2] of the stapler unit from the stapler unit [1].

[1] [2] [3]
[3]
20. To reinstall, reverse the order of removal.

NOTE

- When installing the stapler unit, ensure that two connectors [1] removed in the process 13 are put through the hole in the base plate [2] and connected to the stapler unit before attaching the base plate.

### 8.16.10 FS control board (FSCB) (FS-536/FS-536SD)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover. G.8.16.1 Rear cover (FS-536/FS-536SD)

3. Disconnect all connectors from the board
4. Remove four screws [1], and remove the FS control board [2].
5. Disconnect the connector [1]
6. Remove two screws [2], and remove the FNS entry transport motor assy [3].
7. Remove two screws [1], and remove the FNS entry transport motor [2].
8. To reinstall, reverse the order of removal.

### 8.16.12 FNS discharge motor (M3) (FS-536/FS-536SD)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)

[2] [1]
3. Remove the harness from the wire saddle [1], and disconnect the connector [2].
4. Remove two screws [3], and remove the FNS discharge motor assy [4].
[2]

[1]
5. To reinstall, reverse the order of removal.

### 8.16.13 Receiving roller retraction motor (M4) (FS-536/FS-536SD)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the front door.
G.8.16.2 Front door (FS-536/FS-536SD)
3. Remove the front upper cover.
G.8.16.3 Front upper cover (FS-536/FS-536SD)

4. To reinstall, reverse the order of removal.

### 8.16.14 FNS paddle motor (M5) (FS-536/FS-536SD)

1. Remove the finisher from the main body.
G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the front door.
G.8.16.2 Front door (FS-536/FS-536SD)
3. Remove the front upper cover.
G.8.16.3 Front upper cover (FS-536/FS-536SD)

4. To reinstall, reverse the order of removal.
8.16.15 Trailing edge stopper motor (M6) (FS-536/FS-536SD)
5. Remove the finisher from the main body.
G.8.16.6 Finisher (FS-536/FS-536SD)
6. Remove the front door.
G.8.16.2 Front door (FS-536/FS-536SD)
7. Remove the front upper cover. G.8.16.3 Front upper cover (FS-536/FS-536SD)

8. To reinstall, reverse the order of removal.

### 8.16.16 Alignment motor/front (M7) (FS-536/FS-536SD)

1. Remove the finisher from the main body.
G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the front door.
G.8.16.2 Front door (FS-536/FS-536SD)
3. Remove the front upper cover.
G.8.16.3 Front upper cover (FS-536/FS-536SD)

4. Disconnect the connector [1]
5. Remove the harness from the wire saddle [2]
6. Remove two screws [3] and remove the alignment motor/front assy [4].
7. Remove two screws [1] and remove the alignment motor/front [2].
[2]

[1]
8. To reinstall, reverse the order of removal.

### 8.16.17 Alignment motor/rear (M8) (FS-536/FS-536SD)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)

3. To reinstall, reverse the order of removal.

### 8.16.18 Pre-eject drive motor (M9) (FS-536/FS-536SD)

1. Remove the finisher from the main body.
G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.

4. Remove two screws [1], and remove the exit tray [2].
[1]
5. Remove four screws [1] and remove the plate [2].

[1]

[1] [3]

[2]
6. Disconnect two connectors [1]
7. Remove seven screws [2], and remove the left lower cover [3] NOTE

- Disconnect one connector when the saddle unit is not installed.

8. Disconnect the connector [1].
9. Remove seven screws [1], and remove the left upper cover [2].
10. Disconnect the connector [3].
11. Disconnect the connector [1].
12. Remove two screws [2], and remove the pre-eject drive motor assy [3].
[3]

13. Remove the rotating disk [1]
14. Remove two screws [2], and remove the pre-eject drive motor [3].
15. To reinstall, reverse the order of removal.

### 8.16.19 Bundle eject motor (M10) (FS-536/FS-536SD)

1. Remove the finisher from the main body.
G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.

[1]
4. Remove two screws [1], and remove the exit tray [2].
[1]

[1] [2]
5. Remove four screws [1] and remove the plate [2].
6. Disconnect two connectors [1].
7. Remove seven screws [2], and remove the left lower cover [3]. NOTE

- Disconnect one connector when the saddle unit is not installed.
[1]

[1] [2]

[2]

15. To reinstall, reverse the order of removal.

### 8.16.20 Main tray up/down motor (M11) (FS-536/FS-536SD)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)

3. To reinstall, reverse the order of removal.

### 8.16.21 Paper receiving control motor (M12) (FS-536/FS-536SD)

1. Remove the finisher from the main body.
G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.

[1]

4. Disconnect the connector [1], and remove the paper receiving control motor assy [2].
[2]

[1]
5. To reinstall, reverse the order of removal.

### 8.16.22 Side stapler movement motor (M13) (FS-536/FS-536SD)

1. Remove the finisher from the main body.
G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the rear cover.
G.8.16.1 Rear cover (FS-536/FS-536SD)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.
4. Disconnect the connector [1]
5. Remove two screws [2], and remove the side stapler movement motor [3].
6. To reinstall, reverse the order of removal.

### 8.17 Disassembly/reassembly procedure (FS-536SD saddle section)

8.17.1 Front cover (FS-536SD saddle section)

1. Remove the saddle unit Saddle unit (FS-536SD)
[2] [3]

[1] [3] [4]
2. Remove the screw [1], and remove the jam clearing dial [2].
3. Remove four screws [3], and remove the front cover [4].

## $\triangle$ CAUTION

- Be careful not to catch your finger in the edge of the rail when mounting the saddle unit on the right rail for the saddle unit installation.

## $\triangle$ CAUTION

## - Be careful not to jam your finger in the connecting section of the pantograph.

1. Remove the finisher G.8.16.6 Finisher (FS-536/FS-536SD)
2. Remove the front door of the finisher. G.8.16.2 Front door (FS-536/FS-536SD)

[1]
3. Remove the finisher left lower cover. Left lower cover (FS-536/FS-536SD)
4. Remove the finisher front upper cover.
G.8.16.3 Front upper cover (FS-536/FS-536SD)
5. Remove the finisher front lower cover.
G.8.16.5 Front lower cover (FS-536/FS-536SD)

[1]
6. Pull out the saddle unit [1].
7. Disconnect three connectors [1].
8. Remove the screw [1], and remove the pantograph [2].

[1]

[1]
9. NOTE

- For installation of the pantograph, insert three hooks [1] on the pantograph of the saddle unit into the back holes inside the finisher.

10. Remove the screw [1].
11. Push back the saddle unit into the position of the illustration, and then remove the screw [1].
12. Pull out the saddle unit, and then remove the screw [1].
13. Insert the rail [1] on the right side into the finisher.

[1]

14. To reinstall, reverse the order of removal.

### 8.17.3 Exit tray (FS-536SD saddle section)

14. Grip the portion [1] as shown in the illustration to raise the saddle unit and take it out.
NOTE

- For installation of the saddle unit, insert two hooks [3] on the left rail into two holes [2] of the saddle unit.

> 1. Remove the pin [1], and remove the exit lever [2].
2. Remove the exit tray [1].

3. To reinstall, reverse the order of removal.

### 8.17.4 Staple unit (FS-536SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover G.8.17.1 Front cover (FS-536SD saddle section)

3. Remove four screws [1], and remove the plate [2].
4. Remove three screws [1], and remove the tri-folding guide motor assy [2].
5. Remove four screws [1], and remove the conveyance assy [2].
6. Remove two screws [1], and remove the plate [2].
7. Remove two screws [1].
8. Detach the board support film [3] from the harness guide tabs [2].

[2]

### 8.17.5 SD control board (SDCB) (FS-536SD saddle section)

## 1. Remove the saddle unit.

Saddle unit (FS-536SD)

[3]
[1]

[2]

[1]

8. To reinstall, reverse the order of removal.

NOTE

- After replacing the SD control board, be sure to install the latest firmware.

### 8.17.6 SD transport motor (M1) (FS-536SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover. G.8.17.1 Front cover (FS-536SD saddle section)

## [2]

3. Disconnect the connector [1]
4. Remove two screws [2], and remove the SD transport motor [3].

5. To reinstall, reverse the order of removal

### 8.17.7 Paper discharge control motor (M2) (FS-536SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-536SD)
2. Remove the front cover.
G.8.17.1 Front cover (FS-536SD saddle section)

### 8.17.8 Alignment motor (M3) (FS-536SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-536SD)
2. Remove the front cover.
G.8.17.1 Front cover (FS-536SD saddle section)

3. Remove four screws [1], and remove the plate [2].

7. To reinstall, reverse the order of removal.

### 8.17.9 Stopper drive motor (M4) (FS-536SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-536SD)
2. Remove the front cover
G.8.17.1 Front cover (FS-536SD saddle section)

6. To reinstall, reverse the order of removal.

### 8.17.10 Center fold roller motor (M5) (FS-536SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-536SD)
[2] [3] [2]

[1]
2. Disconnect the connector [1].
3. Remove four screws [2], and remove the center fold roller motor [3].
4. To reinstall, reverse the order of removal.

### 8.17.11 Center fold guide motor (M6) (FS-536SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover.
G.8.17.1 Front cover (FS-536SD saddle section)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the center fold guide motor [3].
5. To reinstall, reverse the order of removal.
8.17.12 SD paddle motor (M7) (FS-536SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover. G.8.17.1 Front cover (FS-536SD saddle section)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the SD paddle motor assy [3].
5. NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

6. Remove two screws [1], and remove the SD paddle motor [2].
7. To reinstall, reverse the order of removal.

### 8.17.13 Tri-folding guide motor (M8) (FS-536SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-536SD)
2. Remove the front cover
G.8.17.1 Front cover (FS-536SD saddle section)
[2]

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the tri-folding guide motor [3].
5. To reinstall, reverse the order of removal.

### 8.17.14 Center fold knife motor (M9) (FS-536SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover.
G.8.17.1 Front cover (FS-536SD saddle section)

3. Remove six screws [1], and remove the plate [2].
4. Disconnect the connector [1].

5. Remove four screws [2], and remove the center fold knife motor [3].
6. To reinstall, reverse the order of removal.

### 8.17.15 Stopper solenoid (SD1) (FS-536SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-536SD)
2. Remove the front cover.
G.8.17.1 Front cover (FS-536SD saddle section)

3. Remove six screws [1], and remove the plate [2].
4. Place the saddle unit as shown in the illustration.

8. Raise the saddle unit.

[2]

[1]
[1]

5. Remove two stoppers [1], and remove the guide plate [2].
6. Slide the lever unit [3] upward.
7. Remove two screws [1] and disconnect the connector [2].
9. Disconnect the connector [1], and remove the harness from three wire saddles [2].
10. Disconnect the connector [1], and remove the drive lever [2].
11. Remove two screws [1].
12. Remove the guide plate assy [1].

## NOTE

- When reinstalling the guide plate assy, perform mechanical adjustment.
Half-fold skew adjustment

13. Remove four screws [1], and remove the plate [2].
14. Remove two E-rings [1], and remove the stopper guide [2].
15. NOTE

- When reinstalling the stopper guide, fit the belt into the stopper guide groove [1].

16. Remove the screw [1], and remove the plate [2].

17. Remove the screw [1].
18. Disconnect the connector [1], and remove the stopper solenoid [2].

NOTE

- When reinstalling the stopper solenoid, fit its tip into the place [3] shown in the illustration.

19. To reinstall, reverse the order of removal.

### 8.18 Disassembly/reassembly procedure (PK-520)

### 8.18.1 Punch kit (PK-520)

1. Remove the finisher from the main body. G.8.16.6 Finisher (FS-536/FS-536SD)

2. Remove the harness from the wire saddle [1].
3. Remove eight screws [2], and remove the rear cover [3].
4. Remove the harness from five wire saddles [1].
5. Disconnect the connector [1].

[1]

6. To reinstall, reverse the order of removal.

### 8.19 Disassembly/reassembly procedure (FS-537/FS-537SD)

### 8.19.1 Upper cover/1 (FS-537/FS-537SD)

[2]

1. Remove three caps [1] and three screws [2], then remove the upper cover/1 [3].
2. Reinstall the above parts following the removal steps in reverse.

### 8.19.2 Upper cover/2 (FS-537/FS-537SD)

1. Remove the upper cover/1.
G.8.19.1 Upper cover/1 (FS-537/FS-537SD)

2. Remove five caps [1] and five screws [2], then remove the upper cover/2 [3].
3. Reinstall the above parts following the removal steps in reverse.

### 8.19.3 Upper cover/3 (FS-537/FS-537SD)

1. Remove the upper cover/1.
G.8.19.1 Upper cover/1 (FS-537/FS-537SD)
2. Remove the upper cover/2.
G.8.19.2 Upper cover/2 (FS-537/FS-537SD)

3. Remove six screws [1], and remove the upper cover/3 [2].
4. Reinstall the above parts following the removal steps in reverse.

### 8.19.4 Rear cover (FS-537/FS-537SD)

1. Remove the finisher from the main body.
G.8.19.12 Finisher (FS-537/FS-537SD)

2. Remove the cable [1] at the back of the finisher from two wire saddles [2].
3. Remove seven screws [1], and remove the rear cover [2].
[2]

4. Reinstall the above parts following the removal steps in reverse.

### 8.19.5 Front door (FS-537/FS-537SD)

2. Reinstall the above parts following the removal steps in reverse.

### 8.19.6 Front upper cover (FS-537/FS-537SD)

1. Remove the front door.
G.8.19.5 Front door (FS-537/FS-537SD)

2. Reinstall the above parts following the removal steps in reverse.

### 8.19.7 Front lower cover (FS-537/FS-537SD)

1. Remove the front door.
G.8.19.5 Front door (FS-537/FS-537SD)
2. Remove six screws [1], and remove the front lower cover [2].

3. Reinstall the above parts following the removal steps in reverse.
8.19.8 Main tray (Paper exit lower tray) (FS-537/FS-537SD)

4. Remove two screws [1] and remove the main tray [2]. NOTE

- When installing the main tray, you must perform installation after mounting then main tray hooks [3] to the two depressions on the finisher.

2. Reinstall the above parts following the removal steps in reverse.

### 8.19.9 Sub tray (Paper exit upper tray) (FS-537/FS-537SD)

2. Reinstall the above parts following the removal steps in reverse.

## $\triangle$ CAUTION

- Always carry out this procedure while supporting the main tray with your hand since the main will strongly come down when you slide the coupling.

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the left lower cover.
G.8.19.11 Left lower cover (FS-537/FS-537SD)
[2]

[1]
3. Slide the gear coupling [1] to the right and lower the main tray [2] to the lowest level.
4. Remove the main tray.
G.8.19.8 Main tray (Paper exit lower tray) (FS-537/FS-537SD)

[1]

[^32]
### 8.19.11 Left lower cover (FS-537/FS-537SD)

1. Remove five screws [1], disconnect the connector [2], and remove the left lower cover [3].

## 2. NOTE

- Always perform the installation after mounting three hooks [4] of the left lower cover on the finisher plate.

[4]

3. Reinstall the above parts following the removal steps in reverse.

### 8.19.12 Finisher (FS-537/FS-537SD)

1. Open the front door of the finisher.

[1]
2. Remove the screw [1] and pull out the lever [2].

NOTE

- During installation, when the pulled out lever is pushed down, the finisher screw [3] must be inside the range of the lever installation hole [4].

4. Disconnect two connectors [1] and the cable tie insertion part [2].

5. To reinstall, reverse the order of removal.

### 8.19.13 Relay unit (FS-537/FS-537SD)

1. Remove the finisher from the main body. G.8.19.12 Finisher (FS-537/FS-537SD)

[1]
2. To reinstall, reverse the order of removal.

### 8.19.14 Sensor unit (FS-537/FS-537SD)

1. Remove the RU transport unit.
G.8.19.13 Relay unit (FS-537/FS-537SD)

2. To reinstall, reverse the order of removal.

### 8.19.15 Stapler unit (FS-537/FS-537SD)

1. Remove the rear cover. Rear cover (FS-537/FS-537SD)
2. Remove the front door.
G.8.19.5 Front door (FS-537/FS-537SD)
3. Remove the front lower cover.
G.8.19.7 Front lower cover (FS-537/FS-537SD)
4. Remove the connector [1] and remove the finisher [2] from the main body.
5. Remove two screws [1], and remove the RU transport unit [2].
6. Remove two screws [1], and remove the control panel left cover/1 [2].
7. Remove the harness from the wire saddle [1] and the edge cover [2].
8. Disconnect the connector [3].
9. Remove the screw [4], and remove the sensor unit [5].
10. Remove the stapler movement motor assy
G.8.19.30 Stapler movement motor (M19) (FS-537/FS-537SD)
[3] [4]

11. Rotate the stapler transfer dial [1] until the stapler [2] has been moved to the location shown in the figure (the location where the back-end stopper [3] does not interact with the clincher staple arm [4]).
12. Disconnect two connectors [1] and remove the harness from seven wire saddles [2].
13. Remove the harness from the wire saddle [1].
14. Remove two screws [1] from the front of the finisher and one screw [2] from the back of the finisher.
15. Remove the stapler assy [1] from the finisher.

NOTE

- While removing the stapler assy [1], be careful not to hit the stapler against the finisher frame.

10. Put the stapler assy [1] on a stable workbench.
11. Rotate the stapler transfer dial [2] until the stapler unit [3] has been moved to the near side [4].
12. Remove two screws [1], and remove the plate [2].
13. Flip the stapler assy [1] over.
14. Remove two E-rings [2] from the guide shafts.
15. Remove four white rollers [1] from the guide shaft [2].
[4]

[1] [2] [3] [1]
16. Disconnect two connectors [1] and remove the harness from the wire saddle [2] and harness guide [3].
17. Remove the stapler assy [4].
18. Remove four screws [1], and remove the stapler unit [2].
[2] [1]

19. Reinstall the above parts following the removal steps in reverse.

### 8.19.16 FS control board (FSCB) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)

4. Reinstall the above parts following the removal steps in reverse.
8.19.17 Bundle eject motor (M1) / Pre-eject drive motor (M2) / Stacker plate drive motor (M3) (FS-537/FS-537SD)

1. Remove the left upper cover.

Left upper cover (FS-537/FS-537SD)
2. Remove the main tray (paper exit lower tray).
G.8.19.8 Main tray (Paper exit lower tray) (FS-537/FS-537SD)
2. Disconnect all connectors on the FS control board.
3. Remove four screws [1], and remove the FS control board [2].

3. Disconnect the connector [1], and remove the harness from the edge cover [2] and the wire saddle [3].
4. Remove two screws [4], and remove the bundle eject motor [5].

5. Disconnect the connector [1].
6. Remove two screws [2], the E-ring [3], and the bushing [4], and remove the Pre-eject drive motor [5].
7. Disconnect the connector [1]
8. Remove two screws [2] and remove the stacker plate drive motor [3].
9. Reinstall the above parts following the removal steps in reverse.

### 8.19.18 Route change gate motor (M4) (FS-537/FS-537SD)

## 1. Remove the rear cover. <br> Rear cover (FS-537/FS-537SD)

2. Remove the harness from 12 wire saddles [1].
3. Disconnect five connectors [2].
4. Remove two screws [3] and remove the route change gate motor assy [4]. NOTE

- During installation, you must pass the metal plate [5] between the belt [6].
[1]

[2]

6. Reinstall the above parts following the removal steps in reverse.

### 8.19.19 Main tray up/down motor (M6) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)

2. When the saddle unit is attached, open the front door and pull out the saddle unit.
3. Remove two screws [1] and remove the metal plate [2].
4. Disconnect the connector [1].
5. Remove four screws [2] and remove the main tray up/down motor [3].
6. Reinstall the above parts following the removal steps in reverse.

### 8.19.20 Paddle up/down motor (M7) / Arm drive motor (M8) / FNS paddle motor (M9) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the upper cover/1.
G.8.19.1 Upper cover/1 (FS-537/FS-537SD)
3. Remove the upper cover/2.
G.8.19.2 Upper cover/2 (FS-537/FS-537SD)
4. Remove the upper cover/3.
G.8.19.3 Upper cover/3 (FS-537/FS-537SD)
5. Remove the front upper cover.
G.8.19.6 Front upper cover (FS-537/FS-537SD)
6. Remove the sub tray (paper exit upper tray). G.8.19.9 Sub tray (Paper exit upper tray) (FS-537/FS-537SD)

[1]

[1]

[2]
[2]

[1]
7. Remove nine screws [1], disconnect two connectors [2], and remove the metal plate [3].
8. Remove the transfer roller unit [1].
9. Remove the screw [1] and remove the sub tray full detection sensor/in (PS41) [2].
10. Remove the screw [1] and remove the sub tray full detection sensor/out (PS39) [2].

[2]

11. Remove four screws [1], remove the harness from three wire saddles [2], and remove the cover [3].
12. Remove four screws [1], disconnect two connectors [2], and remove the upper paddle unit [3].
13. Remove five screws [1] and remove the cover [2].

[1]
[2]

[3]

[1]

14. Disconnect the connector [1]
15. Disconnect the connector [2] and remove the harness from two edge covers [3].
16. Remove three screws [1] and remove the paddle up/down motor assy [2].
17. Remove two screws [1] and remove the paddle up/down motor [2].
18. Disconnect the connector [1]
19. Remove two screws [2] and remove the arm drive motor [3].
20. Disconnect the harness from five wire saddles [1], loosen the harness, and disconnect two connectors [2].

23. Reinstall the above parts following the removal steps in reverse.

### 8.19.21 Receiving roller retraction motor (M10) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the route change gate motor assy.
G.8.19.18 Route change gate motor (M4) (FS-537/FS-537SD)
3. Remove the FNS discharge motor assy.
G.8.19.28 FNS discharge motor (M17) (FS-537/FS-537SD)

4. Disconnect two connectors [1] and remove the harness from the wire saddle [2].
5. Remove two screws [3] and remove the receiving roller retraction motor assy [4].
6. Remove two screws [1], and remove the receiving roller retraction motor [2].

7. Reinstall the above parts following the removal steps in reverse.

### 8.19.22 Trail edge stopper motor/R (M11) (FS-537/FS-537SD)

1. Remove the rear cover. Rear cover (FS-537/FS-537SD)
2. Remove the front lower cover. G.8.19.7 Front lower cover (FS-537/FS-537SD)
3. Remove the left upper cover. Left upper cover (FS-537/FS-537SD)
4. Remove the main tray (paper exit lower tray). G.8.19.8 Main tray (Paper exit lower tray) (FS-537/FS-537SD)

[1]

5. Rotate the stapler transfer dial [2] to move the stapler [1] towards the rear until the dial stops.
NOTE

- If the stapler rotated (tilted) at the rear of the finisher, move it forward until it becomes straight and again move it backward.

6. Disconnect two connectors [1] and remove the harness from the wire saddle [2].
7. Disconnect three connectors [1] and remove the harness from four wire saddles [2].

## 9. NOTE

- During installation, place the metal plate part [3] shown in the illustration on top of the dowel [4].

10. Remove the alignment motor/rear. G.8.19.24 Alignment motor/rear (M13) (FS-537/FS-537SD)

11. Remove the harness from the wire saddle [1].
12. Remove two screws [2] and remove the alignment plate [3]. NOTE

- When removing, be careful not to drop the alignment plate.

## [3]

[1]
[2]

[1]
[2]

[1]

[1]
13. NOTE

- During the procedure, be careful not to bend the plate [1] and the mylar [2].

14. Disconnect the connector [1] and remove two screws [2].
15. Remove four screws [1], remove the belt [3] while sliding the metal plate [2] then remove the trail edge stopper motor/R [4]. NOTE

- Place the belt [3] on the gear during installation.

16. Reinstall the above parts following the removal steps in reverse.

### 8.19.23 Trail edge stopper motor/F (M12) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the front lower cover.
G.8.19.7 Front lower cover (FS-537/FS-537SD)
3. Remove the left upper cover.

Left upper cover (FS-537/FS-537SD)
4. Remove the main tray (paper exit lower tray).
G.8.19.8 Main tray (Paper exit lower tray) (FS-537/FS-537SD)

5. Rotate the stapler transfer dial [2] to move the stapler [1] towards the rear until the dial stops.
NOTE

- If the stapler rotated (tilted) at the rear of the finisher, move it forward until it becomes straight and again move it backward.

6. Disconnect two connectors [1] and remove the harness from the wire saddle [2].

## 7. Disconnect three connectors [1] and remove the harness from four wire saddles [2].

8. Remove eight screws [1] and remove the paper exit part [2].

- During installation, place the plate [3] part shown in the illustration on top of the dowel [4].

10. Remove the alignment motor/front.
G.8.19.25 Alignment motor/front (M14) (FS-537/FS-537SD)

[2]

[1]
[2]

[1]
11. Remove the harness from the wire saddle [1].
12. Remove two screws [2] and remove the alignment plate [3]. NOTE

- When removing, be careful not to drop the alignment plate.

13. NOTE

- During the procedure, be careful not to bend the plate [1] and the mylar [2].

14. Disconnect the connector [1] and remove two screws [2].

15. Remove four screws [1], remove the belt [3] while sliding the metal plate [2] then remove the trail edge stopper motor/F [4].
NOTE

- Place the belt [3] on the gear during installation.

16. Reinstall the above parts following the removal steps in reverse.

### 8.19.24 Alignment motor/rear (M13) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)

2. Disconnect the connector [1]
3. Remove two screws [2], and remove the alignment motor/rear assy [3].
4. Remove two screws [1], and remove the alignment motor/rear [2].

5. Reinstall the above parts following the removal steps in reverse.
8.19.25 Alignment motor/front (M14) (FS-537/FS-537SD)

1. Remove the front lower cover.
G.8.19.7 Front lower cover (FS-537/FS-537SD)

2. Remove two screws [1] and the connector [2], then remove the alignment motor/front assy [3].
[2]

[1]
3. Reinstall the above parts following the removal steps in reverse.

### 8.19.26 Paper receiving control motor (M15) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the left upper cover.

Left upper cover (FS-537/FS-537SD)
[3]

[1]

[2]
3. Remove two screws [1] and the connector [2], then remove the paper receiving control motor assy [3].
4. Remove two screws [1], and remove the paper receiving control motor [2].
5. Reinstall the above parts following the removal steps in reverse.

### 8.19.27 SD discharge motor (M16) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the ZU discharge motor assy.
G.8.19.32 ZU Discharge Motor (M21) (FS-537/FS-537SD)

[2]

[1]
7. To reinstall, reverse the order of removal.

### 8.19.28 FNS discharge motor (M17) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)
2. Remove the route change gate motor assy.
G.8.19.18 Route change gate motor (M4) (FS-537/FS-537SD)
3. Disconnect the connector [1].

4. Remove three screws [2], and remove the FNS discharge motor assy [3].
6. Remove two screws [1], and remove the SD discharge motor [2].
5. Remove two screws [1], and remove the FNS discharge motor [2].

6. Reinstall the above parts following the removal steps in reverse.

### 8.19.29 Sub tray discharge motor (M18) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)

[^33]3. Disconnect the connector [1]
4. Remove three screws [2] and remove the sub tray discharge motor assy [3]
5. Remove four screws [1], and remove the plate [2].
6. Remove the E-ring [1].

[1]
[3]

[1]
[2]
7. Remove the gear [1] and pin [2], and remove the sub tray discharge motor [3].
8. Reinstall the above parts following the removal steps in reverse.

### 8.19.30 Stapler movement motor (M19) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)

[1]
2. Disconnect the connector [1].
3. Remove three screws [2] and remove the stapler movement motor assy [3].
4. Remove the E-ring [1].

5. Remove the gear [1] and pin [2], then remove the stapler movement motor [3].

6. Reinstall the above parts following the removal steps in reverse.

### 8.19.31 FNS entry transport motor (M20) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)

2. Disconnect the connector [1].
3. Remove four screws [2], and remove the FNS entry transport motor assy [3].
4. Remove four screws [1] and remove the metal plate [2].
5. Remove the E-ring [1].

[1]
[3]

[1] [2]
7. Reinstall the above parts following the removal steps in reverse.

### 8.19.32 ZU Discharge Motor (M21) (FS-537/FS-537SD)

1. Remove the rear cover.

Rear cover (FS-537/FS-537SD)

[1]

4. Remove four screws [1] and remove the metal plate [2].
5. Remove the E-ring [1].
6. Remove the flange [1], gear [2], and pin [3], the remove the ZU discharge motor [4].
7. Reinstall the above parts following the removal steps in reverse.

### 8.20 Disassembly/reassembly procedure (FS-537SD saddle section)

8.20.1 Front cover (FS-537SD saddle section)
[2] [3]

[1] [3] [4]

1. Remove the screw [1], and remove the jam clearing dial [2]
2. Remove four screws [3], and remove the front cover [4].
3. To reinstall, reverse the order of removal.

### 8.20.2 Saddle unit (FS-537SD saddle section)

## $\triangle$ CAUTION

- Be careful not to catch your finger in the edge of the rail when mounting the saddle unit on the right rail for the saddle unit installation.

## $\triangle$ CAUTION

- Be careful not to jam your finger in the connecting section of the pantograph.

1. Remove the finisher from the main body G.8.19.12 Finisher (FS-537/FS-537SD)
2. Remove the front door of the finisher. G.8.19.5 Front door (FS-537/FS-537SD)
3. Remove the finisher front lower cover.
G.8.19.7 Front lower cover (FS-537/FS-537SD)
[3]

[1]

[1]
4. Disconnect three connectors [1] on the pantograph.
5. Remove the screw [2] and remove the pantograph [3].

## 6. NOTE

- For installation of the pantograph, insert three hooks [1] on the pantograph of the saddle unit into the back holes inside the finisher.

7. Remove the screw [1].
8. Push back the saddle unit into the position of the illustration, and then remove the screw [1].
9. Pull out the saddle unit and remove the screw [1].

10. To reinstall, reverse the order of removal.

### 8.20.3 Exit tray (FS-537SD saddle section)

[1]

[3]
[1]

[4]
10. Place the right rail [2] to inside the finisher while holding the saddle unit in the section indicated in the figure [1] and raising it.
NOTE

- Place the boss [3] of the saddle unit into the hole in the right rail when installing the saddle unit.

11. Remove the saddle unit [2] from two tabs [1].
12. Remove five screws [1]
13. Disconnect the connector [2] and remove the left lower cover [3].

## 3. NOTE

- Install after hooking three tabs [4] of the left lower cover when installing.

6. To reinstall, reverse the order of removal.

### 8.20.4 Staple unit (FS-537SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover
G.8.20.1 Front cover (FS-537SD saddle section)

4. Remove four screws [1].
5. Disconnect the connector [2] and remove the exit tray [3]
3. Remove four screws [1], and remove the plate [2].
4. Remove three screws [1], and remove the tri-folding guide motor assy [2].
5. Remove four screws [1], and remove the conveyance assy [2].
[2]

[1]
[3]
[1]

[2]

[2]

[1]

## [1]

6. Remove two screws [1], and remove the plate [2].
7. Remove two screws [1].
8. Detach the board support film [3] from the harness guide tabs [2].
9. Remove the harness from the wire saddle [1].
10. Disconnect the connector [2].
11. Remove four screws [3] and remove the SD control board assy [4].
12. Remove two screws [1], and remove the plate [2].
13. Remove the screw [1].
14. Release two tabs [2], and remove the cover [3].
15. Disconnect the connector [1].

16. Remove two screws [1], and remove the staple unit [2].

[2]
17. To reinstall, reverse the order of removal.
8.20.5 SD control board (SDCB) (FS-537SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)

[2]
[1]

[1]

8. To reinstall, reverse the order of removal

NOTE

- After replacing the SD control board, be sure to install the latest firmware.

### 8.20.6 SD transport motor (M1) (FS-537SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover G.8.20.1 Front cover (FS-537SD saddle section)
[2]

[3]
[1]
3. Disconnect the connector [1]
4. Remove two screws [2], and remove the SD transport motor [3].
5. To reinstall, reverse the order of removal.

### 8.20.7 Paper discharge control motor (M2) (FS-537SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)

$$
[3][2][1]
$$

[4]
5. To reinstall, reverse the order of removal.

### 8.20.8 Alignment motor (M3) (FS-537SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)

4. Remove four screws [1], and remove the plate [2].

7. To reinstall, reverse the order of removal.

### 8.20.9 Stopper drive motor (M4) (FS-537SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)

3. Remove six screws [1], and remove the plate [2].
4. Disconnect the connector [1]
[2]

5. Remove two screws [2], and remove the stopper drive motor [3].
6. To reinstall, reverse the order of removal.

### 8.20.10 Center fold roller motor (M5) (FS-537SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-537SD saddle section)

4. To reinstall, reverse the order of removal.

### 8.20.11 Center fold guide motor (M6) (FS-537SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover G.8.20.1 Front cover (FS-537SD saddle section)
[2]
3. Disconnect the connector [1]
4. Remove two screws [2] and remove the center fold guide motor [3].

[1]
[3]
5. To reinstall, reverse the order of removal.

### 8.20.12 SD paddle motor (M7) (FS-537SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)

3. Disconnect the connector [1]
4. Remove two screws [2], and remove the SD paddle motor assy [3].

## 5. NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

6. Remove two screws [1], and remove the SD paddle motor [2].

[2]
7. To reinstall, reverse the order of removal.
8.20.13 Tri-folding guide motor (M8) (FS-537SD saddle section)
8. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)
[2]

[3]
[1]
5. To reinstall, reverse the order of removal.

### 8.20.14 Center fold knife motor (M9) (FS-537SD saddle section)

1. Remove the saddle unit

Saddle unit (FS-537SD saddle section)
2. Remove the front cover.
G.8.20.1 Front cover (FS-537SD saddle section)

3. Remove six screws [1], and remove the plate [2].
3. Disconnect the connector [1].
4. Remove two screws [2], and remove the tri-folding guide motor [3].

6. To reinstall, reverse the order of removal.

### 8.20.15 Paper transport belt motor (M34) (FS-537SD saddle section)

1. Remove the exit tray.
G.8.20.3 Exit tray (FS-537SD saddle section)

## [1]

[2]
2. Remove two screws [1], and remove the cover [2].
[2]

3. Disconnect the connector [1]
4. Remove four screws [2] and remove the paper transport belt motor [3].
5. To reinstall, reverse the order of removal.

### 8.20.16 Stopper solenoid (SD1) (FS-537SD saddle section)

1. Remove the saddle unit.

Saddle unit (FS-537SD saddle section)
2. Remove the front cover
G.8.20.1 Front cover (FS-537SD saddle section)

3. Remove six screws [1], and remove the plate [2].
4. Place the saddle unit as shown in the illustration.

5. Remove two stoppers [1], and remove the guide plate [2]

6. Slide the lever unit [3] upward.
7. Remove two screws [1] and disconnect the connector [2].
9. Disconnect the connector [1], and remove the harness from three wire saddles [2].
10. Disconnect the connector [1], and remove the drive lever [2].
11. Remove two screws [1]
12. Remove the guide plate assy [1]

NOTE

- When reinstalling the guide plate assy, perform mechanical adjustment.
Half-fold skew adjustment
[1]

[1]

[1]

[1]

[2]
[1]

13. Remove four screws [1], and remove the plate [2].
14. Remove two E-rings [1], and remove the stopper guide [2].

## 15. NOTE

- When reinstalling the stopper guide, fit the belt into the stopper guide groove [1].

16. Remove the screw [1], and remove the plate [2].
17. Remove the screw [1].

18. To reinstall, reverse the order of removal.

### 8.21 Disassembly/reassembly procedure (PK-523)

### 8.21.1 Punch Kit (PK-523)

1. Remove the finisher from the main body.
G.8.19.12 Finisher (FS-537/FS-537SD)
2. Open the finisher front door.

3. Remove three screws [1] and remove the cover [2].
4. Remove the punch disposal box [1].
5. Remove the screw [1], and remove the plate [2].

6. Remove the rear cover of the finisher. Rear cover (FS-537/FS-537SD)

7. Remove four screws [1] and remove the plate [2].
8. Remove two screws [1] and remove the board cover [2].
9. Disconnect three connectors [1].
10. Remove the harness from two wire saddles [2] and the clamp [3].
11. Remove the harness from harness guide [1]
12. Remove the harness from five wire saddles [2]. NOTE

- Place the harness clamp [3] between the two top wire saddles when installing.

13. Disconnect the connector [1].

14. Remove the punch kit [1] by pulling it out from the finisher main unit.

[1]
15. To reinstall, reverse the order of removal.

NOTE
If the paper jam error around the punch unit is displayed on the control panel when turning on the machine after installing the finisher, check the following:

- No paper pieces are left on the paper path.
- Execute the [ Punch F. Sensor Intensity Adj. ]. After the adjustment, open and close the front door of the finisher to confirm that the JAM displays disappear.
- Before turning OFF the main power switch, wait at least 10 seconds after the JAM displays disappear.

### 8.21.2 Punch control board (PKCB) (PK-523)

1. Remove the finisher from the main body.
G.8.19.12 Finisher (FS-537/FS-537SD)
2. Disconnect seven connectors [1] on the punch control board.
3. Remove five screws [2], and remove the punch control board [3].

4. Reinstall the above parts following the removal steps in reverse.
8.21.3 Paper size detect board (PSDTB) (PK-523)
5. Remove the punch kit.

Punch Kit (PK-523)
2. Remove the E-ring [1] and pull out the punch oscillating section [2].

[2]
[1]

[3]

[1]
3. Remove three screws [1] and remove the board protective shield [2].
4. Remove two screws [1], disconnect the connector [2], and remove the paper size detect board [3].
5. To reinstall, reverse the order of removal.

NOTE
If the paper jam error around the punch unit is displayed on the control panel when turning on the machine after installing the finisher, check the following:

- No paper pieces are left on the paper path
- Execute the [ Punch F. Sensor Intensity Adj. ]. After the adjustment, open and close the front door of the finisher to confirm that the JAM displays disappear.
- Before turning OFF the main power switch, wait at least 10 seconds after the JAM displays disappear.

### 8.21.4 Punch oscillating motor (M302) (PK-523)

1. Remove the punch kit.

Punch Kit (PK-523)

2. Disconnect the connector [1]
3. Remove two screws [2] and remove the punch oscillating motor [3].
4. Remove the E-ring [1], and remove the gear [2] NOTE

- Take care not to lose the pin.

5. Remove two screws [3] and remove the plate [4].
6. To reinstall, reverse the order of removal.

NOTE
If the paper jam error around the punch unit is displayed on the control panel when turning on the machine after installing the finisher, check the following:

- No paper pieces are left on the paper path
- Execute the [ Punch F. Sensor Intensity Adj. ]. After the adjustment, open and close the front door of the finisher to confirm that the JAM displays disappear.
- Before turning OFF the main power switch, wait at least 10 seconds after the JAM displays disappear.

### 8.22 Disassembly/reassembly procedure (ZU-609)

### 8.22.1 Z Folding Unit (ZU-609)

1. Remove the finisher from the main body. G.8.19.12 Finisher (FS-537/FS-537SD)
2. Remove the rear cover of the finisher.

Rear cover (FS-537/FS-537SD)

3. Disconnect the connector [1] and pull out the harness from the harness guide [2].
4. Disconnect four connectors [1] and remove the harness from the harness guide [2].
6. If the metal plate [1] is attached, remove two screws [2] to remove the metal plate [1].

12. To reinstall, follow the removal procedure backwards. 13. NOTE

Take note of the following when installing:
8. Open the three ([1]/[2]/[3]) jam removal levers.

## 9. NOTE

- If the lever does not open because the stapler [1] is being blocked, rotate the stapler transfer dial [2] and move the stapler [1] towards the rear until the dial stops.
- If the stapler rotated (tilted) at the rear of the finisher, move it forward until it becomes straight and again move it backward.

10. Remove two screws [1]
11. Remove the $Z$ folding unit [2] from the finisher by lifting it a little with the shaft lever [1] of the lower part of the $Z$ folding unit slided upper left.

- If the jam removal lever [1] of $\mathbf{Z}$ folding unit is not in the position shown in the illustration, pull the lever to set to the position shown in the illustration.

14. NOTE

- Do not make the lever [1] caught on the lower frame [2] of the finisher opening.
- Put the upper resin part [3] of the $Z$ folding unit on the rail [4] of the finisher opening.

15. NOTE

- Hold up the Z folding unit [2] a little to insert further, with the shaft lever [1] on the lower part of the $\mathbf{Z}$ folding unit slided to the upper left.

8.22.2 ZU drive board (ZUDB) (ZU-609)

1. Remove the finisher from the main body.
G.8.19.12 Finisher (FS-537/FS-537SD)
2. Remove the rear cover of the finisher.

Rear cover (FS-537/FS-537SD)

3. Disconnect five connectors [1] on the ZU drive board.
4. Remove the screw [2] and three board supports [3], then remove the ZU drive board [4].
5. Reinstall the above parts following the removal steps in reverse.

### 8.22.3 ZU relay board (ZURB) (ZU-609)

1. Remove the finisher sub tray (paper exit upper tray).
G.8.19.9 Sub tray (Paper exit upper tray) (FS-537/FS-537SD)

2. Remove the screw [1], and remove the cover [2].

3. Reinstall the above parts following the removal steps in reverse.

### 8.22.4 ZU transport motor (M500) (ZU-609)

1. Remove the finisher from the main body.
G.8.19.12 Finisher (FS-537/FS-537SD)
2. Remove the rear cover of the finisher.

Rear cover (FS-537/FS-537SD)
3. Disconnect the connector [1].
[2] [1]

4. Remove four screws [2] and remove the ZU transport motor [3].
5. Reinstall the above parts following the removal steps in reverse.

### 8.22.5 Folding guide motor (M501) (ZU-609)

1. Remove the $Z$ folding unit.

Z Folding Unit (ZU-609)

2. Disconnect the connector [1]
3. Remove two screws [2] and remove the folding guide motor [3]
2. Disconnect the connector [1]
3. Remove two screws [1] and remove the pressure motor [2].

4. Reinstall the above parts following the removal steps in reverse.

### 8.23 Disassembly/reassembly procedure (JS-602)

### 8.23.1 Paper exit tray (JS-602)

1. Remove the paper exit tray [1].

2. Reinstall the above parts following the removal steps in reverse.

### 8.23.2 Front cover (JS-602)

1. Remove the paper exit tray.
G.8.23.1 Paper exit tray (JS-602)
[2]

[1]

2. To reinstall, reverse the order of removal.

### 8.23.3 Rear cover (JS-602)

1. Remove the paper exit tray. G.8.23.1 Paper exit tray (JS-602)

[2]

[1]
[2] [1]

[1]
2. To reinstall, reverse the order of removal.
3. Pull the unlock lever [1] and open the upper door [2].
4. Remove three tabs [1] and remove the front cover [2].
5. Remove the tab [1] and remove the spacer [2].
6. Pull the unlock lever [1] and open the upper door [2].
7. Remove three tabs [1] and remove the rear cover [2].

### 8.23.4 Job separator (JS-602)

1. Remove the paper exit tray. G.8.23.1 Paper exit tray (JS-602)
2. Remove the front cover.
G.8.23.2 Front cover (JS-602)
3. Remove the rear cover. G.8.23.3 Rear cover (JS-602)
4. Remove two screws [1], disconnect the connector [2], and remove the job separator [3].

### 8.23.5 Entrance switching solenoid (SD401) (JS-602)

1. Remove the rear cover.
G.8.23.3 Rear cover (JS-602)

2. Remove the harness from the wire saddle [1] and the edge cover [2]. 3. Disconnect the connector [3].
3. Remove the screw [1] and remove the entrance switching solenoid [2].

[1]
4. To reinstall, reverse the order of removal.

### 8.24 Disassembly/reassembly procedure (PI-507)

### 8.24.1 Upper cover (PI-507)

3. To reinstall, reverse the order of removal.

### 8.24.2 Rear cover (PI-507)

1. Remove the upper cover.
G.8.24.1 Upper cover (PI-507)

2. To reinstall, reverse the order of removal.

### 8.24.3 Operation panel cover assy (PI-507)

1. Remove the upper cover.
G.8.24.1 Upper cover (PI-507)

2. To reinstall, reverse the order of removal.

### 8.24.4 Post Inserter (PI-507)

1. Remove the cap [1]
2. Remove four screws [2] and remove the upper cover [3].
3. Remove the screw [1], and remove the connector cover [2].
4. Remove three screws [3], and remove the rear cover [4].
5. Remove two screws [1], disconnect the connector [2], and remove the operational panel cover assy [3].
[1]

[2]

[1]
6. Open the finisher front door

7. Remove the screw [1], and remove the connector cover [2].
8. Remove the screw [1], and remove the cover [2].
9. Remove three screws [1].
10. Disconnect the connector [1].

11. To reinstall, reverse the order of removal.
12. Remove the post inserter [1] by shifting it toward the direction of the arrow. NOTE

- Install the post inserter so it is hooked to the positioning screw [2] attached to the finisher.

### 8.24.5 PI drive board (PIDB) (PI-507)

1. Remove the rear cover.
G.8.24.2 Rear cover (PI-507)

[1]

2. To reinstall, reverse the order of removal.

### 8.24.6 PI operation board (PIOB) (PI-507)

1. Remove the operation panel cover assy. G.8.24.3 Operation panel cover assy (PI-507)

[2]
2. To reinstall, reverse the order of removal.

### 8.24.7 PI relay board (PIRB) (PI-507)

- The removal process of the PI relay board (PIRB) is the same as the removal process of the ZU drive board (ZUDB) of the $Z$ fold unit ZU-609. Refer to the removal process of the ZU drive board (ZUDB) ZU drive board (ZUDB) (ZU-609)

### 8.24.8 Tray lift motor /Lw (M202) (PI-507)

1. Remove the transfer motor (M203).
G.8.24.9 Transfer motor (M203) (PI-507)

2. Disconnect the connector [1].
3. Remove four screws [2] and slide the metal plate [3]. NOTE

- Place the belt [4] on the gear [5] during installation.

4. Remove the screw [1] and remove the tray lift motor /Lw assy [2].
[2]

[2]

[1]
5. Remove two screws [1] and remove the tray lift motor /Lw [2].
6. Reinstall the above parts following the removal steps in reverse.

### 8.24.9 Transfer motor (M203) (PI-507)

1. Remove the post-inserter.
G.8.24.4 Post Inserter (PI-507)
2. Remove the rear cover.
G.8.24.2 Rear cover (PI-507)
[1]

[2]

3. Remove five screws [1].
4. Disconnect 10 connectors [1].
5. Remove six wire saddles [2] and remove the harness from the two harness guides [3]
[2]

[1]
[2]

[3] [2]
[1]
6. Reinstall the above parts following the removal steps in reverse.

### 8.24.10 Transport roller drive motor (M204) (PI-507)

- Removing the transport roller drive motor (M204) is the same as removing the ZU transport motor (M500) of the Z fold unit ZU-609. Refer to the method of removing the ZU transport motor (M500).
ZU transport motor (M500) (ZU-609)

### 8.24.11 Folding guide motor (M501) (PI-507)

- Removing the folding guide motor (M501) is the same as removing the folding guide motor (M501) of the Z fold unit ZU-609. Refer to the method of removing the folding guide motor (M501).
G.8.22.5 Folding guide motor (M501) (ZU-609)

### 8.24.12 Transfer clutch /Lw (CL202) (PI-507)

1. Remove the post-inserter. G.8.24.4 Post Inserter (PI-507)
2. Remove the rear cover. G.8.24.2 Rear cover (PI-507)
[1]

[2]

[1]

[1]

3. Pull the unlock lever [1] and open the upper door [2].
4. Remove five screws [1].
5. Disconnect 10 connectors [1]
6. Remove six wire saddles [2] and remove the harness from two harness guides [3].

## [2]

[2]

7. Unhook three wire saddle hooks [1] and remove the metal plate [2].
8. Remove the E-ring [1] and remove the transfer clutch /Lw [2]. NOTE

- During installation, always fit the depressed part of the transfer clutch [3] into the groove of the metal plate.

9. Reinstall the above parts following the removal steps in reverse.

### 8.24.13 Registration clutch (CL203) (PI-507)

1. Remove the post-inserter.
G.8.24.4 Post Inserter (PI-507)
2. Remove the rear cover. G.8.24.2 Rear cover (PI-507)
[1]

[2]

[1]

[2]

[1]
[1]

[1]
[2]
3. Remove five screws [1].
4. Disconnect 10 connectors [1].
5. Remove six wire saddles [2] and remove the harness from two harness guides [3].
6. Unhook three wire saddle hooks [1] and remove the metal plate [2].
7. Remove two screws [1] and remove the metal plate [2].

NOTE

- During installation, always fit the depressed part of the registration clutch [3] into the groove of the metal plate.
[2]
[1]

10. Reinstall the above parts following the removal steps in reverse.

### 8.24.14 Pick-up solenoid /Lw (SD202) (PI-507)

1. Remove the post-inserter.
G.8.24.4 Post Inserter (PI-507)
2. Remove the control panel cover assy.

## G.8.24.3 Operation panel cover assy (Pl-507)

3. Disconnect the connector [1], remove two screws [2], and remove Pick-up solenoid /Lw assy [3].
4. Remove two screws [1] and remove the pick-up solenoid /Lw [2].
9. Remove the E-ring [1], and remove the registration clutch [2].

]

[1]

5. Reinstall the above parts following the removal steps in reverse.

### 8.25 Disassembly/reassembly procedure (RU-513)

### 8.25.1 RU transport motor (M1)

1. Remove the finisher from the main body
G.8.14.6 Finisher (FS-534/FS-534SD)
G.8.16.6 Finisher (FS-536/FS-536SD)
G.8.19.12 Finisher (FS-537/FS-537SD)
2. Remove the RU transport unit.
G.8.14.7 Relay unit (RU-513)
G.8.16.7 Relay unit (FS-536/FS-536SD)
G.8.19.13 Relay unit (FS-537/FS-537SD)
[1]

[2]
3. Remove three screws [1], and remove the rear cover [2] of the RU transport unit.
4. Remove the harness from two wire saddles [1].
5. Disconnect the connector [2].

6. Remove four screws [1], and remove the RU transport motor assy [2].
7. Remove two screws [1], and remove the RU transport motor [2].
[2]

8. To reinstall, reverse the order of removal

### 8.26 Disassembly/reassembly procedure (OT-506)

### 8.26.1 Paper exit tray

1. Remove the paper exit tray [1]

2. To reinstall, reverse the order of removal.

### 8.27 Disassembly/reassembly procedure (SC-508)

### 8.27.1 DSC board/1 (for front side) (SC-508) (bizhub C368/C308/C258)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the DSC board/2. (Option)
G.8.27.2 DSC board/2 (for back side) (SC-508) (bizhub C368/C308/C258)
3. Remove the dual scan image processing board. (Option)
G.8.4.11 dual scan image processing board (DSIPB) (DF-704)

4. To reinstall, reverse the order of removal.

### 8.27.2 DSC board/2 (for back side) (SC-508) (bizhub C368/C308/C258)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover

2. To reinstall, reverse the order of removal.

### 8.27.3 DSC board/1 (for front side) (SC-508) (bizhub C658/C558/C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter.
F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield.
G.6.2.26 Protective shield
5. Remove the DSC board/2. (Option)
G.8.27.4 DSC board/2 (for back side) (SC-508) (bizhub C658/C558/C458)
6. Remove the dual scan image processing board.
G.6.4.13 Dual scan image processing board (DSIPB)
[2]

7. To reinstall, reverse the order of removal.

### 8.27.4 DSC board/2 (for back side) (SC-508) (bizhub C658/C558/C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield

## [2]

[^34]6. To reinstall, reverse the order of removal.

### 8.28 Disassembly/reassembly procedure (UK-211)

### 8.28.1 Upgrade kit (UK-211)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
[1]

2. To reinstall, reverse the order of removal.

### 8.29 Disassembly/reassembly procedure (UK-212)

### 8.29.1 Upgrade kit (UK-212) (bizhub C368/C308/C258)

1. Remove the rear right cover. G.5.2.18 Rear right cover

2. Remove the harness from the edge cover [1], and disconnect two connectors [2].
3. Remove two screws [3], and remove the upgrade kit [4].
4. To reinstall, reverse the order of removal.

### 8.29.2 Upgrade kit (UK-212) (bizhub C658/C558/C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover
4. Remove the protective shield. G.6.2.26 Protective shield
5. Remove the DF cable cover. G.6.2.22 DF cable cover
6. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
7. Remove the paper cooling fan assy. G.6.7.7 Paper cooling fan (FM8)
8. Remove the rear right cover.
G.6.2.19 Rear right cover

9. Remove the harness from the edge cover [1], and disconnect two connectors [2].
10. Remove two screws [3], and remove the upgrade kit [4].
11. To reinstall, reverse the order of removal.

### 8.30 Disassembly/reassembly procedure (UK-215)

### 8.30.1 Upgrade kit (UK-215) (bizhub C368/C308/C258)

1. Remove the rear right cover.
G.5.2.18 Rear right cover

2. Remove the harness from the edge cover [1], and disconnect two connectors [2].
3. Remove two screws [3], and remove the upgrade kit [4].
4. To reinstall, reverse the order of removal.

### 8.30.2 Upgrade kit (UK-215) (bizhub C658/C558/C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover
4. Remove the protective shield G.6.2.26 Protective shield
5. Remove the DF cable cover. G.6.2.22 DF cable cover
6. Remove the scanner rear cover. G.6.2.1 Scanner rear cover
7. Remove the paper cooling fan assy.
G.6.7.7 Paper cooling fan (FM8)
8. Remove the rear right cover. G.6.2.19 Rear right cover

9. Remove the harness from the edge cover [1], and disconnect two connectors [2].
10. Remove two screws [3], and remove the upgrade kit [4].
11. To reinstall, reverse the order of removal.

### 8.31 Disassembly/reassembly procedure (FK-515)

### 8.31.1 FAX board (line 3), FAX board (line 4) (FK-515)

NOTE

- When removing the FAX Kit, make sure of the correct line associated with the FAX Kit to be removed before removing the line.
- When installing a new board, check the FAX board switch and make settings involving the line settings.

[1]<Line4>

### 8.32 Disassembly/reassembly procedure (FK-514)

### 8.32.1 FAX Kit (Line1), FAX Kit (Line2) (FK-514)

## NOTE

- Following describe the procedure to be followed when removing the FAX Kit (Line 1) and FAX Kit (Line 2) at the same time. When removing the FAX Kit, make sure of the correct line associated with the FAX Kit to be removed before removing the line.
- When installing a new board, check the FAX board switch and make settings involving the line settings.

1. Open the cover [1].

2. Disconnect the modular cable [1], and remove the modular cable from the guide [2].
3. NOTE

If there is a ferrite core attached to the modular cable when it is installed, follow the instructions and attach a ferrite core to the modular cable.

- Line 1 (LINE): Hook the cable onto the cable hook [1], and align the protrusion [2] between the ferrite core and cable.

4. NOTE

If there is a ferrite core attached to the modular cable when it is installed, follow the instructions and attach a ferrite core to the modular cable.

- Line 1 (TEL): Align the protrusion [1] between the ferrite core and cable, and place the ferrite core on the mounting seat [2].

5. NOTE

If there is a ferrite core attached to the modular cable when it is installed, follow the instructions and attach a ferrite core to the modular cable.

- Line 2 (LINE): Align the protrusion [1] between the ferrite core and cable.

6. Remove the screw [1], and remove the connector cover [2]. NOTE

- When installing the connector cover, insert the protrusion [3] on the connector cover into the holes [4] by taking care not to trap the harness.

11. To reinstall, reverse the order of removal.

### 8.32.2 FAX Kit (Line1), FAX Kit (Line2) (FK-514) (with MK-742)

NOTE

- Following describe the procedure to be followed when removing the FAX Kit (Line 1) and FAX Kit (Line 2) at the same time. When removing the FAX Kit, make sure of the correct line associated with the FAX Kit to be removed before removing the line.
- When installing a new board, check the FAX board switch and make settings involving the line settings.

[1]<Line4>

2. Remove seven screws [1], and remove the cover [2].
3. Remove the USB cable and harness from the wire saddle [1].

4. Disconnect two connectors [1] of the Line 2 .
5. Remove the harness and USB cable from the cut-out section [2] in the cover
6. Disconnect two connectors [1] from Line 1 .
7. Remove the harness and USB cable from the cut-out section [2] in the cover
8. Remove the screw [1], and remove the connector cover [2].

## NOTE

- When installing the connector cover, insert the protrusion [3] on the connector cover into the holes [4] by taking care not to trap the harness.

9. Remove two screws [1], and remove the Fax Kit (Line1) [2].
10. Remove two screws [3], and remove the Fax Kit (Line2) [4].
11. To reinstall, reverse the order of removal.

### 8.33 Disassembly/reassembly procedure (HD-524)

### 8.33.1 Hard disk (B) (HD-524) (bizhub C368/C308/C258)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover
2. Remove the protective sheet. G.5.2.21 Protective sheet

3. Remove four screws [1], and remove the metal plate [2].
4. Remove four metal plates [2] and two connectors [3] from the hard disk [1].

5. To reinstall, reverse the order of removal.
6. After replacing, conduct hard disk mirroring.
[State Confirmation] -> [Memory/Storage Adjustment] -> [HDD Mirroring Rebuild]

### 8.33.2 Hard disk (B) (HD-524: Cover type) (bizhub C368/C308/C258)

1. Remove the lower rear cover.
G.5.2.20 Lower rear cover

2. Remove the harness from the wire saddle [1]
3. Disconnect two connectors [2].

NOTE

- Ensure that the cables do not contact with the MFP board at connecting the connectors [2].
- When the security kit SC-508 has been installed, ensure that the cables do not contact with the DSC board at connecting the connectors [2].

4. Remove four screws [1], and remove the hard disk assy [2].
5. Remove three screws [1], and remove the cover [2].
6. Remove four screws [1].
7. Remove the plate spring [2], and remove the plate [3].
8. Remove four metal plates [2] and two connectors [3] from the hard disk [1].

### 8.33.3 Hard disk (B) (bizhub C658/C558/C458)

1. Remove the duct cover.
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover. G.6.2.21 Lower rear cover

[1]
[2]

[1]

[1]
[2]

[2] [3] [1]
4. Remove five screws [1], and remove the aluminum sheet [2].
5. Remove the protective shield.
G.6.2.26 Protective shield
6. Remove the harness from the edge cover [1].
7. Disconnect two connectors [2].

NOTE

- Make sure the cable does not make contact with the MFP board when installing the connector [2].
- If the video interface kit VI-510 is installed, make sure the cable does not make contact with the relay board when installing the connector [2].

8. Remove four screws [1], and remove the hard disk assy [2].
9. Remove three screws [1], and remove the cover [2].
10. Remove four screws [1].
11. Remove four plate springs [2], and remove the plate [3].

12. Remove four metal plates [2] and two connectors [3] from the hard disk [1].
13. To reinstall, reverse the order of removal.
14. After replacing, conduct hard disk mirroring.
[State Confirmation] -> [Memory/Storage Adjustment] -> [HDD Mirroring Rebuild]

### 8.34 Disassembly/reassembly procedure (CU-101)

### 8.34.1 Clean unit cover

[1]

1. Remove two screws [1], and remove the clean unit cover [2].

## 2. NOTE

- When installing the clean unit cover, fit the clean unit cover tabs [2] into the clean unit holes [1], hold it in place and secure the screws.

2. Disconnect two connectors [1], and remove the harness from the harness guide [2].

3. To reinstall, reverse the order of removal.

### 8.34.3 Clean unit drive board (CUDB)

1. Remove the clean unit cover.
G.8.34.1 Clean unit cover

2. To reinstall, reverse the order of removal.

### 8.34.4 Exhaust fan/1 (FM14)

1. Remove the clean unit cover. G.8.34.1 Clean unit cover

[1]
[1]

[2]

2. Disconnect four connectors [1].
3. Remove the screw [2], and remove the clean unit drive board [3].
4. Disconnect two connectors [1], and remove the harness from the harness guide [2]
5. Remove two screws [1], and remove the exhaust fan assy [2].
6. Disconnect the connector [1], and remove the harness from two harness guides [2]
7. Remove two screws [3], and remove the exhaust fan/1 [4].
8. To reinstall, reverse the order of removal.

### 8.34.5 Exhaust fan/2 (FM15)

1. Remove the clean unit cover. G.8.34.1 Clean unit cover

[1]
[1]

[2]

2. Disconnect the connector [1], and remove the harness from two harness guides [2].
3. Remove two screws [3], and remove the exhaust fan cover [4].
4. Remove two screws [1], and remove the exhaust fan/2 [2].

## [1]

5. Remove the upper rear cover

Remove the upper rear co
G.5.2.22 Upper rear cover

4. Remove the harness from the edge cover [1].
[3]
[2]

[1]

### 8.34.7 Deodorant filter/UFP filter

1. Remove the clean unit cover.
G.8.34.1 Clean unit cover
[2]

[2]
[2]

[1]
2. To reinstall, reverse the order of removal.
3. Disconnect the connector [1].
4. Remove the screw [2], and remove the suction fan assy [3].
5. Remove the harness from the harness guide [1].
6. Remove the screw [2], and remove the suction fan [3].
7. Hold the pull tab [1], and remove the deodorant filter [2].
8. Hold the pull tab [1], and remove the UPF filter [2].

### 8.35 Disassembly/reassembly procedure (CU-102)

### 8.35.1 Clean unit (CU-102)

1. Remove the screw [1], and remove the cover [2].

[1]

[2]
2. To reinstall, reverse the order of removal.
8.35.2 Clean unit drive board (CUDB)

[1]

3. Disconnect the connector [1], and remove the harness from two wire saddles [2].
NOTE

- When connecting the connector [1], wind the harness two times around two wire saddles [2] as illustrated in the figure.

3. Remove four screws [1], and remove the clean unit [2].
4. Remove the screw [1], and remove the cover [2].
5. Remove five screws [1], and remove the cover [2].

6. To reinstall, reverse the order of removal.

### 8.35.3 Exhaust fan/1 (FM14)

1. Remove the clean unit. G.8.35.1 Clean unit (CU-102)

[2]

[2]

[1]
2. To reinstall, reverse the order of removal.

### 8.35.4 Exhaust fan/2 (FM15)

1. Remove the clean unit. G.8.35.1 Clean unit (CU-102)

2. Disconnect four connectors [1]
3. Remove the screw [2], and remove the clean unit drive board [3]
4. Remove four screws [1], and remove the cover [2].
5. Disconnect the connector [1], and remove the harness from two wire saddles [2] and harness guide [3].
6. Remove three screws [1], and remove the exhaust fan/1 [2].
7. Remove four screws [1], and remove the cover [2].
8. Disconnect the connector [1].

[2]

[1]
9. To reinstall, reverse the order of removal.

### 8.35.5 UFP filter

1. Remove the clean unit. G.8.35.1 Clean unit (CU-102)
[2]

[1]
[2]

[2]

[1]
2. Remove two screws [1], and remove the exhaust fan/2 [2].
3. Remove four screws [1], and remove the UFP filter/1 [2].
4. Remove two screws [1], and remove the clean unit mounting plate [2].
5. Remove the screw [1], and remove the louver [2].
6. Remove two UFP filters/2 [1].

7. To reinstall, reverse the order of removal.

### 8.36 Disassembly/reassembly procedure (KP-101)

### 8.36.1 Keypad (KP-101)

[2]

[1]
[2]

[1]

1. Remove the two screws [1], and remove the cover [2].
2. Disconnect the connector [1] and remove the keypad [2].
3. To reinstall, reverse the order of removal.

### 8.37 Disassembly/reassembly procedure (VI-508)

### 8.37.1 Video Interface Kit (VI-508)

1. Remove the lower rear cover. G.5.2.20 Lower rear cover
2. Remove the protective sheet.
G.5.2.21 Protective sheet
[4]

[3]
3. Disconnect the video transfer cable [4].
4. Remove the screw [3].
5. Remove Two screws [1], and remove the relay board [2].
[2]

[1]
6. To reinstall, reverse the order of removal.

### 8.38 Disassembly/reassembly procedure (VI-510)

### 8.38.1 Video Interface Kit (VI-510)

1. Remove the duct cover
G.6.2.23 Duct cover/1
G.6.2.24 Duct cover/2, filter assy
2. Remove the toner filter. F.8.1.1 Replacing the toner filter
3. Remove the lower rear cover.
G.6.2.21 Lower rear cover

[1]
4. Remove five screws [1], and remove the aluminum sheet [2].
5. Disconnect the video transfer cable [1].
6. Remove the screw [2].
7. Disconnect two connectors [1].

## 9. COMMERCIALLY AVAILABLE PARTS

### 9.1 Installing the key counter (bizhub C368/C308/C258)

### 9.1.1 Configuration

| K1] Key counter socket | [2] Key counter |
| :--- | :--- | :--- |

### 9.1.2 Procedure

## NOTE

- When mounting the key counter, the optional key counter kit KIT-1 (4623-474) or key counter kit KIT-CF (4623-484; only for Europe and Japan) is necessary.
- Procedure for directly mounting the key counter to the main unit is described below. For mounting the key counter to the optional working table WT-506, refer to WT-506 installation manual.
(1) Key counter kit KIT-1 (4623-474)

1. Remove the scanner right cover [1].
G.5.2.2 Scanner right cover
2. Cut out the knockouts [2] of the scanner right cover.
3. Remove two caps [3].
4. Remove the harness [2] for the key counter from the four wire saddles [1].
5. Remove the connector cover [3].
6. Route the harness [1] through two wire saddles [2] as shown in the illustration.

[1]

7. Route the harness through the hook [1] located at the middle of the upper right cover, and reinstall the upper right cover [2] using two screws [3].
8. Prepare one screw $(M 3 \times 6)$.
9. Install the mounting plate (4623 1670 \#\#) [1] included in the key counter kit with the prepared screw [2].
10. Mount the scanner right cover [1], and insert the harness for the key counter through the hole [2] knockouts were removed from.
11. Using two screws [2], secure the counter mounting bracket [1]. NOTE

- Secure the counter mounting bracket passing the connector into the bracket.
- Use the two long screws (V116 0418 14: M4 x 18) in the key counter kit to secure the counter mounting bracket.

13. Insert the key counter socket [1].
14. Mount the edge cover [2] to the counter mounting bracket and set the harness to the edge cover.

15. Connect the key counter socket connector [3].

16. Using two screws [2], secure the key counter socket [1].
[1]

17. Using two screws [2], secure the key counter cover [1].
18. Select [Service Mode] -> [Billing Setting] -> [Management Function Choice] -> [Key Counter Only] or [Vendor 2] (Use the key counter and the vendor 2 together). Then, set the relative items.
For details on setting, see "I.8.3.2 Management Function Choice".
(2) Key counter kit KIT-CF (4623-484)

19. Remove the upper right cover. G.5.2.2 Scanner right cover

[1]
20. Remove the scanner right cover [1].
G.5.2.19 Upper right cover
21. Cut out the knockouts [2] of the scanner right cover.
22. Remove two caps [3].
23. Remove the harness [2] for the key counter from the four wire saddles [1].
24. Remove the connector cover [3].
25. Route the harness [1] through two wire saddles [2] as shown in the illustration.

26. Route the harness through the hook [1] located at the middle of the upper right cover, and reinstall the upper right cover [2] using two screws [3].
27. Prepare one screw (M3 x 6).
28. Install the mounting plate (4623 1670 \#\#) [1] included in the key counter kit with the prepared screw [2].
29. Mount the scanner right cover [1], and insert the harness for the key counter through the hole [2] knockouts were removed from.
30. Using two screws [2], secure the counter mounting bracket [1]. NOTE

- Secure the counter mounting bracket passing the connector into the bracket.
- Use the two long screws (V116 0418 14: M4 x 18) in the key counter kit to secure the counter mounting bracket.

13. Insert the key counter socket [1].
14. Mount the edge cover [2] to the counter mounting bracket and set the harness to the edge cover.
15. Connect the key counter socket connector [3].
[1]

[1]

16. Using two screws [2], secure the key counter socket [1].
17. Using two screws [2], secure the key counter cover [1].
18. Select [Service Mode] -> [Billing Setting] -> [Management Function Choice] -> [Key Counter Only] or [Vendor 2] (Use the key counter and the vendor 2 together). Then, set the relative items.
For details on setting, see "I.8.3.2 Management Function Choice".

### 9.2 Installing the key counter (bizhub C658/C558/C458)

### 9.2.1 Configuration

| $[1] ~ K e y ~ c o u n t e r ~ s o c k e t ~ K e y ~ c o u n t e r ~$ |
| :--- | :--- | :--- |

### 9.2.2 Procedure

NOTE

- When mounting the key counter, the optional key counter kit KIT-1 (4623-474) or key counter kit KIT-CF (4623-484; only for Europe and Japan) is necessary.
- Procedure for directly mounting the key counter to the main unit is described below. For mounting the key counter to the optional working table WT-506, refer to WT-506 installation manual.
(1) Key counter kit KIT-1 (4623-474)

1. Remove the scanner right cover. G.6.2.2 Scanner right cover

2. Remove the upper right cover. G.6.2.20 Upper right cover

3. Cut out the knockouts [1] of the scanner right cover.
4. Remove two caps [2].
5. Remove the harness [2] for the key counter from four wire saddles [1].
6. Remove the connector cover [3].
7. Route the harness [1] through two wire saddles [2] as shown in the illustration.
8. Route the harness through the hook [1] located at the middle of the upper right cover, and reinstall the upper right cover [2] using two screws [3].
9. Prepare one screw (M3 x 6).
10. Install the mounting plate (4623 1670 \#\#) [1] included in the key counter kit with the prepared screw [2].

[1]

[2]
[1]
[2]

11. Pass the key counter harness through the hole [1] in the scanner right cover.
12. Mount the scanner right cover [2] using three screws [3].
13. Using two screws [2], secure the counter mounting bracket [1]. NOTE

- Secure the counter mounting bracket passing the connector into the bracket.
- Use two long screws (V116 0418 14: M4 x 18) in the key counter kit to secure the counter mounting bracket.

14. Insert the key counter socket [1].
15. Mount the edge cover [2] to the counter mounting bracket and set the harness to the edge cover.
16. Connect the key counter socket connector [3].
17. Using two screws [2], secure the key counter socket [1].
18. Using two screws [2], secure the key counter cover [1].
19. Select [Service Mode] -> [Billing Setting] -> [Management Function Choice] -> [Key Counter Only] or [Vendor 2] (Use the key counter and the vendor 2 together). Then, set the relative items.
For details on setting, see "I.8.3.2 Management Function Choice".
(2) Key counter kit KIT-CF (4623-484)
20. Remove the scanner right cover.
G.6.2.2 Scanner right cover

21. Remove the upper right cover. G.6.2.20 Upper right cover

22. Cut out the knockouts [1] of the scanner right cover.
23. Remove two caps [2].
24. Remove the harness [2] for the key counter from four wire saddles [1].
25. Remove the connector cover [3].
26. Route the harness [1] through two wire saddles [2] as shown in the illustration.
27. Route the harness through the hook [1] located at the middle of the upper right cover, and reinstall the upper right cover [2] using two screws [3].
28. Prepare one screw (M3 x 6).
29. Install the mounting plate (4623 1670 \#\#) [1] included in the key counter kit with the prepared screw [2].

30. Pass the key counter harness through the hole [1] in the right scanner cover.
31. Mount the scanner right cover [2] using three screws [3].
32. Using two screws [2], secure the counter mounting bracket [1]. NOTE

- Use two long screws (V116 0418 14: M4 x 18) in the key counter kit to secure the counter mounting bracket.

14. Insert the key counter socket [1].
15. Mount the edge cover [2] to the counter mounting bracket and set the harness to the edge cover.
16. Connect the key counter socket connector [3].
17. Using two screws [2], secure the key counter socket [1].
18. Using two screws [2], secure the key counter cover [1].

[2]
19. Select [Service Mode] -> [Billing Setting] -> [Management Function Choice] -> [Key Counter Only] or [Vendor 2] (Use the key counter and the vendor 2 together). Then, set the relative items.
For details on setting, see "I.8.3.2 Management Function Choice".

### 9.3 Installing the original size sensor/2 (Option)

1. Remove the scanner right cover.
G.5.2.2 Scanner right cover
G.6.2.2 Scanner right cover
2. Remove the original glass.
G.5.2.12 Original glass
G.6.2.11 Original glass
[1]
3. Remove the harness from two wire saddles [1].

[1]
[1] [3]

4. Connect the connector [2] to the original size sensor/2 [1].
5. Attach the harness to the wire saddle [3].
6. Fix the original size sensor/2 (PS205) [1] with screw [4]. NOTE

- Refer to the Parts Guide Manual for the part numbers of the wire saddle, screws, and original size sensor.

7. Select [Service Mode] -> [System 1] -> [Original Size Detection] and then set the original glass to [Table 2].
8. Select [Service Mode] -> [State Confirmation] -> [Sensor Check].

9. Set the original on the original glass, and check that the data for "Original Size Detection 2 " changes from " 0 " to " 1 " on the screen.

## H CLEANING/LUBRICATION

### 1.2 Lubrication parts list

note

- With this machine, the lubrication is not necessary.

### 1.3 Cleaning procedure

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 1.3.1 Transfer belt unit (bizhub C368/C308/C258)

1. Remove the transfer belt unit. F.7.4.3 Replacing the transfer belt unit

2. Using a hydro-wipe (65AA-99\#\#), wipe the transfer belt [1]. NOTE

- Do not wipe out with water.
- Do not wipe out with any solvents.

### 1.3.2 Transfer belt unit (bizhub C658/C558/C458)

1. Remove the transfer belt unit.
F.8.5.3 Replacing the transfer belt unit

2. Using a hydro-wipe (65AA-99\#\#), wipe the transfer belt [1]. NOTE

- Do not wipe out with water.
- Do not wipe out with any solvents.

### 1.3.3 PH window (bizhub C368/C308/C258)

1. Open the front door.
2. Remove the waste toner box.
F.7.6.1 Replacing the waste toner box

[1]
3. Clean the PH window by putting the PH window cleaning jig [1] back and forth a couple times.

NOTE

- Clean every PH window of Y,M,C,K.

### 1.3.4 PH window (bizhub C658/C558/C458)

1. Open the front door.
2. Remove the waste toner box.
F.8.7.1 Replacing the waste toner box
[1]

3. Clean the PH window by putting the PH window cleaning jig [1] back and forth a couple times.
NOTE

- Clean every PH window of Y,M,C,K.
1.3.5 Tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller (bizhub C368/C308/C258)

1. Remove the tray 1.
G.5.2.23 Tray 1
2. Remove the tray 2. G.5.2.24 Tray 2
[2]

[1]
3. Using a cleaning pad dampened with alcohol, wipe the tray 1 feed roller [1], tray 1 pick-up roller [2], tray 1 separation roller [3] clean of dirt.
1.3.6 Tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller (bizhub C658/C558/C458)
4. Remove the tray 1. G.6.2.27 Tray 1
5. Remove the tray 2. G.6.2.28 Tray 2
6. Using a cleaning pad dampened with alcohol, wipe the tray 1 feed roller [1],
tray 1 pick-up roller [2], tray 1 separation roller [3] clean of dirt.

[2] [1] [3]
1.3.7 Tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller (bizhub C368/C308/C258)
7. Remove the tray 1.
G.5.2.23 Tray 1
8. Remove the tray 2. G.5.2.24 Tray 2
[2]

9. Using a cleaning pad dampened with alcohol, wipe the tray 2 feed roller [1], tray 2 pick-up roller [2], tray 2 separation roller [3] clean of dirt.
1.3.8 Tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller (bizhub C658/C558/C458)
10. Remove the tray 1.
G.6.2.27 Tray 1
11. Remove the tray 2.
G.6.2.28 Tray 2
[2] [1]

[3]
12. Using a cleaning pad dampened with alcohol, wipe the tray 2 feed roller [1], tray 2 pick-up roller [2], tray 2 separation roller [3] clean of dirt.

### 1.3.9 Tray 2 transport roller

1. Open the right door.
[1]

2. Using a cleaning pad dampened with alcohol, wipe the tray 2 transport rollers [1] clean of dirt.

### 1.3.10 Manual bypass tray feed roller

1. Open the right door.
2. Open the registration unit.

## [1]

[2]

3. Remove the screw [1], and remove the feed roller cover [2].
4. Using a cleaning pad dampened with alcohol, wipe the manual bypass tray feed roller [1] clean of dirt.

### 1.3.11 Manual bypass tray separation roller

1. Remove the manual bypass tray separation roller unit. F.7.7.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy
2. Using a cleaning pad dampened with alcohol, wipe the manual bypass tray separation roller [1] clean of dirt.

[1]
1.3.12 Original glass (bizhub C368/C308/C258)

[1]
3. Using a cleaning pad dampened with alcohol, wipe the original glass [1] clean of dirt.
4. Using a cleaning pad dampened with alcohol, wipe the original reading glass [1] clean of dirt.

[1]
5. Using a cleaning pad dampened with alcohol, wipe the original glass [1] clean of dirt.
6. Using a cleaning pad dampened with alcohol, wipe the original reading glass [1] clean of dirt.
7. Using a cleaning pad dampened with alcohol, wipe the scanner rails [1] clean of dirt. NOTE - Apply lubricant after cleaning.

[1]

### 1.3.15 Mirrors

1. Remove the original glass. G.5.2.12 Original glass

2. Using a cleaning pad dampened with alcohol, wipe the mirrors [1].

### 1.3.16 Lens

1. Remove the original glass.
G.5.2.12 Original glass
[1]

2. Using a cleaning pad dampened with alcohol, wipe the lens [1] clean of dirt.
3. Remove five screws [1], and remove the CCD board protective shield [2].
4. Remove four tabs [1] and remove the CCD sensor cover [2].
5. Using a cleaning pad dampened with alcohol, wipe the CCD sensor [1] clean of dirt.

## 2. Dual scan document feeder

### 2.1 Cleaning parts list

| No. | Section | Part name | Ref. page |
| :---: | :--- | :--- | :--- |
| 1 | Scanning section | Back side scanning glass | H.2.2.1 Back side scanning glass |
|  |  | Back side scanning guide | H.2.2.2 Back side scanning guide/Back side scanning <br> shading shaft |
|  |  | Back side scanning shading shaft |  |

### 2.2 Cleaning procedure

### 2.2.1 Back side scanning glass

1. Open the dual scan document feeder.

2. Open the opening and closing guide [1].
3. Using a cleaning pad, wipe the back side scanning glass [1].
[1]

2.2.2 Back side scanning guide/Back side scanning shading shaft
4. Open the dual scan document feeder.
[1]

5. Using a cleaning pad with alcohol, wipe the back side scanning guide [1] and back side scanning shading shaft [2] clean of dirt.

## 3. Option

### 3.1 Cleaning parts list (bizhub C368/C308/C258)

3.1.1 DF-704

| No. | Section | Part name | Ref. page |
| :---: | :--- | :--- | :--- |

| 4 | Conveyance section | Conveyance roller/Lw | H.3.10.2 Conveyance roller/Lw |

### 3.3 Cleaning procedure (DF-704)

### 3.3.1 Back side scanning glass

1. Open the dual scan document feeder.
2. Open the opening and closing guide [1].

[1]
3. Using a cleaning pad, wipe the back side scanning glass [1].
[1]

### 3.3.2 Back side scanning guide/Back side scanning shading shaft

1. Open the dual scan document feeder.

> 2. Open the opening and closing guide [1].

[1]

3. Using a cleaning pad with alcohol, wipe the back side scanning guide [1] and back side scanning shading shaft [2] clean of dirt.

### 3.4 Cleaning procedure (PC-110/PC-210)

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 3.4.1 Tray 3 feed roller, tray 3 pick-up roller, tray $\mathbf{3}$ separation roller

1. Remove the tray 3.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)
2. Remove the tray 4 or storage box.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)

[2]
[3]
3. Using a cleaning pad dampened with alcohol, wipe the tray 3 feed roller [1], tray 3 pick-up roller [2], tray 3 separation roller [3] clean of dirt.

### 3.4.2 Tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller

1. Remove the tray 3.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)
2. Remove the tray 4.
G.8.5.4 Tray 3, tray 4 (PC-110/PC-210)

3. Using a cleaning pad dampened with alcohol, wipe the tray 4 feed roller [1], tray 4 pick-up roller [2], tray 4 separation roller [3] clean of dirt.

### 3.4.3 Tray 3 vertical transport roller, tray 4 vertical transport roller

1. Open the right door.
[1]

[2]
2. Using a cleaning pad dampened with alcohol, wipe the tray 3 vertical transport roller [1], tray 4 vertical transport roller [2] clean of dirt.

### 3.5 Cleaning procedure (PC-115/PC-215)

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 3.5.1 Tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller

1. Remove the tray 3.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)
2. Remove the tray 4 or storage box. G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)
[2] [1]

[3]
3. Using a cleaning pad dampened with alcohol, wipe the tray 3 feed roller [1], tray 3 pick-up roller [2], tray 3 separation roller [3] clean of dirt.

### 3.5.2 Tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller

1. Remove the tray 3.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)
2. Remove the tray 4.
G.8.6.4 Tray 3, tray 4 (PC-115/PC-215)

3. Using a cleaning pad dampened with alcohol, wipe the tray 4 feed roller [1], tray 4 pick-up roller [2], tray 4 separation roller [3] clean of dirt.

### 3.5.3 Tray 3 vertical transport roller, tray 4 vertical transport roller

1. Open the right door.
[1]

[2]
2. Using a cleaning pad dampened with alcohol, wipe the tray 3 vertical transport roller [1], tray 4 vertical transport roller [2] clean of dirt.

### 3.6 Cleaning procedure (PC-410)

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 3.6.1 Feed roller, Pick-up roller, Separation roller

1. Slide out the tray.
2. Open the right door.
[1]

[3]
3. Using a cleaning pad dampened with alcohol, wipe the feed roller [1], pick-up roller [2], separation roller [3] clean of dirt.
4. Using a cleaning pad dampened with alcohol, wipe the vertical transport roller [1] clean of dirt.

3.6.2 Vertical transport roller
5. Open the right door.

### 3.7 Cleaning procedure (PC-415)

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 3.7.1 Feed roller, Pick-up roller, Separation roller

1. Slide out the tray.
2. Open the right door.

[3]

### 3.7.2 Vertical transport roller

1. Open the right door.

[1]
2. Using a cleaning pad dampened with alcohol, wipe the feed roller [1], pick-up roller [2], separation roller [3] clean of dirt.
3. Using a cleaning pad dampened with alcohol, wipe the vertical transport roller [1] clean of dirt.

### 3.8 Cleaning procedure (LU-207)

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 3.8.1 Pick-up roller

1. Open the upper door.
2. Lift the pick-up roller.
3. Using a cleaning pad dampened with alcohol, wipe the pick-up roller [1] clean of dirt.
4. Open the upper door.
5. Lift the pick-up roller.
6. Using a cleaning pad dampened with alcohol, wipe the feed roller [1] clean of dirt.
7. Remove four screws [1] and remove the plate [2].
8. Using a cleaning pad dampened with alcohol, wipe the separation roller [1] clean of dirt.

### 3.8.4 Conveyance roller

1. Remove the paper feed cover. G.8.9.4 Feed cover (LU-207)
2. Using a cleaning pad dampened with alcohol, wipe the conveyance roller [1] clean of dirt.

### 3.9 Cleaning procedure (LU-302)

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 3.9.1 Pick-up roller

1. Open the upper door.
2. Move the feed roller assy up.
3. Using a cleaning pad dampened with alcohol, wipe the pick-up roller [1] clean of dirt.

### 3.9.2 Feed roller

1. Open the upper door.

2. Move the feed roller assy up.
3. Using a cleaning pad dampened with alcohol, wipe the feed roller [1] clean of dirt.
4. Remove four screws [1], and remove the plate [2].
5. Using a cleaning pad dampened with alcohol, wipe the separation roller [1] clean of dirt.

[1]

### 3.9.4 Duplex transport roller

1. Remove the paper feed cover. Feed cover (LU-303)
2. Using a cleaning pad dampened with alcohol, wipe the duplex transport roller [1] clean of dirt.

### 3.10 Cleaning procedure (PI-507)

## NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

### 3.10.1 Pick-up roller/Lw, feed roller/Lw, separation roller/Lw

1. Remove the upper cover.
G.8.24.1 Upper cover (PI-507)
[1]

[2]
[1]

2. Pull the unlock lever [1] and open the upper door [2].
3. Clean the pick-up roller/Lw [1] with a cleaning pad dampened with alcohol.
4. Clean the feed roller/Lw [1] with a cleaning pad dampened with alcohol.

[1]
5. Remove the feed roller assy/Lw.
F.23.1.1 Replacing the pick-up roller/Lw / feed roller/Lw (PI-507)
6. Clean the separation roller/Lw [1] with a cleaning pad dampened with alcohol.

[1]

### 3.10.2 Conveyance roller/Lw

1. Remove the post inserter.
G.8.24.4 Post Inserter (PI-507)
2. Clean the conveyance roller/Lw [1] with a cleaning pad dampened with alcohol.

[1]

## I ADJUSTMENT/SETTING

1. How To Use The Adjustment/Setting Section
1.1 How to use the adjustment/setting section

- "Adjustment/Setting" contains detailed information on the adjustment items and procedures for this machine.

### 1.2 Advance checks

Before attempting to work adjustments and settings, the following advance checks must be made. Check to see if:

- The power supply voltage meets the specifications.
- The power supply is properly grounded.
- The machine shares the power supply with any other machine that draws large current intermittently. (e.g., elevator and air conditioner that generate electric noise)
- The installation site is environmentally appropriate:
- High temperature, high humidity, direct sunlight, ventilation, etc.
- Levelness of the installation site

NOTICE

- Installation Requirements
- The original has a problem that may cause a defective image.
- The density is properly selected.
- The original glass, original reading glass, or related part is dirty.
- Correct paper is being used for printing.
- The units, parts, and supplies used for printing (developer, PC drum, etc.) are properly replenished and replaced when they reach the end of their useful service life.
- Toner is not running out.

## 4. WARNING

- To unplug the power cord of the machine before starting the service job procedures.
- If it is unavoidably necessary to service the machine with its power turned ON, use utmost care not to be caught in the scanner cables or gears of the exposure unit.
- Special care should be used when handling the fusing unit which can be extremely hot.

## $\triangle$ CAUTION

- The developing unit has a strong magnetic field. Keep watches and measuring instruments away from it.
- Take care not to damage the PC drum with a tool or similar device.
- Do not touch IC pins with bare hands.

## 2. List of utility mode

### 2.3 User Settings List

NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to " User's Guide ."
- User Settings
- System Settings
- Custom Display Settings
- Copier Settings
- Scan/Fax Settings
- Fax Settings
- Printer Settings
- Change Password
- Change E-Mail Address
- Register Authentication Information
- Synchronize User Auth. and Account Track
- Registered Application Settings
- Change PIN Code

### 2.3.1 System Settings

(1) User Settings > System Settings [1/2]

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |
| :--- | :--- |
| Language Selection | The language as a default depend on the marketing area selected in [Marketing Area] available from [System 1] <br> under Service Mode. |
| Select Keyboard | The type of keyboard to be displayed when [Local Keyboard] is selected depends on the language selected in <br> [User Settings] -> [System Settings] -> [Language Selection]. |
| Measurement Unit Settings | - |

- *1: bizhub C368/C308/C258 only
- *2: bizhub C658/C558/C458 only
- *3: Except for bizhub C658
(2) User Settings > System Settings [2/2]

## NOTE

- Keys displayed on screens are different depending on the setting.
" For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |
| :--- | :--- |
| Page Number Print <br> Position | It will be displayed when [Administrator Settings] -> [Security Settings] -> [Administrator Security Levels] is set to <br> "Level 2." |
| Blank Sheet Detection <br> Level | - |
| Separate Scan from Platen | - |
| Multi-Feed Detection <br> Setting *1 | It will be displayed when optional double feed detection kit UK-501 is mounted. |
| bizhub Remote Access <br> Setting | This is displayed when an Android tablet device is connected. |

- *1: bizhub C658/C558/C458 only

### 2.3.2 Custom Display Settings

(1) User Settings $>$ Custom Display Settings [1/2]

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |  |
| :--- | :--- | :--- |
| Copier Settings | Default Tab | - |
|  | Quick Settings 1 | When this setting is set to ON, select the copy functions you wish to register. |
|  | Quick Settings 2 |  |
|  | Default Paper Type Display | This displays when a custom paper is registered. |
| Scan/Fax Settings | Default Tab | - |

(2) User Settings > Custom Display Settings [2/2]

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name |  | Function/Precondition |

| Key name | Function/Precondition |
| :--- | :--- |
| Black Compression Level | It will be displayed when either [IP Address Fax Function] or [Internet Fax Function] is set to "ON" in |
| [Administrator Settings] -> [Network Settings] -> [Network Fax Settings] -> [Network Fax Function Settings]. |  |
| Color/Grayscale Multi- <br> Value Compression <br> Method |  |
| Internet Fax Self RX <br> Ability | It will be displayed when [Administrator Settings] -> [Network Settings] -> [Network Fax Settings] -> [Network <br> Fax Function Settings] -> [Internet Fax Function] is set to "ON". |
| Internet Fax Advanced <br> Settings |  |
| IP Address Fax Operation <br> Settings | It will be displayed when [Administrator Settings] -> [Network Settings] -> [Network Fax Settings] -> [Network <br> Fax Function Settings] -> [IP Address Fax Function] is set to "ON". |

(2) Administrator Settings > Fax Settings [2/2]

## NOTE

- Keys displayed on screens are different depending on the setting.
- It will be displayed when optional fax kit FK-514 is mounted.
" For details of the utility functions, refer to "User's Guide."

| Key name |  | Function/Precondition |
| :---: | :--- | :--- |
| Fax Print Quality Settings | - |  |

### 2.4.10 System Connection

## (1) Administrator Settings > System Connection

NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |  |  |
| :---: | :---: | :---: | :---: |
| OpenAPI Settings | Access Setting | - |  |
|  | SSL/Port Settings | - |  |
|  | Authentication | - |  |
|  | External Application Connection | - |  |
|  | Proxy Settings | - |  |
|  | Specified Application Start Setting | It will be displayed when [ Setting] is set to "Permit." | rvice Mode] -> [System 2] -> [Application Change |
|  | Single Sign-On Setting | This displays when an aut | ntication application is registered. |
| Call Remote Center | For details of the functions, refer to " I.5.7 CS Remote Care (Outlines)". |  |  |
| Prefix/Suffix Automatic Setting | - |  |  |
| Mobile Connection Settings | Simple Connection Setting | QR Code Display Setting | - |

| Key name | Function/Precondition |  |  |
| :---: | :---: | :---: | :---: |
|  |  | Enable NFC | This setting is synchronized with [Administrator Settings] - [User Authentication/Account Track] -> [General Settings] -> [Enable NFC]. |
|  |  | Enable Bluetooth LE | - It will be displayed when optional local interface kit EK-609 is mounted. <br> - This setting is synchronized with [Administrator Settings] - [User Authentication/Account Track] -> [General Settings] -> [Enable Bluetooth LE]. |
|  | Wireless Connection Setting | - This setting is available when [Simple Connection Setting] -> [QR Code Display Setting] is set to "ON." <br> - When [Network Settings] -> [Network I/F Configuration] is set to [Wireless Only], a pairing is established by applying the wireless settings of this machine; therefore, this setting is not displayed. |  |
|  | Touch Link Application Settings | - |  |
| Serverless Pull Printing Settings *1 | Client Function Settings | - |  |
|  | Store Print Documents Setting | - |  |
|  | Topology Function Setting | - |  |
|  | IPP Authentication Settings | - |  |
|  | Group settings | - |  |
|  | Status of devices in Group | - |  |

- *1: This setting will be available when optional i-Option LK-114 and upgrade kit UK-211 are enabled. Upgrade kit UK-211 is not required for bizhub C658/C558/C458.

### 2.5 Administrator Settings List [2/2]

### 2.5.1 Administrator settings outline $\mathbf{2 / 2}$

## NOTE

- The Administrator Settings will be available by entering the administrator password (16 digits) set by the Administrator Settings or Service Mode. (The administrator password is initially set to "1234567812345678.")
- When [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to "ON", entering the incorrect administrator password three times will cause access lock. The access lock is released after the lapse of a predetermined period of time (Default setting: 5 min.) after the main power switch is turned OFF and then ON more than 10 seconds later. The access lock can be released by [Service Mode] -> [Enhanced Security] -> [Administrator unlocking].
- For details of the utility functions, refer to "User's Guide."

- Administrator Settings [1/2]

### 2.5.2 Security Settings

(1) Administrator Settings > Security Settings [1/3]

NOTE

- Keys displayed on screens are different depending on the setting.
" For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |  |
| :---: | :---: | :---: |
| Administrator Password | When "Enable" is selected in [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Password Rules], the following passwords cannot be accepted: password of single repeated characters, password same as the one before being changed, and password where the number of characters is less than the minimum number specified in [Set Minimum Password Length]. |  |
| Administrator Password Change Permission Setting |  |  |
| User Box Administrator Setting | - [Allow] cannot be selected when user authentication and account track are not conducted. <br> - If [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to "ON", selecting "Allow" in this setting cancels enhanced security mode. <br> - When "Enable" is selected in [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Password Rules], the following passwords cannot be accepted: password of single repeated characters, password same as the one before being changed, and password where the number of characters is less than the minimum number specified in [Set Minimum Password Length]. |  |
| Administrator Security Levels | It will not be displayed when [Service Mode] -> [Billing Setting] -> [Management Function Choice] shows that the vendor 2 is mounted. |  |
| USB Connection Permission setting | - If [Restrict] is selected in [External Memory (Administrator)], [TPM Key Backup] is restricted in addition to the functions that can be set in [Individual Settings]. <br> - Also, USB memory is not available for the following functions. <br> [TX Operation Log Output], [Main Menu Display Settings], [License Settings], [Authorization function Setting] |  |
| FW Update (USB) Perm. Sett. | - |  |
| Security Details | Password Rules | - [Enable] cannot be selected when [Service Mode] -> [Enhanced Security] -> [CE Authentication] is set to "OFF." "OFF" setting of [CE Authentication] will not be displayed and cannot be set to "OFF" when [Password Rules] is set to "Enable." <br> - If [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to "ON", selecting "Disable" in this setting cancels enhanced security mode. <br> - When the password rule is set to [Enable], the password cannot be changed or registered unless it follows the above conditions. |
|  | Prohibited Functions When Authentication Error | - If [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to "ON", selecting "Mode 1" in this setting cancels enhanced security mode. Only the number of times for trials up to the access lock can be changed. <br> - For details of the functions, refer to " I.2.11.12 Security Settings - Prohibited Functions When Authentication Error." |
|  | Confidential Document Access Method | It cannot be changed at the operator's option since it will automatically be set according to the [Prohibited Functions When Authentication Error] setting. |

| Key name | Function/Precondition |  |
| :---: | :---: | :---: |
|  | HDD Encryption Setting | For details of the functions, refer to " I.2.11.14 Security Settings - HDD Encryption Setting." |
|  | Debug Log Encryption Settings | - Use: To set a password used to encrypt debug data when storing it into the HDD. <br> - Default setting: 01234567890123456789 <br> - For details of the functions, refer to " I.2.11.15 Security Settings - Debug Log Encryption Settings." |
| Function Management Settings | Usage Setting for Each Function | It will be displayed when [Service Mode] -> [Billing Setting] -> [Management Function Choice] shows that vendor 2 or management device 2 is mounted. |
|  | Maximum Job Allowance |  |
|  | Network Function Usage Settings | When the vendor or management device setting in the Service Mode is set, this setting is set to "OFF." Exercise caution since it will stay in "OFF" setting even when "unset" is selected on vendor or management device setting in Service Mode later. |

(2) Administrator Settings > Security Settings [2/3]

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |  |
| :---: | :---: | :---: |
| Stamp Settings | Apply Stamps | - |
|  | Delete Registered Stamp | - |
| Job Log Settings | Job Log Usage Set. | - |
|  | Automatic Log Distr Set. | - |
| Image Log Transfer Settings | - This is displayed only when Switch No. "63" is set to [00000001] at Bit assignment/[01] at HEX assignment (Type 1) or [00000010] at Bit assignment/[02] at HEX assignment (Type 2) in [Service Mode] -> [System 2] -> [Software Switch Setting]. <br> - For details of the functions, refer to [ I.2.11.16 Security Settings - Image Log Transfer Settings (Type1).] <br> - For details of the functions, refer to [ I.2.11.17 Security Settings - Image Log Transfer Settings (Type2).] |  |

| FIPS Settings | - |  |
| Maintenance Mode Access | To enable Maintenance Mode Access, set [Maintenance Mode] of Service Mode to [Effective]. [Service Mode] -> [System 2] -> [Maintenance Mode] |  |
| Quick Security Setting | For details of the functions, refer to Quick Security setting. |  |
| Information Backup Setting | Server Backup | - |
|  | Restore from Server | - |
|  | HDD Backup | - |
| User Box Document Backup | - |  |

(3) Administrator Settings > Security Settings [3/3]

NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name |  | Function/Precondition |
| :---: | :--- | :--- |
| Delete Data Backup | -- |  |

### 2.5.3 License Settings

(1) Administrator Settings > License Settings

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name |  |  |
| :--- | :--- | :--- |
| Get Request Code | - | Function/Precondition |
| Install License | - By making settings in [Service Mode] -> [Billing Setting], CE can also activate functions provided by i-Option. |  |
|  | - When activating i-Option, MFP accesses to KM license server via WebDAV connection. Set the proxy server |  |
|  | setting in [Administrator Settings] -> [Network Settings] -> [WebDAV Settings] -> [Proxy Setting for Remote |  |
|  | Access] as occasion demands. |  |
|  | F For accessing to KM license server, it is necessary to select "Fixed Address" in [Service Mode] -> [Billing |  |
|  | Setting] -> [WebDAV Server Setting]. |  |
|  | - For details of the functions, refer to License Settings. |  |
| List of Enabled Functions | It is displayed when this machine is equipped with an optional upgrade kit UK-211 *1. |  |

- *1: Not required for bizhub C658/C558/C458

### 2.5.4 Authorization function Setting

(1) Administrator Settings $>$ Authorization function Setting

NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |  |
| :--- | :--- | :--- |
| Authorization function <br> Setting | Install License | - |
|  | Install License from Ext. <br> Memory | This appears when an external memory device (USB memory) that contains the <br> license installation file is connected to the machine. |
|  | List of Enabled Functions | This appears if there are activated functions. |

### 2.5.5 Voice Guidance Settings

NOTE

- Keys displayed on screens are different depending on the setting.
" For details of the utility functions, refer to "User's Guide."

| Key name |  |
| :--- | :--- |
| Voice guidance | • To use voice guidance, the optional upgrade kit UK-211 *1 and i-Option LK-104 v3 must be activated, and the |
|  | optional local interface kit EK-608 must be mounted. |

- *1: Not required for bizhub C658/C558/C458

### 2.5.6 OpenAPI Certification Management Setting

(1) Administrator Settings > OpenAPI Certification Management Setting

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |
| :---: | :--- |

### 2.5.7 External Memory Backup

## (1) Administrator Settings > External Memory Backup

## NOTE

- Keys displayed on screens are different depending on the setting.

| Key name |  | Function/Precondition |
| :--- | :---: | :---: |
| Import | • It will be displayed when [Service Mode] -> [System 2] -> [Software Switch Setting] shows that switch No.72 |  |
| is set to [00000100] at Bit assignment/[04] at HEX assignment. |  |  |
| Export | For details of the functions, refer to "External Memory Backup - Import/Export". |  |

### 2.5.8 Remote Access Setting

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name | Function/Precondition |  |
| :--- | :--- | :--- |
| Import/Export User Data | Allow | This displays when using the CS Remote Care system. |
|  | Restrict |  |

### 2.5.9 Eco Copier Settings

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to "User's Guide."

| Key name |  | Function/Precondition |
| :--- | :--- | :--- |
| Eco Copier Settings | - |  |

### 2.6 Administrator Shortcut Settings

### 2.6.1 Administrator Shortcut Settings [1/2]

NOTE

- Keys displayed on screens are different depending on the setting.
" For details of the utility functions, refer to " User's Guide ."

| Key name | Function/Precondition |
| :---: | :---: |
| Create One-Touch Destination | The default setting for short cut keys 7/8 is "Do Not Use". |
| Create User Box |  |
| Power Supply/Power Save Settings |  |
| List/Counter |  |
| TCP/IP Settings |  |
| E-Mail Settings |  |

### 2.6.2 Administrator Shortcut Settings [2/2]

## NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to " User's Guide ."

| Key name |  |
| :--- | :--- |
| General Settings | The default setting for short cut keys $15 / 16$ is "Do Not Use". |
| User Authentication  <br> Settings  |  |
| Set Paper Name by User |  |
| Custom Display Settings |  |

| Key name |  | Function/Precondition |
| :--- | :--- | :--- |
| Install License |  |  |
| Administrator Password |  |  |

### 2.7 Banner Printing

## NOTE

- Keys displayed on screens are different depending on the setting.
" For details of the utility functions, refer to " User's Guide ."

| Function Name |  | Function/Precondition |
| :--- | :--- | :--- |
| Allow | - |  |
| Restrict | - |  |

### 2.8 My Panel Settings

NOTE

- Keys displayed on screens are different depending on the setting.

| Function Name | Function/Precondition |
| :---: | :---: |
| Language Setting | - It is displayed when the optional upgrade kit UK-211*1 is validated and PageScope My Panel Manager is installed. <br> - This is displayed when a registered user is logging in after user authentication. However, this is not displayed when both management device 2 and user authentication are used. <br> - Use : To make various settings about My Panel. To customize My Panel screen for individual registered users. <br> - Registering, editing, and deleting My Panel settings are allowed when logging in as a registered user. <br> - When My Panel is not customized, the settings for machine take effect in the three of the control panel settings, Language setting, Measurement unit setting, and Color selection setting. <br> - Depending on the functions provided by each machine and the optional device configuration, not all My Panel settings may not take effect. |
| Measurement Unit Setting |  |
| Copier Settings |  |
| Scan/Fax Settings |  |
| User Box Settings |  |
| Function Display Key (Copy/Print) |  |
| Function Display Key (Send/Save) |  |
| Main Menu Settings |  |
| Initial Screen Setting |  |

- *1: Not required for bizhub C658/C558/C458

### 2.9 Device Information List

### 2.9.1 Device Information [1/2]

## NOTE

- Keys displayed on screens are different depending on the setting.
" For details of the utility functions, refer to " User's Guide ."

| Function Name |
| :--- |
| Function Version |
| IPv4 Address |
| IPv6 Address |
| Serial Number |
| Contact Telephone Number |
| Auth. Function list display |
| QR Code Display |

### 2.9.2 Device Information [2/2]

NOTE

- Keys displayed on screens are different depending on the setting.
- For details of the utility functions, refer to " User's Guide ."

|  | Function Name |
| :--- | :--- |
| Contact Fax Number |  |
| Version Information |  |

### 2.10 Remote Panel Operation List

NOTE

- Keys displayed on screens are different depending on the setting.
" For details of the utility functions, refer to " User's Guide ."

| Key name |  | Function/Precondition |
| :--- | :--- | :--- |
| Start | • It will be displayed when [Administrator Settings] -> [Network Settings] -> [Remote Panel Settings] -> [Client |  |
|  | Settings] is set to "ON." |  |
|  | • To start remote operations of the control panel of the machine. |  |

### 2.11 Supplementary explanation of utility mode

### 2.11.1 User Authentication/Account Track-Authentication Device Settings

- It will be displayed when [Service Mode] -> [Billing Setting] shows that the authentication device 2 is mounted.
- It will be displayed when [Administrator Settings] -> [Network Settings] -> [IWS Settings] is set to "ON."

## (1) General Settings

(a) Use

- Specifies a device used for user authentication.

|  |  | - [Card Authentication]: Logs in simply by placing your IC card or NFC-compatible Android device on the authentication unit. <br> - [Card Authentication + Password]: Logs in by placing the IC card or NFC-compatible Android device on the authentication unit and entering the password. <br> [Card Authentication] is specified by default. |
| :---: | :---: | :---: |
|  | Authentication Card ID Number | - Specify whether to notify the counter, which collects the use status of this machine, of the authentication card ID. <br> - [lgnore] is specified by default. |
| Bio <br> Authenticati on | Beep Sound | - Set whether to give a "blip" sound when the finger vein pattern is scanned successfully. <br> - [ON] is specified by default. |
|  | Operation Settings | Set how to log in to this machine. <br> - [1-to-many authentication]: A user simply needs to place his or her finger to log in. <br> - [1-to-1 authentication]: A user needs to enter the user name and place his or her finger to log in. <br> [1-to-many authentication] is specified by default. |

## (b) Procedure

- Select either one of the authentication devices and press the corresponding key to go to the individual operation setting screen.
- The screen displays the authentication device that is selected in [Service Mode] -> [Billing Setting] -> [Authentication Device 2].
- If SSFC (Shared Security Formats Cooperation) is selected in Card Authentication, set [Company Code], [Company Identification Code], [Area No.], [Building No.], [Floor No.], [Room No.], and [Security Level].
(c) Setting items for SSFC card information
- When using SSFC card, acquire the following information from the administrator and convert the value to input using the control panel.

| Information to be obtained from the administrator |  |  |
| :---: | :---: | :---: |
| Items of FeliCa SSFC detail setting | Sample-data (decimal number) | Setting value (hexadecimal number) |
| Room number | 37 | 0025 |
| Floor number | 15 | 000 F |
| Building number | 50 | 0032 |
| Area number | 85 | 0055 |
| Security level | 2 | 0002 |
| Company identification code (CL code) <br> *1 | 06BGLQVX17 (ASCII code) | 303642474 C 5156583137 |
| Company code *2 | CompanyA (ASCII code) | CompanyA |

*1: The character length of the company code is 10 bytes.
*2: Use alphabetical upper case/lower case characters and numeric characters for Company code. When the company code is not set, this space will be left blank.

## (2) Logoff Settings

(a) Use

- Select whether or not the user is logged off after a scan or fax is sent or after the copy document is scanned.
(b) Default setting
- Do not log off
(c) Setting item
- Do not log off
- Log off

### 2.11.2 Network Settings-Network Fax Settings

- It will not be displayed on the screen when all items are set to "OFF" in [Service Mode] -> [System 2] -> [Network Fax Settings].

## (1) Network Fax Function Settings

## (a) IP Address Fax Function

- Setting will be available when [IP Address Fax] is set to "ON" in [Service Mode] -> [System 2] -> [Network Fax Settings]. Use
- To set whether or not to use IP address fax function.

Default setting

- OFF

Setting item

- ON
- OFF

## (b) Internet Fax Function

- Setting will be available when [Internet Fax] is set to "ON" in [Service Mode] -> [System 2] -> [Network Fax Settings]. Use
- To set whether or not to use Internet fax function.

Default setting

- OFF

## Setting item

- ON
- OFF

## (2) SMTP TX Settings

(a) Use

- To set SMTP TX when network fax function is being used.
- To set SMTP TX port number and connecting time out period when network fax function is being used.
(b) Port No.

Procedure

1. Touch [Input].
2. Enter the port number between 1 and 65535 using the 10-key pad.

## (c) Connection Timeout

Procedure

1. Touch [Input].
2. Enter the connection timeout time between 5 and 1000 (sec.) using the 10-key pad.

## (3) SMTP RX Settings

(a) Use

- To set SMTP RX when network fax function is being used.
- To set SMTP RX port number and connecting time out period when network fax function is being used.
(b) SMTP RX

Default setting

- OFF

Setting item

- ON
- OFF
(c) Port No.

Procedure

1. Touch [Input].
2. Enter the port number between 1 and 65535 using the 10-key pad.

## (d) Connection Timeout

Procedure

1. Touch [Input]
2. Enter the connection timeout time between 5 and 1000 (sec.) using the 10-key pad.

### 2.11.3 Network Settings-Network I/F Configuration

- It will be displayed when the optional upgrade kit UK-212 or UK-215and local interface kit EK-608 are mounted.
(1) Use
- To add a network interface to this machine, set a network interface configuration.

| Wired Only | Select this option to use this machine only in the wired LAN environment. |
| :--- | :--- |
| Wireless Only | Select this option to use this machine only in the wireless LAN environment. This machine runs as <br> a wireless LAN adapter in the wireless LAN environment. |
| Wired + Wireless (Secondary Mode) | Select this option to use this machine in both the wired LAN environment and wireless LAN <br> environment. This machine runs as a wireless LAN adapter in the wireless LAN environment. |
| Wired + Wireless (Primary Mode) *1 | Select this option to use this machine in both the wired LAN environment and wireless LAN <br> environment. This machine runs as a wireless LAN access point in the wireless LAN environment. |
| Wired + Wireless (Simple AP Mode) *2 | Select this option to use this machine in both the wired LAN environment and wireless LAN <br> environment. This machine runs as a wireless LAN access point in a wireless LAN environment. |
| Wired + Wireless (Wi-Fi Direct) | Select this option to use this machine in both the wired LAN environment and wireless LAN <br> environment. This machine runs as a group owner of Wireless LAN Direct in the wireless LAN <br> environment. |

*1: It will be displayed when optional upgrade kit UK-212 is mounted.
*2: It will be displayed when optional upgrade kit UK-215 is mounted.

## (2) Default setting

- Wired Only

### 2.11.4 Network Settings-Wireless Network Setting

- Configure settings to use this machine as a wireless LAN access point or wireless LAN adapter.
- It will be displayed when the optional upgrade kit UK-212 or UK-215is mounted.
(1) Use
(a) [Wireless Only] or [Wired + Wireless (Secondary Mode)]
- [Wireless Only] or [Wired + Wireless (Secondary Mode)] is selected in [Administrator Settings] -> [Network Settings] -> [Network I/F Configuration]

| Awake from ErP | Select the method to return the machine from the ErP Auto Power Off mode. <br> - [OFF]: The machine is not returned from the ErP Auto Power Off mode. <br> - [Awake with Magic Packet]: The machine returns from the ErP Auto Power Off mode when receiving <br> a magic packet. |
| :--- | :--- | :--- |
| [Awake with ARP + Unicast Communication]: The machine returns from the ErP Auto Power Off |  |
| mode when receiving a unicast communication packet. |  |
| [Awake with Magic Packet] is specified by default. |  |

*1: It will be displayed when optional upgrade kit UK-212 is mounted.
(b) [Wired + Wireless (Primary Mode)]

- [Wired + Wireless (Primary Mode)] is selected in [Administrator Settings] -> [Network Settings] -> [Network I/F Configuration]
- When optional upgrade kit UK-212 is mounted.

| Awake from ErP | Select the method to return the machine from the ErP Auto Power Off mode. <br> - [OFF]: The machine is not returned from the ErP Auto Power Off mode. <br> - [Awake with Magic Packet]: The machine returns from the ErP Auto Power Off mode when receiving a magic packet. <br> - [Awake with ARP + Unicast Communication]: The machine returns from the ErP Auto Power Off mode when receiving a unicast communication packet. <br> [Awake with Magic Packet] is specified by default. <br> Set [Awake with ARP + Unicast Communication] for this function. |
| :---: | :---: |
| AP Mode Setting | Manually configure settings to use this machine as a wireless LAN access point. <br> - [SSID]: Enter the SSID of this machine (using up to 32 bytes). When [Wired + Wireless (Primary Mode)] is selected in Network I/F Configuration, the SSID of the access point is used. When [Wired + Wireless (Wi-Fi Direct)] is selected in Network I/F Configuration, the SSID for Wi-Fi Direct connection is used. The SSID specified here is displayed on the Wi-Fi Direct (setting) screen of the terminal compatible with Wi-Fi Direct. If you cannot connect to this machine by specifying the SSID on the Wi-Fi Direct (setting) screen, specify [Virtual SSID] on the Wi-Fi (setting) screen to make a connection. <br> - [40 to 20 MHz Auto Switch]: Select [ON] to try a high-speed communication with 40 MHz . [OFF] is specified by default. <br> - [Authentication/Encryption Algorithm]: Select the algorithm used for authentication or encryption. [No Authentication/Encryption] is specified by default. <br> - Specify [Key Input Method] and [WEP Key] when [WEP] is selected in [Authentication/ Encryption Algorithm]. To specify multiple WEP keys, select the required WEP keys in [Use key settings]. When [Wired + Wireless (Wi-Fi Direct)] is selected in Network I/F Configuration, [WEP] is not available. <br> - When an algorithm other than [WEP] or [No Authentication/Encryption] is selected in [Authentication/Encryption Algorithm], specify [Key Input Method] and [Passphrase]. If necessary, specify whether to automatically update the Encryption Key in [Passphrase Auto Update]. To automatically update the Encryption Key, enter its update interval in [Update Interval]. |
| Wireless Channel | Set a wireless channel to be used by the access point. Selecting [Auto] searches for a channel that is not being used for other access points, and automatically assigns it to the access point. [Auto] is specified by default. |
| ANY connection | Select whether to allow ANY connection. If [Restrict] is selected, the SSID cannot be detected automatically as an access point in the wireless LAN adapter side. [Allow] is specified by default. This option is displayed only when [Wired + Wireless (Primary Mode)] is selected in Network I/F Configuration. |

| MAC Address Filtering | Restricts wireless LAN adapters that can be connected to the access point using the MAC address. Enter the MAC addresses of wireless LAN adapters that can be connected to the access point. MAC addresses of up to 16 devices can be registered. <br> This option is displayed only when [Wired + Wireless (Primary Mode)] is selected in Network I/F Configuration. |
| :---: | :---: |
| DHCP Server Settings | Configure a setting to use the DHCP server function. <br> - [Enable Settings]: Select whether to enable the DHCP server function. [Disabled] is specified by default. <br> - [IPv4 lease address]: Specify the range of IPv4 addresses to be leased from the DHCP server when enabling the DHCP server function. <br> - [Subnet Mask]: Specify the subnet mask of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. <br> - [Lease Period]: Specify the lease period of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. |
| No. of Concurrent Devices Allowed | Enter the number of devices that can be connected simultaneously to the access point. [5] devices is specified by default. |
| Signal Strength Setting | Select the radio field intensity of the access point from three levels (Low, Middle, and High). [High] is specified by default. |
| Device Setting | Allows you to check the MAC address of the wireless network adapter. |
| Display Connected Devices | Displays a list of names and MAC addresses of wireless LAN adapters that are connected to the access point. |
| Virtual SSID | Displays the automatically generated virtual SSID. This option is available when a terminal incompatible with Wi-Fi Direct is connected to this machine. A virtual SSID is displayed on the Wi-Fi (setting) screen of a terminal incompatible with Wi-Fi Direct. The virtual SSID is displayed with "DIRECTXXXXXX" ("XXXXXX" indicates a combination of the random alphanumeric characters and the specified value of [SSID]). |
|  | This option is displayed when [Wired + Wireless (Wi-Fi Direct)] is selected in Network I/F Configuration. |

(c) [Wired + Wireless (Simple AP Mode)]

- [Wired + Wireless (Simple AP Mode)] is selected in [Administrator Settings] -> [Network Settings] -> [Network I/F Configuration]
- When optional upgrade kit UK-215 is mounted.

| Awake from ErP | Select the method to return the machine from the ErP Auto Power Off mode. <br> - [OFF]: The machine is not returned from the ErP Auto Power Off mode. <br> - [Awake with Magic Packet]: The machine returns from the ErP Auto Power Off mode when receiving a magic packet. <br> - [Awake with ARP + Unicast Communication]: The machine returns from the ErP Auto Power Off mode when receiving a unicast communication packet. <br> [Awake with Magic Packet] is specified by default. |
| :---: | :---: |
| Simple AP Mode Setting | Manually configure settings to use this machine as a wireless LAN access point. <br> - [SSID]: Enter the SSID to use this machine as a wireless LAN access point (using up to 32 bytes). <br> - [Authentication/Encryption Algorithm]: The algorithm for authentication or encryption is fixed to [WPA2-PSK(AES)]. |
| Wireless Channel Setting | Specify the frequency band and channel required for wireless LAN connection. <br> - [Frequency Band]: Select the frequency band required for wireless LAN connection. <br> - [2.4GHz]: Select the channel to be used for wireless LAN connection of the 2.4 GHz band. Selecting [Auto] searches for a channel that is not being used for other access points, and automatically assigns it to the access point. [Auto] is specified by default. <br> - [5GHz]: Select the channel to be used for wireless LAN connection of the 5 GHz band. Selecting [Auto] searches for a channel that is not being used for other access points, and automatically assigns it to the access point. [Auto] is specified by default. |
| DHCP Server Settings | Configure a setting to use the DHCP server function. <br> - [Enable Settings]: Select whether to enable the DHCP server function. [Disabled] is specified by default. <br> - [IPv4 lease address]: Specify the range of IPv4 addresses to be leased from the DHCP server when enabling the DHCP server function. <br> - [Subnet Mask]: Specify the subnet mask of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. <br> - [Lease Period]: Specify the lease period of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. |
| No. of Concurrent Devices Allowed | Enter the number of devices that can be connected simultaneously to the access point. [4] devices is specified by default. |
| Device Setting | Allows you to check the MAC address of the wireless network adapter. |
| Display Connected Devices | Displays a list of names and MAC addresses of wireless LAN adapters that are connected to the access point. |
| Passphrase | Specify the passphrase. <br> - [Key Input Method]: Select the method to enter the passphrase. <br> - [Passphrase]: Enter the passphrase. |

## (d) [Wired + Wireless (Wi-Fi Direct)]

- [Wired + Wireless (Wi-Fi Direct)] is selected in [Administrator Settings] -> [Network Settings] -> [Network I/F Configuration]
- When optional upgrade kit UK-212 is mounted.

| Awake from ErP | Select the method to return the machine from the ErP Auto Power Off mode. <br> - [OFF]: The machine is not returned from the ErP Auto Power Off mode. <br> - [Awake with Magic Packet]: The machine returns from the ErP Auto Power Off mode when receiving a magic packet. <br> - [Awake with ARP + Unicast Communication]: The machine returns from the ErP Auto Power Off mode when receiving a unicast communication packet. <br> [Awake with Magic Packet] is specified by default. <br> Set [Awake with ARP + Unicast Communication] for this function. |
| :---: | :---: |
| AP Mode Setting | Manually configure a setting to operate this machine as a Wi-Fi Direct group owner. <br> - [SSID]: Enter the SSID to use this machine as a Wi-Fi Direct group owner (using up to 32 bytes). This option is available when a device compatible with Wi-Fi Direct is connected to this machine. The SSID specified here is displayed on the Wi-Fi Direct (setting) screen of the device compatible with Wi-Fi Direct. If you cannot connect to this machine by specifying the SSID on the Wi-Fi Direct (setting) screen, specify [Virtual SSID] on the Wi-Fi (setting) screen to make a connection. <br> - [40 to 20 MHz Auto Switch]: Select [ON] to try a high-speed communication with 40 MHz . [OFF] is specified by default. <br> - [Authentication/Encryption Algorithm]: The algorithm for authentication or encryption is fixed to [WPA2-PSK(AES)]. A passphrase is generated automatically. If necessary, specify whether to automatically update the Encryption Key in [Passphrase Auto Update]. To automatically update the Encryption Key, enter its update interval in [Update Interval]. |
| Wireless Channel | Set a wireless channel to be used by the access point. Selecting [Auto] searches for a channel that is not being used for other access points, and automatically assigns it to the access point. [Auto] is specified by default. |
| DHCP Server Settings | Configure a setting to use the DHCP server function. <br> - [Enable Settings]: Select whether to enable the DHCP server function. [Disabled] is specified by default. <br> - [IPv4 lease address]: Specify the range of IPv4 addresses to be leased from the DHCP server when enabling the DHCP server function. <br> - [Subnet Mask]: Specify the subnet mask of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. <br> - [Lease Period]: Specify the lease period of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. |
| No. of Concurrent Devices Allowed | Enter the number of devices that can be connected simultaneously to the access point. [5] devices is specified by default. |
| Signal Strength Setting | Select the radio field intensity of the access point from three levels (Low, Middle, and High). [High] is specified by default. |
| Device Setting | Allows you to check the MAC address of the wireless network adapter. |
| Display Connected Devices | Displays a list of names and MAC addresses of wireless LAN adapters that are connected to the access point. |
| Virtual SSID | Displays the automatically generated virtual SSID. This option is available when a device incompatible with Wi-Fi Direct is connected to this machine. A virtual SSID is displayed on the Wi-Fi (setting) screen of a device incompatible with Wi-Fi Direct. The virtual SSID is displayed with "DIRECTXXXXXX" ("XXXXXX" indicates a combination of the random alphanumeric characters and the specified value of [SSID]). |

(e) [Wired + Wireless (Wi-Fi Direct)]

- [Wired + Wireless (Wi-Fi Direct)] is selected in [Administrator Settings] -> [Network Settings] -> [Network I/F Configuration]
- When optional upgrade kit UK-215 is mounted.

| Awake from ErP | Select the method to return the machine from the ErP Auto Power Off mode. <br> - [OFF]: The machine is not returned from the ErP Auto Power Off mode. <br> - [Awake with Magic Packet]: The machine returns from the ErP Auto Power Off mode when receiving a magic packet. <br> - [Awake with ARP + Unicast Communication]: The machine returns from the ErP Auto Power Off mode when receiving a unicast communication packet. <br> [Awake with Magic Packet] is specified by default. |
| :---: | :---: |
| Simple AP Mode Setting | Manually configure a setting to operate this machine as a Wi-Fi Direct group owner. <br> - [SSID]: Enter the SSID to use this machine as a Wi-Fi Direct group owner (using up to 32 bytes). This option is available when a terminal compatible with Wi-Fi Direct is connected to this machine. The SSID specified here is displayed on the Wi-Fi Direct (setting) screen of the terminal compatible with Wi-Fi Direct. If you cannot connect to this machine by specifying the SSID on the Wi-Fi Direct (setting) screen, specify [Virtual SSID] on the Wi-Fi (setting) screen to make a connection. <br> - [Authentication/Encryption Algorithm]: The algorithm for authentication or encryption is fixed to [WPA2-PSK(AES)]. A passphrase is generated automatically. |
| Wireless Channel Setting | Specify the frequency band and channel required for wireless LAN connection. <br> - [Frequency Band]: Select the frequency band required for wireless LAN connection. <br> - [2.4GHz]: Select the channel to be used for wireless LAN connection of the 2.4 GHz band. Selecting [Auto] searches for a channel that is not being used for other access points, and automatically assigns it to the access point. [Auto] is specified by default. <br> - [5GHz]: Select the channel to be used for wireless LAN connection of the 5 GHz band. Selecting [Auto] searches for a channel that is not being used for other access points, and automatically assigns it to the access point. [Auto] is specified by default. |
| DHCP Server Settings | Configure a setting to use the DHCP server function. |

|  | - [Enable Settings]: Select whether to enable the DHCP server function. [Disabled] is specified by default. <br> - [IPv4 lease address]: Specify the range of IPv4 addresses to be leased from the DHCP server when enabling the DHCP server function. <br> - [Subnet Mask]: Specify the subnet mask of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. <br> - [Lease Period]: Specify the lease period of the IPv4 address to be leased from the DHCP server when enabling the DHCP server function. |
| :---: | :---: |
| No. of Concurrent Devices Allowed | Enter the number of devices that can be connected simultaneously to the access point. [4] devices is specified by default. |
| Signal Strength Setting | Select the radio field intensity of the access point from three levels (Low, Middle, and High). [High] is specified by default. |
| Device Setting | Allows you to check the MAC address of the wireless network adapter. |
| Display Connected Devices | Displays a list of names and MAC addresses of wireless LAN adapters that are connected to the access point. |
| Virtual SSID | Displays the automatically generated virtual SSID. This option is available when a terminal incompatible with Wi-Fi Direct is connected to this machine. A virtual SSID is displayed on the Wi-Fi (setting) screen of a terminal incompatible with Wi-Fi Direct. The virtual SSID is displayed with "DIRECTXXXXXX" ("XXXXXX" indicates a combination of the random alphanumeric characters and the specified value of [SSID]). |

### 2.11.5 Network Settings-IWS Settings

## NOTE

- It will be displayed when [Administrator Settings] -> [Security Settings] -> [FIPS Settings] is set to "Disable."

## (1) Use

- To configure the settings of the WebDAV server which is used to transfer data in the IWS (Internal Web Server) function.
(2) Default setting
- OFF
(3) Setting item
- ON
- OFF

## (4) Procedure

- When selecting [ON], configure the following settings.

1. Set the port number in [Port Number] (Web Server/Application Installation) using the 10-key pad.
2. Set Allow/Restrict for the connection of application in [Connect IWS Apps to Network].
3. Select whether to allow an external application to operate the IWS application on this machine in [Permit Access for Communication between the applications].
4. Select whether to notify you of the user name and password of the user who is using this machine, when the IWS application on this machine operates that of a different device in [Login Information Notification Settings].
5. The following settings are available when the IWS application has been registered.

- Print Data Conversion Setting: Select a print data conversion application.
- Authentication Screen Setting: Select an authentication screen application.
- Background Application Setting: Select a background application.
- Application List: Display the list of the registered applications (up to 50 applications)
- Administrator Password Change Setting: It will be displayed when [Administrator Settings] -> [Security Settings] -> [Administrator Password Change Permission Setting] -> [IWS Application] is set to "Allow." Specify whether to allow a change of the administrator password for each IWS application.

### 2.11.6 Network Settings - Remote Panel Settings (outline)

- It will not be displayed when [Service Mode] -> [Enhanced Security] -> [CE Authentication] is set to "OFF."
- Issue and install the self-signed certificate from Device Certificate Setting under Security Setting of PageScope Web Connection.
- Enable CE Password.
- The control panel of this machine can be operated remotely from a computer on the network.
- During remote operations, display on the control panel can be masked to thereby lock the operation on the machine side (the machine control panel is forced into the locked state when the machine is set into the service mode through remote operation).
- The control panel can also be unlocked through remote operation. The machine control panel is enabled when unlocked remotely.
- Operations performed through the machine control panel while it is in the unlocked state can be reflected in the remote panel side.
- The remote operations are disabled under the following conditions:
- Service mode operations are being performed on the machine.
- Remote operations are already performed from another PC.

## (1) Methods of the Remote panel

- The following two methods are available for operating the control panel.

| Using the dedicated software |  |
| :--- | :--- |
|  |  |

- This method uses the dedicated software that collects screen information of the control panel of this machine periodically, and operates the control panel from a computer on the network.
- You must prepare a dedicated remote control software program and server. Despite the burden, this method enables you to control the machine remotely even from a computer located outside the router network.
- This method accesses this machine directly from another computer on the network, and operates the control panel of the machine using a Web browser.
- A dedicated remote control software program is not required, but the computer used for the remote control must be able to access this machine.
2.11.7 Network Settings - Remote Panel Settings (Server Settings)
(1) Use
- To access this machine directly and control the control panel of the machine remotely, select [ON].
(2) Default setting
- OFF
(3) Setting item
- ON
- OFF
(4) Procedure
- If $[O N]$ is selected, configure the following settings.
(a) <Server Settings - Password Authentication>
- Select whether to request password entry for connecting with this machine. To request for a password entry, select [Yes], and enter the password (using up to 64 characters).
(b) <Server Settings - IP Filtering (Permit Access)>
- Select [Enable] to specify IP addresses allowed to access. Also enter the range of IP addresses allowed to access.
(c) <Port Number>
- To set the port number.

NOTE
Starting the remote operations
Access the machine web server (URL: https://IP_address_of_MFP:Port_Number/panel/top.html) through the web browser.

- If Password Authentication is set, enter the set password.
- If IP Filtering is enabled, connection can be established only through the authorized address.

### 2.11.8 Network Settings - Remote Panel Settings (Client Settings)

(1) Use

- To control the control panel of this machine remotely using the dedicated software, select [ON].
(2) Default setting
- OFF
(3) Setting item
- ON
- OFF
(4) Procedure
- If [ON] is selected, configure the following settings.
(a) <Port No.>
- To set the port number.
(b) <Connection Timeout>
- To set the time-out time. (60 Second is specified by default)
(c) <Server Address>
- Enter the address of the server where the dedicated software was installed.
(d) <Certificate Verification Level Settings>
- To verify the server certificate, configure settings to verify the certificate.

| Expiration Date | Select whether to check that the server certificate is within the validity period. |
| :--- | :--- |
| Key Usage | Select whether to check that the server certificate is used according to the purpose approved by <br> the issuer. |
| Chain | Select whether to check that the server certificate chain (certification path) is correct. |
| Expiration Date Confirmation | Select whether to check that the server certificate is within the validity period. The OCSP service <br> and CRL (Certificate Revocation List) are checked in this order when the expiration date of the <br> certificate is checked. |
| CN | Select whether to check that the CN of the server certificate matches the server address. |

(e) <Synchronize WebDAV Client Setting>

- Select whether to use the proxy server for WebDAV transmission as a proxy server for the server where the dedicated software was installed.
- To use a different proxy server, select [Individual Settings] and enter the proxy server information.

## (f) <Launch Remote Panel from vCare>

- To set whether or not to allow the remote panel to be started from the remote diagnosis system.

### 2.11.9 Machine Update Settings - Internet ISW Settings

- This is displayed when [Function Setting] is set to [ON] in [Service Mode] -> [Machine Update Setting] -> [Internet ISW] -> [Internet ISW Set].

## (1) Update Firmware at Specified Time

- This is displayed when [Open Mode Settings] is set to [Set] in [Service Mode] -> [Machine Update Setting] -> [Internet ISW] -> [Internet ISW Set].
(a) Use
- To update the downloaded firmware at the specified time.
(b) Default setting
- No
(c) Setting item
- Yes
- No
- If [Yes] is selected, set the time to update the firmware.

## (2) FTP Server Settings

- This is displayed when [FTP data acquisition setting] is set to [ON] in [Service Mode] -> [Machine Update Setting] -> [Internet ISW] -> [FTP Setting].
(a) Use
- To set whether to connect via a proxy server to access the FTP server.
- To configure the settings related to the server for connection via a proxy server.
(b) Default setting
- OfF
(c) Setting item
- ON
- OFF
(d) Procedure
- If [ON] is selected, configure the following settings.

1. Touch [Host Address] in [Proxy Server Address] to set the host address of the proxy server.
2. Set the port number used to access the proxy server in [Proxy Server Port Number].

## (3) Firmware Update Parameters

- This is displayed when [Open Mode Settings] is set to [Set] in [Service Mode] -> [Machine Update Setting] -> [Internet ISW] -> [Internet ISW Set].
(a) Use
- To download and update the firmware.
- When you wish to update the firmware at the specified time, after downloading it in the way described here, you can specify the time in [Update Firmware at Specified Time].
(b) Procedure

1. Touch [Download] in [Administrator Settings] -> [Network Settings] -> [Machine Update Settings] -> [Internet ISW Settings] -> [Firmware Update Parameters].
2. Select [Yes] in the confirmation screen and touch [OK].
3. The firmware download starts.
4. The message to show the status will be displayed on the screen while connecting and transferring data.
5. Select [Upgrade] or [Delete].

- Touching [Upgrade] starts updating using the downloaded firmware data. Select [Yes] in the confirmation screen and touch [OK]
- Touching [Delete] will delete the downloaded firmware data. Select [Yes] in the confirmation screen and touch [OK].

6. When the firmware is normally upgraded, the main body will automatically be restarted to complete the Internet ISW

NOTE

- To download the firmware, in addition to the necessary proxy settings configured in [FTP Server Settings], you need to configure appropriate settings in [Service Mode] -> [Machine Update Setting] ->[Internet ISW] -> [HTTP Setting], [FTP Setting], and [Forwarding Access Setting].

### 2.11.10 Machine Update Settings - Machine Auto Update setting

- Obtain the update file for this machine from the file storage server to update the firmware or settings of the machine.
- This function is same as that of the service mode, but it will not be used together with the function of the service mode.
- Refer to Procedures for rewriting the firmware by using the Auto Update function for how to create an update file.

## (1) Auto Update Settings for This Machine

(a) Use

- To obtain the update file from the specified location, and configure settings to update the machine at the specified time.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF
(d) Procedure

If [ON] is selected, configure the following settings.
When configuring the settings for SMB with the download protocol
NOTE

- If the machine relay server is used as a server on the data providing side, the SMB protocol will not be used.
- <Host Name>: Set the host name of the SMB server.
- <File Path>: Set the file path used in the SMB server communication.

NOTE

- Specify the folder in which C_UpdateList.ini is stored. Refer to Procedures for rewriting the firmware by using the Auto Update function for details.
- <User Name>: Set the user name used to access the SMB server.
- <Password>: Set the password used to access the SMB server.
- <Number of retries>: Set the number of times to retry when failed to obtain.
- <Update Time>: Touch Clear to set the time to update the machine.
- <Polling Interval>: Set the polling period for obtaining the update list.
- <Retry Interval>: Set the period for retrying when failed to obtain.

When configuring the settings for HTTP with the download protocol

- <URL>: Set the address of the http server.

NOTE

- Specify the folder in which C_UpdateList.ini is stored. Refer to Procedures for rewriting the firmware by using the Auto Update function for details.
- <User Name>: Set the user name used to access the http server.
- <Password>: Set the password used to access the http server.
- <Proxy>: Select whether to use the proxy server.

NOTE

- If [ON] is selected, set the proxy with [Administrator Settings] -> [Network Settings] -> [Machine Update Settings] -> [ HTTP Proxy Settings ].
- <Connection Timeout>: Set the timeout period for connecting to the server.
- <Update Time>: Touch Clear to set the time to update the machine.
- <Polling Interval>: Set the polling period for obtaining the update list.
- <Retry Interval>: Set the period for retrying when failed to obtain.

## (2) Relay Server Function Setting

Obtain an update relay data, and configure settings for the relay server function which enables the file to be shared with the other machine.
(a) Update File Download

- Set a relay server to obtain the update relay data from file storage server.
- When [ON] is selected, configure the following settings.
- [OFF] is default.

Procedure

- <URL>: Set the address of the file storage server.

NOTE

- Specify the folder in which S_UpdateList.csv is stored. Refer to Firmware relay procedures by using "relay server function" for details.
- <User Name>: Set the user name used to access the file storage server.
- <Password>: Set the password used to access the file storage server.
- <Proxy>: Select whether to use the proxy server. NOTE
- If [ON] is selected, set the proxy with [Administrator Settings] -> [Network Settings] -> [Machine Update Settings] -> [ HTTP Proxy Settings ].
- <Polling Interval>: Set the polling period for obtaining the update list.
- <Retry Interval>: Set the period for retrying when failed to obtain.
- <Connection Timeout> Set the timeout period for connecting to the server.
(b) Authentication Setting
- Configure the authentication settings of access management works as an update relay data sharing server.
- When [ON] is selected, configure the following settings.
- [OFF] is default.

For SMB Setting

- DO NOT use the SMB setting

For HTTP Setting

- <User Name>: Set the user name used to access the relay server by http protocol.
- <Password>: Set the password used to access the relay server.

NOTE

- Once a password is set, be sure not to forget it. It is required for reset.
- Please refer to "Download the firmware opened from the relay server by using the Auto Update function on the other MFP" for the file path of relayed data.

## (3) Log TX setting

(a) Update File Download/Update Log

- Save the update file download log for auto update of the machine, and send it to the specified location.
- When $[O N]$ is selected, configure the settings for transmission protocol.
- [OFF] is default.

For PC (SMB)

- <Host Name>: Set the host name of the SMB server.
- <File Path>: Set the file path used for SMB server communication.
- <User Name>: Set the user name used to access the SMB server.
- <Password>: Set the password used to access the SMB server.

For WebDAV

- <URL>: Set the address of the WebDAV server.
- <User Name>: Set the user name used to access the WebDAV server.
- <Password>: Set the password used to access the WebDAV server.
- <Proxy>: Select whether to use the proxy server. NOTE
- If [ON] is selected, set the proxy with [Administrator Settings] -> [Network Settings] -> [Machine Update Settings] -> [ HTTP Proxy Settings ].
(b) Relay Update File Download Log
- Save the log related to update relay data download for the relay server, and send it to the specified location.
- When [ON] is selected, configure the settings for transmission protocol.
- [OFF] is default.

For PC (SMB)

- <Host Name>: Set the host name of the SMB server.
- <File Path>: Set the file path used for SMB server communication.
- <User Name>: Set the user name used to access the SMB server.
- <Password>: Set the password used to access the SMB server.

For WebDAV

- <URL>: Set the address of the WebDAV server.
- <User Name>: Set the user name used to access the WebDAV server.
- <Password>: Set the password used to access the WebDAV server.
- <Proxy>: Select whether to use the proxy server.

## NOTE

- If [ON] is selected, set the proxy with [Administrator Settings] -> [Network Settings] -> [Machine Update Settings] -> [ HTTP Proxy Settings ].

## (4) Log Confirmation

- Check the log related to update file download for auto update of the machine or update relay data download for relay server
- The latest five logs can be checked.
(5) Immediate Update
- This is displayed when [Auto Update Settings for This Machine] is set to [ON] in, [Administrator Settings] -> [Network Settings] -> [Machine Update Settings] -> [Machine Auto Update setting] with the following condition.
- This is displayed when the update file for auto update settings has been downloaded in HDD.
(a) Use
- To conduct Machine Auto Update manually.
(b) Procedure
- Touch [Immediate Update] to start update.
- Touch [Yes] on the confirmation screen, and touch [OK]. NOTE
Do not set the power to OFF under the following state.
- It takes about 45 seconds from touching [Immediate Update] -> [Start] to the next operation of the MFP (Auto Power OFF).
- About one minute after the download completed screen being displayed, the MFP will restart.
- When rewriting configuration files followed by the firmware, the MFP will restart again.

## (6) Machine Update Password

(a) Use

To set a password used to decrypt the configuration file(s) of the machine.

## (b) Procedure

Enter the decryption password using the on-screen keyboard.

- <Current Password>: Enter the currently used decryption password (only when the decryption password has been set).
- <New Password>: Enter the new decryption password.
- <Password Confirmation>: Enter the new decryption password again.

NOTE

- Once a password is set, be sure not to forget it. It is required for reset.
- Please refer to Procedures for rewriting the firmware by using the Auto Update function for how to make the configuration file(s).

### 2.11.11 Machine Update Settings - HTTP Proxy Settings

(1) Use

- To select whether to connect via a proxy server to access the http server.
- To configure the settings of the server related to connection via a proxy server.
(2) Default setting
- OFF
(3) Setting item
- ON
- OFF
(4) Procedure
- If [ON] is selected, configure the following settings.

1. Touch [Host Address] in [Proxy Server Address] to set the host address of the proxy server.
2. Set the port number used to access the proxy server in [Proxy Server Port Number].
3. Select whether to perform an authentication to access a proxy server. If [ON] is set, enter the user name and password.

### 2.11.12 Security Settings - Prohibited Functions When Authentication Error

(1) Use

- To set the function for prohibiting authentication operation in order to prevent the unauthorized access.
- To use when setting the system to prohibit authentication failure when conducting authentication by password, etc.
- Authentications which are subjected to this function: CE authentication, administrator authentication, user+ accounts authentication, SNMP authentication, secure print authentication, user box authentication.
(a) Mode

| Mode 1 | When failed to authenticate, authentication operation (entering the password) will be prohibited <br> for a certain period of time. |
| :--- | :--- |
| Mode 2 | - When failed to authenticate, authentication operation (entering the password) will be <br> prohibited for a certain period of time. The number of times failure occurred will be counted, <br> and when the number reaches to the specified time, authentication will be prohibited and <br> the access will be locked. <br> When the machine goes into an access lock condition, release the lock in the following <br> procedure. |

(b) Authentications

| User \& Accounts authentication | - Touch keys in the following order. [Administrator Settings] -> [Security Setting] -> [Security Details] -> [Prohibited Functions When Authentication Error]. Then touch [Release]. |
| :---: | :---: |
| SNMP authentication |  |
| Secure print authentication |  |
| User Box authentication |  |
| WebDAV Server authentication |  |
| Remote Panel authentication |  |
| Administrator authentication | - After the main power switch is turned OFF and ON, the access lock is released automatically after the lapse of a predetermined period of time. |
|  | - [Service Mode] -> [Enhanced Security] -> [Administrator unlocking] |
| CE authentication | 1. Main power switch is turned OFF and ON. <br> 2. Touch Menu -> [Counter] -> [Print List]. <br> 3. Touch [Display Keypad], displaying 10-key pad. <br> 4. The lock release timer starts to operate by input the Stop -> 0 -> 9 -> 3 -> 1 -> 7 <br> 5. When the timer reaches the time specified in this setting, the access lock is released. |

## (2) Default setting

- Mode 1

## (3) Setting item

- Mode 1
- Mode 2

NOTE

- If [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to "ON", selecting "Mode 1" in this setting cancels enhanced security mode.
Only the number of times for trials up to the access lock can be changed.
- When [Mode 2] is selected, set the number of times where checks are made before access is locked.
(4) Procedure
- Touch [Release Time Settings] and set a period of time that elapses before access lock is released.

### 2.11.13 Security Settings - Enhanced Security Mode

(1) Use

- To set whether or not to enhance security.
- To use when enhancing the security function at user's option.
- The following settings are necessary for setting the security enhancement "ON".

| Administrator Password | Change it with the one which meets password rules. |
| :--- | :--- |
| User Authentication | Set to "ON (MFP)", "External Server Authentication", or "Main + External Server". |
| HDD encryption word | Set the encryption word with 20 characters. |
| SSL Certificate | Register self-certificate for SSL communication from the PSWC. |
| CE Password | Change it with the one which meets password rules. |
| CE Authentication | Set to [ON]. |
| Image Controller Setting | Set to [Controller 0]. |
| Management Function Choice | Set to "Unset." |

(2) Default setting

- OFF
(3) Setting item
- ON
- OFF

NOTE
" Note that setting Enhanced Security Mode to "ON" disables the following functions.

- Print Data Capture (forcibly prohibited when Enhanced Security Mode is set to "ON")
- In CS Remote Care, the following operation is prohibited.
- Rewriting instructions of firmware, communication of the account track counter information, the setting renewal of the machine.
- Firmware upgrading through Internet ISW (When the Enhanced Security Mode is set to ON, the setting of this function cannot be changed from "OFF.")
- Setting the Enhanced Security Mode "ON" will change the setting values for the following functions.
" In addition, the indicator of "not be changed" below indicates that the settings cannot be changed while Enhanced Security Mode is maintained "ON".

| Function Name |  | Default Setting | When Enhanced Security mode is set to [ON] |
| :--- | :--- | :---: | :--- |
| Password Rules | To apply the password rule to <br> enhance security. | Disable | Enable (not to be changed) |
| Prohibited Functions <br> When Authentication <br> Error | To set the function for <br> prohibiting Authentication <br> operation in order to prevent <br> the unauthorized access. | Mode 1 | Mode 2 (not to be changed): Three times is set. <br> * The number of times can be changed to once, <br> twice, or three times. (It is twice, four or six times <br> for WebDAV server password.) |
| Confidential Document <br> Access Method | To display the status of the <br> Authentication system on the <br> control panel for the <br> Confidential document access. | Mode 1 | Mode 2 (not to be changed) <br> * In association with Prohibited Functions When <br> Authentication Error, the method is changed from <br> authentication using Secure Document ID and <br> password (Mode 1) to that using the password with <br> the Secure Document first narrowed down by <br> Secure Document ID (Mode 2). |
| Public User Access | To permit use by a public user <br> having no user registration if <br> user authentication setting has <br> been made. | Restrict | Restrict (not to be changed) |
| User Name List | To display the list key for User <br> names on User Authentication <br> screen. | OFF | OFF (not to be changed) |
| Print without <br> Authentication | To allow or restrict printing <br> which user and account are not <br> specified. | Restrict | Restrict (not to be changed) |

| Function Name |  | Default Setting | When Enhanced Security mode is set to [ON] |
| :---: | :---: | :---: | :---: |
| Counter Remote Control | To select whether or not to allow the Center to acquire counter information managed by the machine when CS Remote Care is used. | Restrict | Restrict (not to be changed) |
| URL Home Settings | To set whether to enable the Scan to URL function. | Enable | Disable (not to be changed) |
| Simple Auth. (Authentication Setting) | You can print from the printer driver using authentication that requires only your user name (without password). | Restrict | Restrict (not to be changed) |
| User Box Administrator Setting | To set whether to allow or restrict the Box Administrator to use the system. | Restrict | Restrict (not to be changed) |
| SSL | To set whether to encrypt access by SSL. | OFF | ON (not to be changed) |
| SSL Encryption Strength | To set the SSL encryption strength for the SSL encryption communication. | AES-256, 3DES-168, RC4-128 | AES/3DES (not to be changed to one containing strength lower than AES/3DES) |
| Automatically Obtain Certificates of S/MIME | - | No | No (not to be changed) |
| S/MIME Encryption Method | - | 3DES | 3DES (not to be changed to DES or RC-2) |
| FTP Server | To set whether to use FTP server or not. | ON | OFF (not to be changed) |
| Server Capacity Reduction Send Method | Select the sending method to reduce the load of the E-mail server (SMTP). | OFF | When [Stop URL when max. limit is exceeded] or [Always Send via URL] is selected, this option is set to [OFF]. |
| SNMPv1/v2c | To use when changing Write setting. | Read/Write enable | Only Read is enabled (not to be changed) |
| SNMP v3 Security Level and auth/priv-password | To set the security level for the Reading/Writing Authority User which is used for SNMP v3. | auth/privpassword | - The security level can be selected from among [auth-password] and [auth/priv-password]. <br> - An 8-digit-or-more auth-password and privpassword can both be set. |
| Print Data Capture | To set whether to allow or restrict capturing the Print Job Data. | Allow | Restrict (not to be changed) |
| Network Setting Clear | To clear the network setting through PageScope Web Connection. | Enabled | Restrict |
| Release Time Settings | To set the period of time to be elapsed before the access lock state is released. | 5 min . | The setting value should be 5 min . or more (no value less than 5 can be set) |
| Destination Registration Change by User (Address Book and Program destination) | - | Allow | Restrict (not to be changed) |
| Secure Print User Box Preview | - | Thumbnail View, Detail View, and Document Details are enabled | Only Detail View is enabled before password authentication (Mode 2) |
| Initialize (Network Settings) | To clear the network related settings. | Enabled | Restrict (not to be changed) |
| Image Log Transfer Settings | Specifies whether to transfer the input or output image data to the server using whenever machine inputs or outputs image data. | OFF | OFF (not to be changed) |
| Machine Update Settings | To set firmware upgrading by Internet ISW, and enable or disable various settings. | No | No (not to be changed) |
| operation Ban release time (CE Authentication) | To set the period of time to be elapsed before the access lock state is released in CE password authentication. | 5 min . | The setting value should be 5 min . or more (no value less than 5 can be set) |
| E-mail RX Print | To print an E-mail attachment, send an E-mail to the E-mail address of this machine. | OFF | OFF (not to be changed) |

| Function Name |  | Default Setting | When Enhanced Security mode is set to [ON] |
| :---: | :---: | :---: | :---: |
| IWS Settings | Set the operating environment of IWS (Internal Web Server) function. | OFF | OFF (not to be changed) |
| Report File Attachment | To set whether to convert a TX result report to a file and attach it to an E-mail. | With Attachment | Without Attachment (not to be changed) |
| Storage data backup | To set whether to permit our service representative to back up or restore the storage on this machine. | Restrict | Restrict (not to be changed) |
| CS Remote Care | CS Remote Care enables the machine and the computer at CS Remote Care center to exchange data through telephone/fax line, network or E-mail in order to control the machine. | Usable | Remote device setting disabled |
| Maintenance Mode Access | To set whether to permit your service representative to change [Administrator Settings] of a device without authentication. | Restrict | Restrict (not to be changed) |
| Simple Connection Setting | To set the pairing method to connect to an Android/iOS device. | - QR Code Display Setting: OFF <br> - Enable NFC: OFF <br> - Enable Bluetooth LE: OFF | - OFF (not to be changed) <br> - OFF (not to be changed) <br> - OFF (not to be changed) |
| Administrator Password Change Permission Setting | Specify whether to allow the administrator password to be changed via the IWS application. | Restrict | Restrict (not to be changed) |
| USB Connection Permission setting | Specify whether to permit a function that requires the USB Port. | Detail Setting | Restrict (not to be changed) |

### 2.11.14 Security Settings - HDD Encryption Setting

(1) Use

- To set the encrypting passphrase.
- To re-set encrypting passphrase due to exchange of SSD board or etc.

## NOTE

- HDD formatting is required after this setting. Therefore it is necessary to retrieve certain data from HDD in advance.

The following data will be lost after HDD formatting.

1. Address data
2. Authentication data: Authentication mode, user authentication setting, account track setting
3. Box setting data: Box and text in the box, setting information of each box, box for fax
4. Job history, fax transmission history

And after setting the HDD encryption key, the movie data, voice data, OCR dictionary data, PDF/A font, OCR font, and Unicode font need to be reinstalled as necessary since these data will be deleted by HDD format.

- If you replace the HDD due to its breakage or other reasons, you can automatically reset the encryption passphrase by installing a new HDD and performing the logical format.
- Make sure to configure the following settings after formatting the HDD.
- Installing the firmware.
- Reinstall movie data, voice data, OCR dictionary data, and PDF/A fonts with the install data function under the service mode.
[Service Mode] -> [System 2] -> [Install Data]
- Make sure to install the firmware after the format of the hard disk. Otherwise a trouble code " C-D012 mount error due to unformatted HDD " will appear.
(2) Procedure

1. Press [HDD Encryption Setting].
2. Enter encryption passphrase ( 20 characters) with the keyboard on the operation panel and press [OK].

NOTE

- Double-byte and identical characters are not acceptable.

3. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
4. Open [Administrator Settings] and conduct HDD formatting according to the instruction appeared on the panel.
5. Turn OFF the main power switch and turn it ON again more than 10 seconds after.

### 2.11.15 Security Settings - Debug Log Encryption Settings

(1) Debug Log Encryption Settings
(a) Use

- To set a password used to encrypt debug data when storing it into the HDD.
(b) Default setting
- 01234567890123456789
(c) Procedure
- Enter an encryption passphrase from the on-screen keyboard.

1. Enter the encryption passphrase currently in use.
2. Encryption Passphrase: Enter a new encryption passphrase.
3. Encryption Passphrase Confirmation: Re-enter the new encryption passphrase.

### 2.11.16 Security Settings - Image Log Transfer Settings (Type1)

NOTE
" This is displayed only when Switch No. "63" is set to [00000001] at Bit assignment/[01] at HEX assignment (Type 1) or [00000010] at Bit assignment/[02] at HEX assignment (Type 2) in [Service Mode] -> [System 2] -> [ Software Switch Setting ].
(1) Use

- Specifies whether to transfer the input or output image data to the server using whenever machine inputs or outputs image data. Makes the settings of the WebDAV Server, the FTP Server, or the SMB Server where image data are transferred.
- Use this settings to keep logs of input and output image data for security purpose.
(2) Default setting
- OFF
(3) Setting item
- ON
- OFF
(4) Procedure
- When selecting [ON], configure the following settings.

1. Select Forwarding Destination and configure the sever settings. For details of the server setting, refer to Table 1: Server setting.
2. Specify Audit Item. For details of the audit item, refer to Table 2: Audit item.
Table 1: Server setting

| WebDAV Server setting | Host Name, File Path, User Name, Password, Port Number, Proxy, <br> SSL Settings |
| :--- | :--- |
| FTP Server setting | Host Name, File Path, User Name, Password, Port Number, PASV, <br> and Proxy |
| SMB Server setting | Host Name, File Path, User Name, Password |

Table 2: Audit item

| All Items | Applied to Fax TX, Fax RX, Scan, and Others. |
| :--- | :--- |
| Individual Item | Can be selected from Fax, Fax RX, and Scan. |

### 2.11.17 Security Settings - Image Log Transfer Settings (Type2)

NOTE

- This is displayed only when Switch No. "63" is set to [00000001] at Bit assignment/[01] at HEX assignment (Type 1) or [00000010] at Bit assignment/[02] at HEX assignment (Type 2) in [Service Mode] -> [System 2] -> [ Software Switch Setting ].
(1) Use
- To select whether or not to transfer only input/output images in Fax TX/RX to the server when image data is input or output to or from the machine.
(2) Default setting
- OFF
(3) Setting item
- ON
- OFF
(4) Procedure
- When selecting [ON], configure the following settings.

1. Configure the file type and scan setting.
2. Select Forward or Do Not Forward for Fax TX/RX. To transfer data, select [Forwarding Dest.] and configure the server settings.

| FTP Server setting | Host Name, File Path, User Name, Password, Port Number, PASV, <br> and Proxy |
| :--- | :--- |
| SMB Server setting | Host Name, File Path, User Name, Password |

WebDAV Server setting $|$| Host Name, File Path, User Name, Password, Port Number, Proxy, |
| :--- |
| SSL Settings |

### 2.11.18 Security Settings - Driver Password Encryption Setting

(1) Use

- To set whether to use the factory default encryption word or user-defined one as a common key that encrypts a password used for a print job.

| User-Defined | Sets an encryption word. Enter an encryption word of 20 letters. |
| :--- | :--- |
| Use Factory Default | Uses the factory default encryption word (undisclosed predefined encryption key). |

## NOTE

- When selecting [User-Defined], set an encryption key being consisted of the same letters in the printer driver. If the encryption word set in the machine differs from the encryption key set in the printer driver, different encrypted passwords are created and printing cannot be made.
- The use of OpenAPI allows an encryption key to be obtained from the machine.
(2) Default setting
- Use Factory Default
(3) Setting item
- User-Defined
- Use Factory Default

### 2.11.19 Security Settings - Quick Security Setting - Administrator Password

(1) Use

- To set/change the administrator password.
(2) Procedure
- Enter the administrator password on the on-screen keyboard.

1. Enter the current administrator password
2. Password: Enter the new administrator password to be used
3. Password Confirmation: Re-enter the new administrator password

## NOTE

- When "Enable" is selected in [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Password Rules], the following passwords cannot be accepted: password of single repeated characters, password same as the one before being changed, and password where the number of characters is less than the minimum number specified in [Set Minimum Password Length].

### 2.11.20 Security Settings - Quick Security Setting - USB Enable Settings

(1) Use

- To set whether to permit a function that requires the USB Port.

| Save Document | Select whether to allow users to save files on a USB memory. <br> This function is available when [Individual Settings] is selected in [Security Settings] -> [USB Connection <br> Permission setting] -> [Detail Setting] -> [External Memory (User)]. |
| :--- | :--- |
| Print Document | Select whether to allow users to print files from USB memory. <br> This function is available when [Individual Settings] is selected in [Security Settings] -> [USB Connection <br> Permission setting] -> [Detail Setting] -> [External Memory (User)]. |
| External Memory <br> Document Scan | Select whether to allow users to save files from a USB memory into a User Box. <br> This function is available when [Individual Settings] is selected in [Security Settings] -> [USB Connection <br> Permission setting] -> [Detail Setting] -> [External Memory (User)]. |
| Print PC | Select whether to enable to print files from a USB-connected computer. <br> This function is available when [Individual Settings] is selected in [Security Settings] -> [USB Connection <br> Permission setting] -> [Detail Setting] -> [PC Connection]. |

(2) Default setting

- Save Document: Restrict
- Print Document: Allow
- External Memory Document Scan: Restrict
- Print PC: Allow

### 2.11.21 Security Settings - Quick Security Setting - Password Rules

(1) Use

- To set whether to apply the password rules.
- To apply the password rule to enhance security.
- Passwords to be covered: CE password, administrator password, user password, account track password, public user box password, user box administrator password, passwords for confidential documents, WebDAV server password, SNMPv3 Write User password, remote panel server password, Encryption Passphrase
- Details of the password rules:
- Minimum number of characters specified in [Set Minimum Password Length] (Default: 12 characters)
- Upper- and lower-case letters are distinguished in alphabetical letters.
- Only one-byte symbols can be used.
- Password with only the same letter is prohibited.
- Password same with the one prior to change is prohibited.

NOTE

- When the password rule is set to [Enable], the password cannot be changed or registered unless it follows the above conditions.
- When [Enable] is selected, it is possible to determine the minimum number of characters that a password can contain. (8 to 64 characters, Default: 12 characters)
(2) Default setting
- Disable
(3) Setting item
- Enable
- Disable

NOTE
" If [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to "ON", selecting "Disable" in this setting cancels enhanced security mode.
" [Enable] cannot be selected when [Service Mode] -> [Enhanced Security] -> [CE Authentication] is set to "OFF." "OFF" setting of [CE Authentication] will not be displayed and cannot be set to "OFF" when [Password Rules] is set to "Enable."

### 2.11.22 Security Settings - Quick Security Setting - Quick IP Filtering

(1) Use

- A function that only allows access to the MFP from devices within the same IP group.
- Determine the receiving IP for the decided IP when setting the address to the MFP by DHCP or manually.
(2) Default setting
- Synchronize IP Address (except for North America and Europe)
- No Filtering (North America and Europe)

## (3) Procedure

- Quick IP Filtering activates automatically.
(a) Synchronize IP Address
- IPv4 address: Only reception by an IP address with the upper 3 bites same as that of the IP address set in the MFP is allowed. NOTICE
- If the MFP IP address is set to [192.168.0.134], the filtering range is as follows. 192.168.0.0 to 192.168.0.255
- IPv6 address: Only Global Unicast Address (2000::/3) is available. Only reception by an IP address with the upper 64 bits same as that of the IP address set in the MFP is allowed.
NOTICE
- If the MFP IP address is set to "2345:1:2:3:4:5:6:7", the filtering range is as follows.

2345:1:2:3::0 to 2345:1:2:3:FFFF:FFFF:FFFF:FFFF
(b) Synchronize Subnet Musk

- IPv4 address: Use the IP address set in the MFP and the Subnet Mask to allow receptions by IP addresses within the range belongs to the same network.
NOTICE
- If the MFP IP address is set to [150.16.17.134] and the Subnet Mask is set to [255.255.252.0], the filtering range is as follows. 150.16.16.*** to 150.16.19.****
- If the Subnet Mask has not been set, or it has been set to [0.0.0.0], only accesses from the IP address with the end differs from that of the IP address set in the MFP are restricted. As a result, filtering runs in the same way as that it has been set in [Synchronize IP Address].
- IPv6 address: Only Global Unicast Address (2000::/3) is available. And use the Global IP address and Prefix to perform filtering. NOTICE
- If the MFP IP address is set to [IP address=2345:1:2:3:4:5:6:7], and the Prefix is set to [/64], the filtering range is as follows. 2345:1:2:3::0 to 2345:1:2:3:FFFF:FFFF:FFFF:FFFF
- If the Prefix has not been set, filtering runs in the same way as that the Prefix is set to 64 bit.
(c) No Filtering
- For both IPv4 address and IPv6 address, no filtering is performed.

### 2.11.23 Security Settings - Quick Security setting - PSWC Setting

(1) Use

- To set whether to use the PageScope Web Connection.

## NOTE

- To use the PageScope Web Connection, enable "JavaScript" and "Cookie" of the Web browser.
- If this machine is connected to the internet via a proxy server, register the Proxy Settings of the Web browser as "Exceptions".
- When the PageScope Web Connection is not displayed properly even if the above settings have been conducted, delete the cache of the Web browser.

## (2) Default setting

- ON
(3) Setting item
- ON
- OFF

### 2.11.24 Security Settings - Quick Security setting - Security Warning Display Setting

(1) Use

- To select whether or not to display the security warning screen if an administrator password is still remained as default setting or does not meet the password rules.
(2) Default setting
- ON (except for North America and Europe)
- OFF (North America and Europe)
(3) Setting item
- ON
- OFF

### 2.11.25 License Settings

(1) Get Request Code
(a) Use

- To display and print a request code and serial number used to activate i-Option.
(b) Procedure

1. Touch [Get Request Code], and [Yes].
2. A serial number and request code are issued.
3. By touching [Print], the serial number and request code are printable.
(2) Install License

- It is displayed when this machine is equipped with an optional upgrade kit UK-211.
(a) Use
- To allow administrator to activate functions provided by i-Option.
- The functions can be activated by entering Function/License Code or Token Code.
- By making settings in [Service Mode] -> [Billing Setting], CE can also activate functions provided by i-Option.

NOTE

- When activating i-Option, MFP accesses to KM license server via WebDAV connection. Set the proxy server setting in [Administrator Settings] -> [Network Settings] -> [WebDAV Settings] -> [Proxy Setting for Remote Access] as occasion demands.
- For accessing to KM license server, it is necessary to select "Fixed Address" in [Service Mode] -> [Billing Setting] -> [WebDAV Server Setting].
" When the server connection error "MAE001" is displayed, check the network settings.
" When the internal error "MAI001" is displayed, repair the license management information in [Service Mode] -> [Billing Setting] .
(b) Procedure (Function/License Code)

1. Touch [Install License].
2. Touch [Function/License Code].
3. Touch [Function Code].
4. Enter the Function Code.
5. Touch [OK].
6. Touch [License Code].
7. Enter the license code that was issued in the license management server using the key board on the control panel, and touch [OK].
8. Touch [Install].
9. Confirm the message, select [Yes], and touch [OK].
10. Turn OFF and ON the main power switch.
(c) Procedure (Token Code)
11. Touch [Token Code].
12. Touch one of the Token Codes 1 to 10.
13. Enter the Token Code.
14. Touch [OK].
15. Touch [Install].
16. Confirm the message, select [Yes], and touch [OK].
17. Turn OFF and ON the main power switch.
(3) List of Enabled Functions

- It is displayed when this machine is equipped with an optional upgrade kit UK-211.
(a) Use
- To display currently activated functions.

### 2.11.26 Voice Guidance Settings-Voice Guidance

## (1) Use

- To select whether or not to enable the voice guidance function.
- Selecting [ON] allows you to configure the settings on the voice guidance function in the [Accessibility] screen.

NOTE

- To use voice guidance, optional upgrade kit UK-211 (not required for bizhub C658/C558/C458) and i-Option LK-104 v3 must be activated, and optional local interface kit EK-608 or EK-609 must be mounted.
(2) Default setting
- OFF
(3) Setting item
- ON
- OFF

### 2.11.27 External Memory Backup - Import/Export

- It will be displayed when [Service Mode] -> [System 2] -> [Software Switch Setting] shows that switch No. 72 is set to [00000100] at Bit assignment/[04] at HEX assignment.
(1) Use
- To export various types of setting information to an external memory (USB memory).
- To import various types of setting information from other machine via the USB memory
- Types of data that can be exported and imported: Address Book, Authentication Data, Network Settings, Remote Access Setting *, User Setting, Administrator Setting, Custom Display Settings, External Certificate NOTE
- *: Only importing Remote Access Setting is allowed; exporting it is not allowed.
(2) Procedure (Import)

1. Connect the external memory to the machine.
2. Touch [Import].
3. Touch [Password], enter the password previously set for the import data, and touch [OK]
4. Touch [Start].
5. Import results appear

NOTE

- If an error occurs in importing an external certificate, the certificate is returned to the state before it is imported.
- Import errors of external certificates are determined in following cases:
- Importing a certificate fails.
- The number of imported certificates exceeds the limit.
(3) Procedure (Export)

1. Connect the external memory to the machine.
2. Touch [Export].
3. Select the item to be exported.
4. Touch [Password], enter the password of the export data, and touch [OK]
5. Touch [Start].
6. Export results appear

### 2.11.28 Remote Access Setting - Import/Export User Data

(1) Use

- To set whether to remotely rewrite (import or export) user data such as address information using the CS Remote Care.
(2) Default setting
- Restrict

## (3) Setting item

- Allow
- Restrict

## 3. ADJUSTMENT ITEM LIST

### 3.1 Replace feed roller, pick-up roller, separation roller (tray 1, tray 2)

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace feed roller, pick-up roller, <br> separation roller (tray 1, tray 2) | [Service Mode] / [Counter] / [Life] / [Counter Clear] | 1 |

### 3.2 Replace feed roller, separation roller assy (manual bypass tray)

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :---: | :--- | :---: |
| Replace feed roller, separation roller assy | [Service Mode] / [Counter] / [Life] / [Counter Clear] | 1 |

### 3.3 Install LCT (Built-in)

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :--- |
| Install LCT (Built-in) | [Service Mode] / [System2] / [LCT (Built-in) Size Settings] | 1 |
|  | [Service Mode] / [Machine] / [Printer Area] / [Printer Image Centering Side 1] | 2 |
|  | [Service Mode] / [Machine] / [Printer Area] / [Prt. Image Center. Side 2 (Dup)] | 3 |
|  | [Service Mode] / [Machine] / [Printer Area] / [Tray Printing Position: Tip] | 4 |

### 3.4 Replace CCD board

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :---: | :---: | :---: |
| Replace CCD board | [Service Mode] / [System2] / [CCD Calibration] | 1 |
|  | [Service Mode] / [System2] / [Line Mag Setting] | 2 |
|  | [Service Mode] / [Machine] / [Printer Area] / [Paper Feed Direction Adj.] | 3 |
|  | [Service Mode] / [Machine] / [Scan Area] / [Main Scan Zoom Adj.] | 4 |
|  | [Service Mode] / [Machine] / [Scan Area] / [Scanner Image Side Edge] | 5 |
|  | [Service Mode] / [Machine] / [Scan Area] / [Image Position: Leading Edge] | 6 |

### 3.5 Replace developing unit

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace developing unit | [Service Mode] / [Imaging Process Adjustment] / [Gradation Adjust] | 1 |

### 3.6 Replace drum unit

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace drum unit | [Service Mode] / [Imaging Process Adjustment] / [Gradation Adjust] | 1 |

### 3.7 Replace transfer belt unit

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace transfer belt unit | [Service Mode] / [Counter] / [Life] / [New Release] | 1 |
|  | [Service Mode] / [Imaging Process Adjustment] / [Gradation Adjust] | 2 |

### 3.8 Replace fusing unit

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace fusing unit | [Service Mode] / [Counter] / [Life] / [New Release] | 1 |

### 3.9 Replace PH unit

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :--- |
| Replace PH unit | [Service Mode] / [Machine] / [Print Head Skew Adj.] / [Print Head Skew Reset] | 1 |
|  | [Service Mode] / [Machine] / [Printer Area] / [Leading Edge Adjustment] | 1 |
|  | [Service Mode] / [Machine] / [Printer Area] / [Printer Image Centering Side 1] | 2 |

### 3.10 Replace original size detection sensor

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :---: | :--- | :---: |
| Replace original size detection sensor | Installation of original size sensor | 1 |
|  | [Service Mode] / [State Confirmation] / [Sensor Check] | 2 |

### 3.11 Replace scanner motor

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace scanner motor | Scanner motor belt adjustment | 1 |

### 3.12 Replace scanner home sensor

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace scanner home sensor | [Service Mode] / [Machine] / [Scan Area] / [Image Position: Leading Edge] | 1 |

### 3.13 Replace MFP board

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace MFP board | • bizhub C368/C308/C258: Entering the machine type information <br> • bizhub C658/C558/C458: Entering the machine type information | 1 |
|  | Installing the firmware | 2 |
|  | Restore (backup) data | 3 |
|  | [Service Mode] / [Imaging Process Adjustment] /[Gradation Adjust] | 4 |

### 3.14 Replace eMMC board

| Replacement part/Service job |  | Adjustment/setting items |
| :--- | :--- | :---: |
| Replace eMMC board | Installing the firmware | 1 |

## NOTE

- Contact Konica Minolta technical support if the eMMC board needs to be replaced.

### 3.15 Replace original glass

| Replacement part/Service job |  | Adjustment/setting items |
| :--- | :--- | :---: | Procedure

### 3.16 Replace hard disk

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :---: | :---: | :---: |
| Replace hard disk | [Service Mode] / [State Confirmation] / [Memory/Storage Adjustment] / [Format] | 1 |
|  | [Service Mode] / [State Confirmation] / [Memory/Storage Adjustment] / [Storage R/W Check] | 2 |
|  | [Service Mode] / [State Confirmation] / [Memory/Storage Adjustment] / [HDD Mirroring Rebuild] | 3 |

### 3.17 Replace control panel unit

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace control panel unit | Touch panel calibration | 1 |
|  | [Accessibility]/[Touch Panel Adjustment] | 2 |

### 3.18 Replace DF control board (when DF is mounted)

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace DF control board | Installing the firmware | 1 |
|  | [Service Mode] / [ADF] / [Original Tray Width] | 2 |
|  | [Service Mode] / [ADF] / [Mixed Original Size Adjustment] | 3 |

### 3.19 Replace Multi feed detection board (installed with double feed detection Kit UK-501)

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace Multi feed detection board | [Service Mode] / [ADF] / [Multi-Feed DetectionAdj.] | 1 |

### 3.20 Add key counter

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Add key counter | Re-entry of Enhanced Security settings | 1 |

### 3.21 Execute initialize

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Execute initialize | [Service Mode] / [System 2] / [HDD Installed] | 1 |

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
|  | Re-entry of Utility settings | 2 |
|  | [Service Mode] / [System 1] / [Serial Number] | 3 |
|  | [Service Mode] / [System 1/2] and re-entry of setting values | 4 |
|  | Re-entry of Enhanced Security settings | 5 |

### 3.22 Add an optional device

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Add an optional device | [Service Mode] / [Firmware Version] | 1 |

### 3.23 Execute F/W update

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Execute F/W update | [Service Mode] / [Firmware Version] | 1 |

### 3.24 Add fax board

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Add fax board | [Service Mode] / [System2] / [Option Board Status] | 1 |
|  | Installing the firmware | 2 |
|  | [Service Mode] / [System1] / [Marketing Area] / [Fax Target] | 3 |

### 3.25 Mount DF-629

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Mount DF-629 | ADF adjusting the height | 1 |
|  | Adjusting front side skew feed on ADF | 2 |
|  | [Service Mode] / [ADF] / [Read Pos Adj] | 3 |
|  | [Service Mode] / [ADF] / [FD-Mag. Adj.(F)] | 4 |

### 3.26 Mount DF-704

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :---: | :---: | :---: |
| Mount DF-704 | ADF adjusting the height | 1 |
|  | Adjusting front side skew feed on ADF | 2 |
|  | Adjusting back side skew feed on ADF | 3 |
|  | [Service Mode] / [ADF] / [Original Tray Width] | 4 |
|  | [Service Mode] / [ADF] / [Original Stop Position] | 5 |
|  | [Service Mode] / [ADF] / [FD-Mag. Adj. (F)] | 6 |
|  | [Service Mode] / [ADF] / [FD-Mag. ADJ. (B)] | 7 |
|  | [Service Mode] / [ADF] / [Main Scanning Direction Zoom] | 8 |
|  | [Service Mode] / [ADF] / [Read Pos Adj] | 9 |
|  | [Service Mode] / [System 2] / [CIS Image Adjustment] | 10 |

### 3.27 Replace CIS module (when DF-704 is mounted)

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :---: | :---: | :---: |
| Replace CIS module | Adjusting back side skew feed on ADF | 1 |
|  | [Service Mode] / [ADF] / [FD-Mag. Adj. (F)] | 2 |
|  | [Service Mode] / [ADF] / [FD-Mag. ADJ. (B)] | 3 |
|  | [Service Mode] / [ADF] / [Auto Stop Position Adjustment] | 4 |
|  | [Service Mode] / [ADF] / [Main Scanning Direction Zoom] | 5 |
|  | [Service Mode] / [ADF] / [Read Pos Adj] | 6 |
|  | [Service Mode] / [System 2] / [CIS Image Adjustment] | 7 |

### 3.28 Replace Dual scan document feeder

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :--- | :--- | :---: |
| Replace Dual scan document feeder | ADF adjusting the height | 1 |
|  | [Service Mode] / [ADF] / [ADF automatic Adjustment] / [Skew Measurement] | 2 |
|  | [Service Mode] / [ADF] / [ADF automatic Adjustment] / [Sub Scanning] | 3 |
| [Service Mode] / [ADF] / [ADF automatic Adjustment] / [Main Scanning] | 4 |  |
|  | [Service Mode] / [ADF] / [Read Pos Adj] | 5 |

| Replacement part/Service job | Adjustment/setting items | Procedure |
| :---: | :--- | :---: |
|  | [Service Mode] / [ADF] / [FD-Mag. Adj. (F)] | 6 |

## 4. LIST OF SERVICE MODE

### 4.1 List of service mode (outline)

## NOTE

- After exiting Service Mode, you must turn OFF the main power switch. Turning ON the main power switch again after waiting 10 seconds makes the changes to the Service Mode setting take effect.

| Service Mode | Search | Search |
| :---: | :---: | :---: |
|  | Machine | I.4.2.1 Machine |
|  | Firmware Version | I.5.5 Firmware Version |
|  | Imaging Process Adjustment | I.4.2.2 Imaging Process Adjustment |
|  | CS Remote Care | I.4.2.3 CS Remote Care |

*1: It will be displayed only when optional dual scan document feeder DF-704 is mounted. (C368/C308/C258)
*2: It is only displayed on bizhub C658/C558/C458.
*3: It is not used on bizhub C368/C308/C258.

### 4.2.6 Counter

## NOTE

- After exiting Service Mode, you must turn OFF the main power switch. Turning ON the main power switch again after waiting 10 seconds makes the changes to the Service Mode setting take effect.

| Counter | Ref. Page |
| :--- | :--- |
| Life | I.5.17.2 Life |
| Service Call | I.5.17.3 Service Call |
| Section Service Call | I.5.17.4 Section Service Call |
| Warning | I.5.17.5 Warning |
| Maintenance | I.5.17.6 Maintenance |
| Service Total | I.5.17.7 Service Total |
| Counter Of Each Mode | I.5.17.8 Counter of Each Mode |
| Service Call History (Data) | I.5.17.9 Service Call History (Data) |
| ADF Paper Pages | I.5.17.10 ADF Paper Pages |
| Paper Jam History | $I .5 .17 .11$ Paper Jam History |
| Fax Connection Error | $I .5 .17 .12$ Fax Connection Error |
| ADF Scan Glass Contamin. Counter | $I .5 .17 .13$ ADF Scan Glass Contamin. Counter |
| Parts Counter (Fixed) *1 | $I .5 .17 .14$ Parts Counter (Fixed) |
| Jam | $I .5 .17 .15$ Jam |
| Section JAM | $I .5 .17 .16$ Section JAM |
| Instantaneous Power Failure | $I .5 .17 .17$ Instantaneous Power Failure |
| Detail code history | $I .5 .17 .18$ Detail code history |
| Recoverable error counter | $I .5 .17 .19$ Recoverable error counter |
| Counter Reset |  |

*1: It will be displayed only when the optional finisher FS-533 or FS-534 is mounted.

### 4.2.7 List Output

## NOTE

- After exiting Service Mode, you must turn OFF the main power switch. Turning ON the main power switch again after waiting 10 seconds makes the changes to the Service Mode setting take effect.

| List Output | Ref. Page |
| :--- | :--- |
| Batch list CSV output | Batch list CSV output |
| Individual list print output |  |
| Machine Management List | I.5.18.2 Machine Management List |
| Adjustments List | I.5.18.3 Adjustments List |
| Parameter List | I.5.18.4 Parameter List |
| Service Parameter | Last |
| Protocol Trace | Error |
|  | I.5.18.5 Service Parameter |
| Fax Setting List | I.5.18.7 Fax Setting List |
| Fax Analysis List | I.5.18.8 Fax Analysis List Trace |

### 4.2.8 State Confirmation

NOTE

- After exiting Service Mode, you must turn OFF the main power switch. Turning ON the main power switch again after waiting 10 seconds makes the changes to the Service Mode setting take effect.

| State Confirmation |  | Ref. Page |
| :---: | :---: | :---: |
| Sensor Check |  | I.5.19.1 Sensor Check |
| Table Number |  | I.5.19.2 Table Number |

### 4.2.14 Machine Update Setting

NOTE

- After exiting Service Mode, you must turn OFF the main power switch. Turning ON the main power switch again after waiting 10 seconds makes the changes to the Service Mode setting take effect.

| Machine Update Setting |  |  | Ref. Page |
| :---: | :---: | :---: | :---: |

*1: To be displayed only when the following setting is set to "ON". [Machine Update Setting] -> [Internet ISW] -> [Internet ISW set] -> [Function Setting]

## 5. SERVICE MODE

### 5.1 Starting/Setting/Exiting

### 5.1.1 Starting procedure

## NOTE

- Ensure appropriate security for Service Mode function setting procedures. They should NEVER be shown to any unauthorized person not involved with service jobs.

## (1) Procedure

1. Touch Menu.
2. Touch [Counter].
3. Touch [Display Keypad].
4. Press the following keys in this order.

- Stop -> 0 -> 0 -> Stop -> 0 -> 1

5. Enter the CE password and touch [END]. (The CE password is initially set to " 9272927292729272. .) NOTE

- When [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to "ON", CE password authentication is necessary.
- If a wrong CE password is entered, re-enter the right password.

The machine will not enter Service Mode unless the CE password is entered correctly. To return to the basic screen, turn OFF the main power switch and turn it ON again.

- When [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Prohibited Functions When Authentication Error] is set to "Mode 2", operation will be prohibited since it indicates authentication failure by failing to enter the correct CE password within the specified number of times.
If the access lock is activated, the lock release timer starts to operate by input the Stop -> 0 -> 9 -> 3 -> 1 -> 7 in Menu -> [Counter] -> [Print List] -> [Display Keypad] after the main power switch is turned OFF and On. When the timer reaches the time specified in this setting, the access lock is released.
- The service code entered is displayed as "*"

6. The Service Mode menu will appear.

NOTE

- Be sure to change the CE password from its default value.
- For the procedure to change the CE password, see the [Enhanced Security] -> [CE Password].
- NEVER forget the CE password.

### 5.1.2 Setting procedure

1. Press the key corresponding to the function you would like to change the setting for. Keys or setting screens will appear for each function. Ex.: System 1

2. Press the key for the item that you would like to change the setting for. Setting screens will appear for each item. Ex.: Install Date

3. Press the key for the setting you would like to change. You can also input the numerical value using the 10-key pad. (the $[+] /[-]$ keys can also be used for settings. Follow the directions on the screen to input numerical values.)
NOTE

- For more details, see the description pages for each setting item.

4. Touch [END]. This closes the setting screen and returns to the Service Mode screen. (If deep within the hierarchy of the setting screen, it may be necessary to touch [END] several times)
5. Touch [Exit]. This will close the Service Mode screen and exit the Service Mode.
6. Turn OFF the main power switch. After waiting 10 seconds, turn ON the main power switch again. Turning the main power switch OFF and then ON again makes the changes to the Service Mode setting take effect.
NOTE

- Simply exiting the Service Mode will not make the changed settings take effect. You must turn the main power switch OFF and then ON again.

### 5.1.3 Exiting procedure

1. Touch [Exit] on the Service Mode screen.
2. Turn OFF the main power switch. Wait 10 seconds, then turn ON the main power switch again.

### 5.2 Time Zone/Date \& Time Input mode

### 5.2.1 Use

- This mode is used to set time-of-day and date.
- The set time zone/date \& time are automatically reflected in the date and time setting of Administrator Settings.

| Time Zone Setting | Set the time zone applicable to the area. |
| :--- | :--- |
|  | After the setting, touch [Entry] and then [Apply] to validate the time. |
|  | The following lists settings of time zones of different areas. |
|  | $-08: 00:$ U.S.: Pacific Standard Time |
|  | $-06: 00:$ U.S.: Central Standard Time |
|  | $-05: 00:$ U.S.: Eastern Standard Time |

|  | -00:00: England: Greenwich mean time <br> +01:00: Western European countries <br> +08:00: China, Taiwan, western part of Australia <br> +09:00: Japan, Korea, |
| :--- | :--- |
| Date \& Time Setting | Enter the time from the 10-key pad to set the time-of-day. <br> Before making any entry, first press Clear. <br> After the time has been set, touch [Entry] and then [Apply]. |

### 5.2.2 Procedure

1. Call the Service Mode to the screen.
2. Press the following keys in this order.

- Stop -> 1 -> 1 -> 4 -> 4 -> Clear

3. Enter time zone year, month, day, hour, and minute, in that order, from 10-key pad.

NOTE

- Before entering date and time, touch Clear to delete the present time from the place where data and time is entered.
" When setting the month, day, hour, or minute, enter "0" first if the data one digit.

4. Make sure that the correct value has been entered, then touch [Entry] and then [Apply].
5. After the confirmation screen appears, touch [OK].

### 5.3 Search

### 5.3.1 Use

- Searches parameters that include the entered keyword.
- You can display the function screen from the search results.

### 5.3.2 Procedure

1. Touch [Search] at the top of the service mode screen.
2. Enter the desired search keyword.
3. Touch [END].
4. Select the desired function from the displayed search results and touch [Start].
5. The screen for the selected function displays.

### 5.4 Machine

### 5.4.1 Trail Edge Color Alignment Adj (bizhub C658/C558/C458)

(1) Use

- To adjust color shift if color shift is found at the trailing edge of either plain paper or thick paper by the comparison of originals and their output.
- Uses this function when color shift occurs at the trailing edge of images.
- Able to make a setting on a process speed basis independently for each paper type of Normal/Thin Paper, Thick 1/1+ and Thick 2/3/4. NOTE
- It is not used on bizhub C558/C458.
(2) Default setting
- 0
(3) Setting range
- 5 to 5 (Step: 1)

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch these keys in this order: [Machine] -> [Trail Edge Color Alignment Adj].
3. Load manual bypass tray with $\mathrm{A} 3 / 11 \times 17$ or $\mathrm{A} 4 / 81 / 2 \times 11$ plain paper.
4. Select the paper type to be adjusted.
5. Press the Start key.
6. Using the printed test pattern, check color shift in the sub scan direction on both leading and trailing edge areas. If color shift is found only around the trailing edge, perform the following adjustment. (If color shift is found on both areas, perform [Color Registration Adjustment].)
7. Using the [+] / [-] key, change the setting value as necessary.

- If the cross deviates in the direction of $A$, increase the setting. (Decrease paper transport speed.)
- If the cross deviates in the direction of B, decrease the setting. (Increase paper transport speed.)

8. Produce another test pattern and make sure that there is no deviation.

Check Procedure

If the cross deviates in the direction of $A$, decrease the setting.
If the cross deviates in the direction of $B$ increase the setting.

Direction of $A$

Direction of $B$

### 5.4.2 Fusing Temperature

(1) Use

- To adjust individually the temperature of the heating roller for each type of paper, thereby coping with varying fusing performance under changing environmental conditions.
- When fusing performance is poor, or wax streak or offset occurs when the type of paper is changed or environmental conditions change.
- Use when the curling of the paper due to the paper type or environmental change occurred, or when the paper jam, as well as stapling or folding position error occurred due to the curling of the paper.
- By setting the temperature higher (+), gloss of print can be improved.
- By setting the temperature lower (-), exit roller mark can be reduced.
(2) Default setting
- 0
(3) Adjustment range
- bizhub C368/C308/C258

| Paper type | Setting range | Step |
| :---: | :---: | :---: |
| Plain Paper |  | $5{ }^{\circ} \mathrm{C}$ |
| Thin Paper |  |  |
| OHP Film |  |  |
| Thick 1 |  |  |
| Thick 1+ |  |  |
| Thick 2 |  |  |
| Thick 3 |  |  |
| Thick 4 |  |  |
| Post. |  |  |
| Enve. |  |  |
| Recycled |  |  |

- bizhub C658/C558/C458 (600dpi/1200dpi)

| Paper type | Setting range | Step |
| :---: | :---: | :---: |
| Plain Paper |  | $5{ }^{\circ} \mathrm{C}$ |
| Thin Paper |  |  |
| OHP Film |  |  |
| Thick 1 |  |  |
| Thick 1+ $+10^{\circ} \mathrm{C}$ |  |  |
| Thick 2 |  |  |
| Thick 3 |  |  |
| Thick 4 |  |  |
| Post. |  |  |
| Enve. |  |  |

| Paper type | Setting range | Step |
| :---: | :---: | :---: |
| Recycled |  |  |

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch these keys in this order: [Machine] -> [Fusing Temperature]
3. Select [600dpi] or [1200dpi].

NOTE

- Only for bizhub C658/C558/C458

4. Select the paper type.
5. Enter the new setting from the [+] / [-] key.

- If fusing performance is poor, increase the setting.
- If wax streaks occur, decrease the setting.
- If offset is poor, decrease the setting.
- If curling of the paper occurs, decrease the setting

6. Touch [END].
7. Return to the basic screen.
8. Output two or three test patterns and check to see whether the image has any problem
9. Make the adjustment for each type of paper.

### 5.4.3 Fusing Transport Speed

(1) Use

- To adjust the speed of the fusing motor so as to match the fusing speed with transport speed.
- Brush effect or blurred image is evident as a result of changes in environmental conditions or degraded durability.
(2) Default setting
- 0
(3) Adjustment range
- bizhub C368/C308/C258

| Paper type | Setting range | Step |
| :--- | :---: | :---: |
| Normal/Thin Paper | -20 to +20 | 1 |
| Thick 1-4 |  |  |

- bizhub C458

| Paper type | Setting range | Step |
| :--- | :---: | :---: |
| Normal/Thin Paper | -20 to +20 | 1 |
| Thick $1 / 1+$ |  |  |
| Thick $2 / 3 / 4$ |  |  |

- bizhub C658/C558

| Paper type |  | Setting range | Step |
| :--- | :--- | :---: | :---: |
| 600dpi | Normal/Thin Paper | -20 to +20 | 1 |
|  | Thick Paper |  | 1 |
| 1200dpi | -20 to +20 | 1 |  |

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch these keys in this order: [Machine] -> [Fusing Transport Speed].
3. Select a processing speed for the mode where a brush effect or a blurred image occurred.
4. Enter the new setting from the 10-key pad

- If brush effect is evident, vary the setting value and check for image.
- If a blurred image occurs, decrease the setting

5. Touch [END].
6. Return to the basic screen.
7. Check the print image for any image problem.

### 5.4.4 Heater Control Level (bizhub C458/C368/C308/C258)

(1) Use

- The fluorescent lamp connected to the same power source as the MFP may flicker due to the fusing heater lamp switching On/Off.
- The MFP DC power supply may generate noise due to the fusing heater lamp switching On/Off.
- Control the flicker and noise generation by changing the level of the fusing unit phase control.

## NOTE

- Reducing the control level can cause the DC power supply to generate noise, and increasing the level can cause the fluorescent lamp to flicker.
- Whenever changing the control level, specify a level that will reduce the fluorescent lamp flickering and DC power source noise.

## (2) Default setting

- Level 2
- Level 3 (only for EU)

## (3) Setting range

- Level 1 to Level 4 (Step: 1)

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Heater Control Level].
3. Enter the new setting from the [+] / [-] key.

- When the fluorescent light flickers: Turn down the level. (Example: Level 2 -> Level 1)
- When there is a noise at power source system such as DC power supply: Turn up the level. (Example: Level 2 -> Level 3 -> Level 4)

### 5.4.5 Printer Area

## (1) Leading Edge Adjustment

(a) Use

- To vary the print start position in the sub scan direction for each of different paper types. (to adjust the timing where paper is sent out from the registration roller)
- Although the adjustment is made on the manual bypass tray, the adjusted values are reflected to each paper tray.
- The PH unit has been replaced.
- The paper type has been changed.
- The print image deviates in the sub scan direction.
- A faint image occurs on the leading edge of the image.
- This setting can be made independently for plain paper, thin paper, thick $1 / 1+$, thick 2, thick 3 , thick 4 , OHP film, and envelopes.
(b) Default setting
- 0.0
(c) Setting range

- Width A on the test pattern produced should fall within the following target.

| Target | $4.2 \pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -3.0 mm to +3.0 mm (in 0.2 mm increments) |

## (d) Procedure

1. Load manual bypass tray with A 3 or $11 \times 17$ plain paper.

NOTE

- Load tray 1 with thin paper when [Thin Paper] is selected.

2. Call the Service Mode to the screen.
3. Touch [Machine] -> [Printer Area] -> [Leading Edge Adjustment].
4. Select [Leading Edge Adjustment] or [Halftone pattern].
5. Select the [Plain Paper].
6. Press the Start key to let the machine produce a test pattern.
7. Check the dimension of width $A$ on the test pattern.
8. If width $A$ falls outside the target, change the setting using the [+] / [-] key.

- If width $A$ is longer than the target, make the setting value smaller than the current one.
- If width A is shorter than the target, make the setting value greater than the current one.

9. Press the Start key to let the machine produce a test pattern.
10. Check the dimension of width $A$ on the test pattern.
11. If width $A$ is outside the target, change the setting again and make a check again.
12. If width $A$ falls within the target, touch [END].
13. Following the same procedure, adjust for thin paper, thick 1 to 3 , OHP film, and envelope.

## (2) Printer Image Centering Side 1

(a) Use

- To vary the print start position in the main scan direction for each paper source.
- The PH unit has been replaced.
- A paper feed unit has been added.
- The print image deviates in the main scan direction.
(b) Default setting
- 0.0
(c) Setting range

- Width A on the test pattern produced should fall within the following target.

| Target | $3.0 \pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -3.0 mm to +3.0 mm (in 0.2 mm increments) |

## (d) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Printer Area] -> [Printer Image Centering Side 1].
3. Select [Leading Edge Adjustment] or [Halftone pattern].
4. Select the paper source to be adjusted.
5. Press the Start key to let the machine produce a test pattern.
6. Check the dimension of width $A$ on the test pattern.
7. If width A falls outside the target, change the setting using the $[+] /[-]$ key.

- If width $A$ is longer than the target, make the setting value smaller than the current one.
- If width $A$ is shorter than the target, make the setting value greater than the current one.

8. Press the Start key to let the machine produce a test pattern.
9. Check the dimension of width $A$ on the test pattern.
10. If width $A$ is outside the target, change the setting again and make a check again.
11. If width $A$ falls within the target, touch [END].
12. Following the same procedure, adjust for all other paper sources. (Use A4 or $81 / 2 \times 11$ plain paper for the bypass.)

## (3) Leading Edge Adj. Side 2 (Duplex)

(a) Use

- For individual types of paper, this function allows the adjustment of the image write start position in the sub scan direction on the 2nd side of duplex printing. (to adjust the timing where paper is sent out from the registration roller)
- Although the adjustment is made on the manual bypass tray, the adjusted values are reflected to each paper tray.
- This adjustment is made when the image on the 2nd side of paper deviates from the original position in the sub scan direction.
- This adjustment can be made independently for each of plain paper, thin paper, thick paper $1 / 1+$, thick paper 2 , and thick paper 3 .
(b) Default setting
- 0.0
(c) Setting range

- Width A on the test pattern produced should fall within the following target.
- For measurement, use the image produced on the backside of the test pattern.

| Target | $4.2 \pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -3.0 mm to +3.0 mm (in 0.2 mm increments) |

## (d) Procedure

1. Load manual bypass tray with A 3 or $11 \times 17$ plain paper.

NOTE

- Load tray 1 with thin paper only when [Thin Paper] is selected.

2. Call the Service Mode to the screen.
3. Touch [Machine] -> [Printer Area] -> [Leading Edge Adj. Side 2 (Duplex)].
4. Select [Leading Edge Adjustment] or [Halftone pattern].
5. Select the [Plain Paper].
6. Press the Start key to let the machine produce a test pattern.
7. Check the dimension of width $A$ on the test pattern.
8. If width A falls outside the target, change the setting using the [+] / [-] key.

- If width $A$ is longer than the target, make the setting value smaller than the current one.
- If width $A$ is shorter than the target, make the setting value greater than the current one.

9. Press the Start key to let the machine produce a test pattern.
10. Check the dimension of width $A$ on the test pattern.
11. If width $A$ is outside the target, change the setting again and make a check again.
12. If width $A$ falls within the target, touch [END].
13. Following the same procedure, adjust for thin paper and thick paper.
(4) Prt. Image Center. Side 2 (Dup)
(a) Use

- To vary the print start position in the main scan direction for each paper source in the 2-Sided mode.
- The image on the backside of the 2-sided copy deviates in the main scan direction.
(b) Default setting
- 0.0
(c) Setting range

- Width A on the test pattern produced should fall within the following target.
- For measurement, use the image produced on the backside of the test pattern.

| Target | $3.0 \pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -3.0 mm to +3.0 mm (in 0.2 mm increments) |

## (d) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Printer Area] -> [Prt. Image Center. Side 2 (Dup)].
3. Select [Leading Edge Adjustment] or [Halftone pattern].
4. Select the paper source to be adjusted.
5. Press the Start key to let the machine produce a test pattern.
6. Check the dimension of width $A$ on the test pattern.
7. If width A falls outside the target, change the setting using the $[+] /[-]$ key.

- If width $A$ is longer than the target, make the setting value smaller than the current one.
- If width $A$ is shorter than the target, make the setting value greater than the current one.

8. Press the Start key to let the machine produce a test pattern.
9. Check the dimension of width $A$ on the test pattern.
10. If width $A$ is outside the target, change the setting again and make a check again.
11. If width A falls within the target, touch [END].
12. Following the same procedure, adjust for all other paper sources. (Use A4 or $81 / 2 \times 11$ plain paper for the manual bypass tray.)

## (5) Paper Feed Direction Adj.

(a) Use

- To synchronize the paper transport speed with the image writing speed.
- [Sub Scan Zoom Adj.] becomes necessary.
- The print image on the copy distorts (stretched, shrunk).
- When the print image on the copy is stretched in the sub scan direction.
- This setting can be made independently for normal/thin paper, thick $1 / 1+$, thick 2 , thick 3 , and thick 4 .
(b) Default setting
- 0
(c) Setting range

- Width $A$ and width $B$ on the test pattern produced should fall within the following target. NOTE
- Width A: equivalent to one grid
- Width B: equivalent to 48 grids

| Target | A: $8.13 \pm 0.2 \mathrm{~mm}$ |
| :--- | :--- |
|  | B: $390.14 \mathrm{~mm} \pm 2.0 \mathrm{~mm}$ |
| Setting range | A: -7 to +7 |
|  | B: -7 to +7 |

- Make adjustment in the same way after changing the paper to thick paper.

## (d) Procedure

1. Load manual bypass tray with A 3 or $11 \times 17$ plain paper.
2. Call the Service Mode to the screen.
3. Touch [Machine] -> [Printer Area] -> [Paper Feed Direction Adj].
4. Select [Lattice pattern] or [Halftone pattern].
5. Select [Normal/Thin Paper].
6. Press the Start key to let the machine produce a test pattern.
7. Check width $A$ (equivalent to one grid) and width $B$ (equivalent to 48 grids) on the test pattern.
8. Touch [Machine] -> [Printer Area] -> [Paper Feed Direction Adj].].
9. If width of $A$ or $B$ falls outside the target, change the setting using the $[+] /[-]$ keys.

- If width $A$ or $B$ is longer than the target, make the setting value smaller than the current one.
- If width $A$ or $B$ is shorter than the target, make the setting value greater than the current one.

10. Press the Start key to let the machine produce a test pattern again.
11. Check width $A$ and width $B$ on the test pattern.
12. If width $A$ or $B$ falls outside the target, change the setting value and make a check again.
13. If width $A$ falls within the target, touch [END].
14. Following the same procedure, adjust for thick paper.

## (6) Tray Printing Position: Tip

(a) Use

- To change and adjust image printing position at vertical scanning direction by each feed. (to adjust the timing starting from the roller connection up to start of transfer output). It is not applicable in case the job is fed at re-feed.
- To be used when [Printer Area-Leading Edge Adjustment] is not enough for full adjustment (as such case that image printing position gets deviated due to pattern of each feed.)
- Setting is available according to feed of 1st. Short (the length of paper at vertical scanning direction is under 276.4 mm ), 1 st . Long (the length of paper at vertical scanning direction is over 276.4 mm ), 2nd, 3rd, 4th and Manual.
- Adjustment is made for plain paper.
(b) Default setting
- 0.0

## (c) Setting range

## NOTE

- [Printer Area-Leading Edge Adjustment] should be made within target.
- Image printing position at vertical scanning direction is adjusted based on the combination value of this setting figure and
 be rounded to 3.0 mm or -3.0 mm .

- Width A on the test pattern produced should fall within the following target.

| Target | $4.2 \pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -3.0 mm to +3.0 mm (in 0.2 mm increments) |

## (d) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Printer Area] -> [Tray Printing Position: Tip].
3. Set plain paper to the targeted tray, and select the feed tray.
4. Press the Start key to let the machine produce a test pattern.
5. Check the dimension of width $A$ on the test pattern.
6. If width $A$ falls outside the target, change the setting using the [+] / [-] key.

- If width $A$ is longer than the target, make the setting value smaller than the current one.
- If width $A$ is shorter than the target, make the setting value greater than the current one.

7. Press the Start key to let the machine produce a test pattern.
8. Check the dimension of width $A$ on the test pattern.
9. If width $A$ is outside the target, change the setting again and make a check again.
10. If width A falls within the target, touch [END].

### 5.4.6 Scan Area

- Use the following color chart for the adjustment of the scanner section.
- If the color chart is not available, a scale may be used instead.

| Adjustment item |  |
| :--- | :--- |
| A: Image Position: Leading Edge | I.5.4.6 (1) Image Position: Leading Edge |
| B: Scanner Image Side Edge | I.5.4.6 (2) Scanner Image Side Edge |
| C: Main Scan Zoom Adj. | I.5.4.6 (3) Main Scan Zoom Adj. |
| D: Sub Scan Zoom Adj. | I.5.4.6 (4) Sub Scan Zoom Adj. |

## (1) Image Position: Leading Edge

(a) Use

- To adjust variations in mounting accuracy and sensitivity of the scanner home sensor and in mounting accuracy of the original width scale by varying the scan start position in the sub scan direction.
- When the original glass is replaced.
- The CCD board has been replaced.
- The scanner home sensor has been replaced.
(b) Default setting
- 0.0
(c) Setting range

Enlarged view of the color chart

- A width on the color chart and one on the test pattern are measured and adjusted so that the difference of A width satisfies the target shown below.
- An adjustment must have been completed correctly of [Leading Edge Adjustment] of the [Printer Area].

| Target | $\mathrm{A}: \pm 1.5 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -3.0 mm to +3.0 mm (in 0.1 mm increments) |

## (d) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Scan Area] -> [Image Position: Leading Edge].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a copy.
5. Check point $A$ on the test pattern.
6. If width $A$ on the test pattern falls outside the target, change the setting using the [+] / [-] key.

- If the copy image is less than the target, increase the setting value.
- If the copy image exceeds the target, decrease the setting value.

7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the targets are met.

## (2) Scanner Image Side Edge

(a) Use

- To adjust part-to-part variations in accuracy of scanner parts and their mounting accuracy by varying the scan start position in the main scan direction.
- The eMMC board has been replaced.
- When the original glass is replaced.
- The CCD board has been replaced.
(b) Default setting
- 0.0
(c) Setting range

Enlarged view of the color chart

- B width on the color chart and one on the test pattern are measured and adjusted so that the difference of B width satisfies the target shown below.
- An adjustment must have been completed correctly of [Printer Image Centering Side 1] of [Printer Area].

| Target | Width B: $\pm 1.5 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -5.7 mm to +5.7 mm (in 0.1 mm increments) |

## (d) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Scan Area] -> [Scanner Image Side Edge].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a copy.
5. Check point $B$ on the image of the test pattern.
6. If the test pattern falls outside the target, change the setting using the [+] / [-] key.

- If the copy image is less than the target, increase the setting value.
- If the copy image exceeds the target, decrease the setting value.

7. Press the Start key to make a test pattern.
8. Check point B of the image on the test pattern to see if the specifications are met.
9. Make adjustments until the targets are met.

## (3) Main Scan Zoom Adj.

(a) Use

- To adjust the zoom ratio in the main scan direction for the scanner section.
- The eMMC board has been replaced.
- The CCD board has been replaced.
(b) Default setting
- 1.000
(c) Setting range

Enlarged view of the color chart

- Measure C width on the color chart and on the test pattern, and adjust the gap to be within the following target.
- An adjustment must have been completed correctly of [Paper Feed Direction Adj.] of [Printer Area].

| Target | Width C: $\pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | 0.990 to 1.010 (steps: 0.001 ) |

* Standard size when using a scale: 200.0 mm

## (d) Procedure

. Call the Service Mode to the screen.
. Touch [Machine] -> [Scan Area] -> [Main Scan Zoom Adj.].
. Position the color chart correctly so that the original reference point is aligned with the scale.
. Press the Start key to make a test pattern.
. Check the C width on the image of the copy.
6. If the test pattern falls outside the target, change the setting using the [+] / [-] key.

- If the C width on the copy sample is less than one on color chart, increase the setting.
- If the $C$ width on the copy sample exceeds one on color chart, decrease the setting.

7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the targets are met.
(4) Sub Scan Zoom Adj.
(a) Use

- To adjust the zoom ratio in the sub scan direction for the scanner section.
- The LED exposure unit or the scanner motor has been replaced.
(b) Default setting
- 1.000
(c) Setting range

Enlarged view of the color chart

- Measure D width on the color chart and on the test pattern, and adjust the gap to be within the following target.
- An adjustment must have been completed correctly of [Paper Feed Direction Adj.] of [Printer Area].

| Target | Width D: $\pm 1.5 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | 0.990 to 1.010 (steps: 0.001 ) |

* Standard size when using a scale: 300.0 mm

## (d) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Scan Area] -> [Sub Scan Zoom Adj.].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a test pattern.
5. Check the D width on the image of the test pattern.
6. If the test pattern falls outside the target, change the setting using the $[+]$ / [-] key.

- If the D width on the copy sample is less than one on color chart, increase the setting.
- If the D width on the copy sample exceeds one on color chart, decrease the setting.

7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the targets are met.

### 5.4.7 Printer Reg. Loop Adj.

(1) Use

- To set the correction value of the paper loop length for each process speed of tray 1, tray 2-4 and LCT, manual or Duplex.
- To adjust the length of the loop formed in paper before the registration rollers.
- Use "Paper Passage" for paper passage check.
- When a paper skew occurs or paper misfeed occurs.

## (2) Setting range

- The adjustable range is different depending on paper source and paper type.

## bizhub C658

| 600dpi |  | Tray 1 | 2-4th Step/LCT | manual | Duplex |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Normal/ Thin Paper | -11 to +7 | -11 to +7 | -10 to +8 | -9 to +10 |
|  | Thick $1 / 1+$ | -11 to +7 | -11 to +7 | -10 to +8 | -9 to +10 |
|  | Thick $2 / 3 / 4$ | -11 to +7 | -11 to +7 | -10 to +8 | -9 to +10 |
| 1200dpi | -11 to +7 | -11 to +7 | -10 to +8 | -9 to +10 |  |

bizhub C558

| 600dpi |  | Tray 1 | $2-4$ th Step/LCT | manual | Duplex |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Normal/ Thin Paper | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |
|  | Thick $1 / 1+$ | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |
|  | Thick $2 / 3 / 4 *$ | Not used | Not used | Not used | Not used |
|  | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |  |

- *: The settings made at [Thick $1 / 1+$ ] are available to adjustment at [Thick 2/3/4].
bizhub C458

| 600dpi |  | Tray 1 | 2-4th Step/LCT | manual | Duplex |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Normal/ Thin Paper | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |
|  | Thick $1 / 1+$ | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |
|  | Thick $2 / 3 / 4$ | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |
|  | Not used | Not used | Not used | Not used |  |

[^35]
## bizhub C368/C308/C258

|  | Tray 1 | $2-4$ th Step/LCT | manual | Duplex |
| :---: | :---: | :---: | :---: | :---: |
| Normal/Thin Paper | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |
| Thick $1 / 1+$ | -11 to +7 | -11 to +7 | -11 to +7 | -12 to +8 |
| Thick $2 / 3 / 4 *$ | Not used | Not used | Not used |  |

- *: The settings made at [Thick $1 / 1+$ ] are available to adjustment at [Thick $2 / 3 / 4$ ].

## (3) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Printer Reg. Loop Adj.].
3. Select a paper source and a processing speed where the settings are made by touching the corresponding keys.
4. Using the $[+]$ / [-] keys, vary the setting value.

- To decrease the loop amount: Decrease the setting value.
- To increase the loop amount: Increase the setting value.

### 5.4.8 Color Registration Adjustment

## (1) Cyan, Magenta, Yellow

(a) Use

- To adjust color shift if there is any when comparing the original with copy of the plain or thick paper.
- To correct any color shift.
- This setting can be made independently for plain paper, thick $1 / 1+$, thick 2 , thick 3 , and thick 4.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Color Registration Adjustment].
3. Load manual bypass tray with $\mathrm{A} 3 / 11 \times 17$ or $\mathrm{A} 4 / 81 / 2 \times 11$ plain paper.
4. Press the Start key.
5. On the test pattern produced, check for deviation between the black line and the line of each color at positions X and Y .
6. Select the color to be adjusted.
7. Using the [+]/ [-] key, change the setting value as necessary. (At this time, only the line of the selected color moves.)

- If the cross deviates in the direction of $A$, increase the setting.
- If the cross deviates in the direction of $B$, decrease the setting.

8. Produce another test pattern and make sure that there is no deviation.
<Check Procedure>
Check point $\mathrm{X}, \mathrm{Y}$

If the cross deviates in the direction of $A$, increase the setting.
If the cross deviates in the direction of $B$, decrease the setting.

Adjustment for X direction: Check point X

Direction of A
Direction of $B$

Adjustment for $Y$ direction: Check point $Y$

If the cross deviates in the direction of $A$, increase the setting.
If the cross deviates in the direction of $B$, decrease the setting.

Direction of $A$

Direction of $B$

### 5.4.9 Print Head Skew Adj.

## (1) Print Head Skew Adj.

(a) Use

- To display the default position of the skew correction motor.
- In this machine, it is not unable to enter the adjusting value.

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Print Head Skew Adj.] -> [Print Head Skew Adj].
3. Check the skew adjustment value for each color.
4. Touch [END].

## (2) Print Head Skew Reset

(a) Use

- Returns the skew correction motor to the default position and clear the backup copies of the cumulative skew amount.
- To be used when the backup position information of settings in the machine is lost due to operations such as replacement of the EEPROM.
- After addressing the malfunction code $\mathrm{P}-14$ and completing an action to the problem, perform this function.
- Use this function when the current skew correction motor's position becomes unavailable due to the skew adjustment interrupted by the door being opened or the main power switch being turned OFF.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Print Head Skew Adj.] -> [Print Head Skew Reset].
3. Touch the start key and execute the print head skew reset.

NOTE

- After the print head skew reset is complete, be sure to perform [Initialize + Image Stabilization].
(3) Skew adjustment result on the panel
- Skew adjustment result is provided in [Skew Adjust Value], which is selected as follows: [Service Mode] -> [State Confirmation] -> [Color Regist].

## Color Regist

| Skew Adjust Value | Contents |
| :---: | :--- |
| Default | Displays the initial position of the skew correction. |
| adjust value | Displays the final skew correction position that was obtained after finishing the image stabilization control. |
| Move | Displays how much skew adjust value changed in the previous image stabilization control. |

### 5.4.10 LD adjustment

(1) LD Timing Adj.

NOTE

- It is not used on bizhub C458/C368/C308/C258.
(a) Use
- It displays the emission delay value between two laser diode.
- This setting is made after the PH unit is replaced.
- This adjustment is made when the backup of information on position settings is lost.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [LD adjustment] -> [LD Timing Adj.].
3. Check the LD emission delay value for each color.
4. Touch [OK].

## (2) LD 1/2 Balance Adj.

NOTE

- It is not used on bizhub C458/C368/C308/C258.
(a) Use
- This function adjusts the LD lightness balance between the two LDs to correct the difference of LD lightness between the LDs.
- This setting is made after the PH unit or eMMC board is replaced.
- This adjustment is made to prevent uneven density in highlighted halftone area processed with error diffusion being caused by inappropriate laser intensity.
- To eliminate the differences in light intensity between LD1 and LD2, adjust the light intensity of LD2 to that of LD1 (the light intensity of LD1 is fixed).
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [LD adjustment] -> [LD 1/2 Balance Adj].].
3. Select [For adjustment] and press Start key.
4. Patterns are output with LD2 light intensity changed on the basis of LD1.

5. Each pattern has four squares. The two small squares diagonal to each other are printed with the same LD. (The pair of small squares where image density change corresponds to LD2.)
6. From the test pattern, select the pattern where the least density difference appears between LD1 and LD2 for each color.
7. Enter the adjustment value corresponding to the pattern you selected (see the above illustration) or a value close to the adjustment value using the 10-key pad on the panel.
8. Select [For effect confirmat.] and press Start key.
9. Confirm with the test pattern that is output for confirmation.
10. Touch [OK].

## (3) LD Light Width Adjustment

(a) Use

- To fine-adjust the light-emitting time of the laser that is scanned by the polygon motor.
- Use when the reproducibility of thin line is reduced.

NOTE

- Adjustment value of this setting will be reflected by the image stabilization control.
(b) Default setting
- +3
(c) Setting range
- 0 to +6 (Step: 1)

## (d) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [LD adjustment] -> [LD Light Width Adjustment].
3. Enter the new setting from the $[+]$ / $[-]$ key.

- Increase the value: Light-emitting time will be lengthened.
- Decrease the value: Light-emitting time will be shortened.

### 5.4.11 Manual Bypass Tray Width Adj

(1) Use

- To set the maximum width and the minimum width for the bypass paper width detection resistor of the manual bypass guide.
- Use when the bypass paper width detection resistor of the manual bypass guide has been changed.
- Use when a false paper size is displayed when the manual bypass is used.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Manual Bypass Tray Width Adj].
3. Touch [Max. Width].
4. Load the bypass tray with paper having a width of 297 mm .
5. Press the Start key and check that the results are [OK].
6. Touch [Min. Width.].
7. Load the bypass tray with paper having a width of 110 mm .
8. Press the Start key and check that the results are [OK].

* Make the adjustment again if the results are [NG].

### 5.4.12 Lead Edge Erase Adjustment

(1) Use

- To set the leading edge erase amount of the paper.
- Upon user requests, it is possible to specify the void area where image is not printed along the leading edge.
- This adjustment can be made individually for First Side, Second Side, Thin Paper Front, and Thin Paper Back.

## (2) Default setting

(a) First Side/Second Side

- 4 mm
(b) Thin Paper Front/Thin Paper Back
- 5 mm
(3) Setting item
(a) First Side/Second Side
- 4 mm
- 5 mm
- 7 mm

NOTE

- When " 4 mm " is selected, 4.2 mm is the actual amount to be erased in print based on the control system of the machine.
(b) Thin Paper Front/Thin Paper Back
- 4.0 mm to 10.0 mm (Step: 1.0 mm )

### 5.4.13 Non-Image Area Erase Check

(1) Use

- The non-image area erase function may not work properly under bright light source. Incoming light quantity is checked to verify that the non-image area erase function can work properly under the environment.
- Verification results are shown as follows:

| OK | Works properly. |
| :--- | :--- |
| NG1 | Works properly. However, data that may interfere with the non-image area erase function was <br> found. This function may not work well with dark original. |
| NG2 | Data that may interfere with the non-image area erase function was found. |

- Use this feature when installing a new machine or reinstalling a machine in a new place.
- Use this feature when the non-image area erase function fails to work properly due to the changes of the surrounding environment at the installation site.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Non-Image Area Erase Check].
3. Press the Start key to start a check.

NOTE

- Before the check, make sure that the DF or original cover is completely opened. In addition, make sure that no scratch or stain exists on the original glass.

4. Check the result is "OK."

* If the check result is "NG1" or "NG2," reinstall the machine in another place or adjust the orientation of the machine to reduce light incidence on the machine. Then, perform the check again.

### 5.4.14 ADF Scan Glass Contamination

(1) Use

- To check the stain on the ADF scan glass and display the result.

NOTE
" If the result is NG, "NG1" or "NG2" is displayed. NG1 corresponds to the detection of stain on the front side and NG2 corresponds to that on the back side.

- To manually perform the pre-detection of the stain which is normally conducted when the main power switch is turned ON, recovering from the sleep/low power mode, etc.
- [ADF Scan Glass Contamination] will be conducted with the detection level set by [Service Mode] -> [System 2] -> [ADF Scan Glass Contamin. Set.] -> [ADF Scan Glass Contamin. Sensitivity]. When the above setting is set to "Not Set", "NG1" or "NG2" will be displayed even though the pre-detection is conducted.
(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [ADF Scan Glass Contamination]
3. Press the start key to start the pre-detection.
4. Check to make sure that "OK" is displayed for the result.

- *When the result says "NG1" or "NG2", clean the glass and check again.

### 5.4.15 PPM Control Choice

(1) Use

- To improve productivity when printing on thin paper.
- To give a higher priority to productivity than to fusing performance, change the setting to " $100 \%$."
(2) Default setting
- 70 \%
(3) Functions
- 100\%
- 70\%

### 5.4.16 High Humidity PPM Adjustment

(1) Use

- If a paper curl occurs in a high humidity environment, suppress the curl by making paper passing intervals wider.
(2) Default setting
- 0
(3) Setting range

| Paper Type | Setting range | Step |
| :--- | :---: | :---: |
| Thin Paper | 0 to +2 | 1 |
| Normal |  |  |
| Recycled Paper |  |  |

## (4) Procedure

1. Touch these keys in this order: [Machine] -> [High Humidity PPM Adjustment].
2. Enter the new setting from $[+] /[-]$.

- 0: Productivity 100\% - No change in PPM (equivalent to the standard speed/product speed)
- 1: Productivity $70 \%$ - The paper feeding interval becomes wide and PPM decreases.
- 2: Productivity $50 \%$ - The paper feeding interval becomes much wider and PPM decreases further.
- For a thin paper, follow the set value in this order: [Service Mode] -> [Machine] -> [PPM Control Choice].

3. Touch [END].
4. Check the print image for any image problem.

### 5.4.17 Move Scanner to Home

(1) Use

- Move the LED exposure unit to the scanner packing brackets mounting position (home) to prevent any mechanical damages when moving the main body.
NOTE
In the following case, do not move it to the home position.
- Occurrence of troubles related to IR

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine] -> [Move Scanner to Home].

Touch [Start] to shift the standby position of the scanner slider to the home position.
Turn OFF the main power switch.
Attach the scanner packing brackets to fix the scanner.

### 5.5 Firmware Version

### 5.5.1 Use

- To check the firmware version.
- Use when the firmware is upgraded.
- When the firmware is upgraded or PWB is replaced.

### 5.5.2 Procedure

1. Call the Service Mode to the screen.
2. Touch [Firmware Version].
3. Touch the $[\uparrow] /[\downarrow]$ key to check the firmware version.

### 5.6 Imaging Process Adjustment

### 5.6.1 Gradation Adjust

(1) Use

- To make an automatic adjustment of gradation based on the test pattern produced and the readings taken by the scanner.
- Color reproduction performance becomes poor.
- The drum unit, developing unit, or transfer belt unit has been replaced.
- The Adj. Values of "Dark" and "Highlight" shown on the gradation adjust screen represent how much corrections are made to produce an ideal image output. Conv. Value shows the difference from the ideal image density.
- The closer the Conv. Value to 0 , the more ideal the image.

| Mode key | Description |
| :---: | :---: |
| Stabilizer | - The image stabilization is performed. The controller reflects the image stabilization result in the gradation adjustment table to update the table. <br> - After the image stabilization is performed, [Printer] / [Copy] key will become selectable. |
| Printer (600dpi) | Detect the gradation reproducibility of the gradation reproduction method (gradation screen, resolution screen) for 600dpi print mode, and correct the gradation adjustment table. |
| Printer (1200dpi) | Detect the gradation reproducibility of the gradation reproduction method (gradation screen, resolution screen) for 1200dpi print mode, and correct the gradation adjustment table. |
| Copy | Detect the gradation reproducibility of the following gradation reproduction methods, and correct the gradation adjustment table. <br> - Compression screen (reduce the data volume by 1 bit from 8 bit of each color while maintaining above a certain quality of characters/images) <br> - FFET (reproduce the character edges smoothly without using the screen) |

Example of the gradation adjustment screen (Printer-600dpi).

Example of the gradation adjustment screen (Printer-1200dpi).

Example of the gradation adjustment screen (Copy).

## (2) Procedure

NOTE

- When executing the gradation adjustment, make sure to use the white paper for color copy

1. Call the Service Mode to the screen.
2. Touch these keys in this order: [Image Process Adjustment] -> [Gradation Adjust].
3. Touch [Stabilizer] and the Start key to perform image stabilization.

NOTE

- Before executing Gradation adjust, be sure to perform Stabilizer.

4. Select Print or Copy and select the paper size on which test pattern is printed.

NOTE

- When [Printer (1200 dpi) is specified, [A3S/11x17S] not displayed.

5. Press the Start key to let the machine produce a test pattern.

NOTE

- When the image stabilization performed in step 3 is NG, the Start key stops functioning.
- When one of the alert codes, P-5, P-6, P-7, P-8, P-9, and P-28 is on the screen and [Printer] is selected, the Start key stops functioning.
- When "Printer ( 1200 dpi )" is specified, two sheets of A4 or $8-1 / 2 \times 11$ paper will be output.

6. Place the test pattern produced on the original glass.

NOTE

- Depending on the size of the test pattern, it is set in a different position. Set the test pattern according to the instructions displayed on the control panel.

7. Place ten blank sheets of paper on the test pattern and lower the original cover.
8. Press the Start key. (The machine will then start scanning the test pattern.)
9. Touch $[\mathrm{OK}]$ and repeat steps from 4 through 8 twice. (a total of three times)
10. Touch [Gradation Adjust] to display the Adj. Values and Conv. Values of each color ( $\mathrm{C}, \mathrm{M}, \mathrm{Y}$ and K) for Dark and Highlight.
11. Use the following procedures to check the Conv. Value.

NOTE

- Dark: $\mathbf{0 \pm 1 0 0}$ and Highlight: $\mathbf{0 \pm 6 0}$ : It completes the adjustment procedure.
- If neither Dark nor Highlight falls outside the ranges specified above: Perform steps from 4 to 8.
- If the convergence falls within the specified range after the second Gradation Adjustment, further adjustment may not be necessary.
- If a fault is detected, " 0 " is displayed for all values. In that case, after turning off the main power switch, turn it on again more than 10 seconds after and then make the gradation adjustment again.
- If either dark or highlight still remains outside the specified ranges perform Max Image Density Adj.
- If a total of four sequences of gradation adjust do not bring the values into the specified range, check the image.
- If the image is faulty, perform the troubleshooting procedures for image problems.

### 5.6.2 Stabilizer

(1) Stabilization Only
(a) Use

- The image stabilization sequence is carried out without clearing the historical data of image stabilization control.
- Use if an image problem persists even after gradation adjustment has been executed.
- When [Max Image Density Adj] and [Image Background Adj] of Service Mode are changed.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] $->$ [Stabilizer].
3. Touch [Stabilization Only].
4. Press the Start key to start Stabilizer.

The Start key turns orange and stays lit up orange during the Stabilizer sequence.
5. Stabilizer is completed when the Start key turns blue.

## (2) Initialize+Image Stabilization

(a) Use

- To carry out an image stabilization sequence after the historical data of image stabilization control has been initialized.
- Use if an image problem persists even after [Gradation Adjustment] has been executed.
- Use if tone reproduction and maximum density are faulty even after image stabilization has been executed.
- When color shift correction is needed again after the machine maintenance.
- After executing the print head skew reset.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [Stabilizer].
3. Touch [Initialize+Image Stabilization].
4. Press the Start key to start Stabilizer.

The Start key turns orange and stays lit up orange during the Stabilizer sequence.
5. Stabilizer is completed when the Start key turns blue.

### 5.6.3 Density Balance Adjust (bizhub C658/C558/C458)

(1) Use

- To adjust the density balance of the main scanning direction by scanning the output test pattern.
- The correction value adjusted by this function is applied to the following:

| Function | Menu | Correction value adjusted items |
| :--- | :--- | :--- |
| Copy function | [Original Type] | $\bullet[$ Photo-Printed] |
|  |  | [Photo-PhotoPaper] |

| Function | Menu | Correction value adjusted items |
| :---: | :---: | :---: |
| Utility mode | [User Settings] -> [Printer Settings] -> [Basic Settings] -> [Color Setting] | - [Document] <br> - [Photo] |
| Print function (printer driver settings) | [Printer Settings] -> [Quality] -> [Color Setting] | - [DTP] <br> - [Web] |

## (2) Procedure

1. Call the Service Mode to the screen
2. Select [Printer (resolution)] or [Printer (Gradation)].
3. Select the color to be corrected.
4. Load one of Tray 1, Tray 2, Tray 3, and Tray4 with A4 paper. (Load one of them with Letter only if [Marketing Area] is [US].)
5. Press the Start key to let the machine produce a test pattern.
6. Place the test pattern produced on the original glass.
7. Press the Start key and scan the test pattern.
8. If the scanning finishes successfully, start the $2 n d$ scanning following the instruction on the control panel.
9. Set the test pattern rotated by 180 degrees on the original glass.
10. Press the Start key and scan the test pattern.
11. If the scanning finishes successfully, press [Print Test Pattern] to output the adjusted test pattern.
12. Check the adjusted test pattern.
13. To apply the adjusted correction value, press [Reflect Adj Values], then [Reflect] and [OK].

NOTE

- Select [Do Not Reflect] and press [OK] not to apply the adjusted correct value. In this case, the corrected value is not applied but stored.
- Touching [Initialization] clears a stored correction value.

### 5.6.4 Max Image Density Adj

(1) Use

- To adjust gradation, color, and image density to target reproduction levels by varying the maximum amount of toner sticking to paper through auxiliary manual fine-adjustment of gamma of each color after gradation adjust.
- An image quality problem is not corrected even after gradation adjust has been run.

## (2) Default setting

- 0
(3) Setting range
- -10 to +10 (step: $1^{*}$ )
*: 1 step corresponds to 0.03 in density difference.

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [Max Image Density Adj].
3. Select [Copy] or [Printer].
4. Select the color to be adjusted.
5. Enter the new setting from the 10-key pad and [+/-].

- To increase the maximum amount of toner sticking, increase the setting value.
- To decrease the maximum amount of toner sticking, decrease the setting value.

6. Touch [END] to return to the [Imaging Process Adjustment] menu screen.
7. Touch [Stabilizer].
8. Touch [Stabilization Only].
9. Press the Start key to validate the adjustment value.
10. Check the print image for any image problem.

## NOTE

- If the setting value has been changed, be sure to run an image stabilization sequence to make valid the new value.

### 5.6.5 Image Background Adj

(1) Use

- To adjust the highlight portion (fog level) to the target reproduction level by making an auxiliary manual fine-adjustment of $\gamma$ of each color after gradation adjust.
- Use when a foggy background occurs due to a printer problem.

## (2) Default setting

- 0
(3) Setting range
- -5 to +5 (step: $1^{*}$ )
*: 1 step corresponds to 10 V .

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [Image Background Adj].

Select the color to be adjusted.
Enter the new setting from the 10-key pad and [+/-] key.

- To make the background level foggier, decrease the setting value.
- To make the background level less foggy, increase the setting value.

5. Touch [END] to return to the [Imaging Process Adjustment] menu screen.
6. Touch [Stabilizer].
7. Touch [Stabilization Only].
8. Press the Start key to validate the adjustment value.
9. Check the print image for any image problem.

NOTE

- If the setting value has been changed, be sure to run an image stabilization sequence to make valid the new value.

### 5.6.6 Paper Separation Adjustment

(1) Use

- By changing the period between the activation of the registration roller and the 2nd image transfer output, the paper separation position can be adjusted for the 1 st and $2 n d$ sides of paper.
- To ensure proper balance between paper separating and image transferring performances by varying the paper separation position applied for duplex printing of thin paper ( 52 to $59 \mathrm{~g} / \mathrm{m}^{2}$ ) in hot and humid conditions.
(2) Default setting
- 0
(3) Setting range
- -10 mm to +10 mm (step: 0.1 mm )

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [Paper separation adjustment].
3. Select [First Side], [Second Side], [Thin Paper Front] or [Thin Paper Back].
4. Enter the new setting from the $[+] /[-]$ key.

- Priority on paper separation performance: Increase the setting value
- Priority on image transfer performance: Decrease the setting value

5. Touch [END] to validate the setting value.
6. Check the print image for any image problem.

### 5.6.7 Monochrome Density Adjustment

(1) Use

- To fine-adjust the density of the printed image for a black print.
- To vary the density of the printed image of a black print
(2) Default setting
- 0
(3) Setting range
- -2 to +2 (step: 1)
(4) Procedure

1. Call the Service Mode to the screen.
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Monochrome Density Adjustment]
3. Touch [Lighter] or [Darker] as necessary to correct the image density.

- If the black is light, touch the Darker key.
- If the black is dark, touch the Lighter key

4. Touch [END] to validate the setting value.

### 5.6.8 Removable Voltage Adjust

(1) Use

- To allow the basic charge neutralizing voltage to be adjusted
- To prevent separation failure (jam, paper conveyance failure) that may occur when paper other than recommended one is used by adjusting the neutralization voltage to the one that suits the type of paper the user uses.

## (2) Default setting

- Auto
(3) Setting range

```
-3 to +3 (Step: 1*)
*1: step is equivalent to 500 V .
```

(4) Procedure

Call the Service Mode to the screen.
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Removable Voltage Adjust].

Select [First Side], [Second Side], [Thin Paper Front] or [Thin Paper Back].
Enter the new setting from the $[+] /[-]$ keys.

- To increase the neutralization voltage, increase the setting value.
- To decrease the neutralization voltage, decrease the setting value.

5. Touch [END] to validate the setting value.
6. Check the print image for any image problem.

## NOTE

- Select [Auto] at each paper type to automatically control the neutralization voltage without using the neutralization voltage setting value.

### 5.6.9 TCR Level Setting

(1) Use

- To adjust the T/C control level when an abnormal image density occurs as a result of a change in the amount of charge of toner and carrier due to an environmental change.
- Use when T/C changes due to changes in environmental conditions of the user site.

## (2) Default setting

- 0
(3) Setting range
- -3 to +3 (1 step in positive (+) direction: $0.5 \%$ increase, 1 step in negative (-) direction: $0.5 \%$ decrease, Center value 0 corresponds to 6.5 \% T/C ratio.)
(4) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [TCR Level Setting].
3. Enter the new setting from the 10-Key pad and [+/-] key.

- To increase T/C, increase the setting value.
- To decrease T/C, decrease the setting value.

4. Touch [END] to validate the adjustment value.
5. Check the print image for any image problem.

### 5.6.10 Transfer Voltage Fine Adj

## (1) Primary transfer adj.

(a) Use

- Adjust the output value for the 1st image transfer voltage.
- To use when white spots appeared.
(b) Default setting
- 0
(c) Setting range
- -8 to +7 (step: $1^{*}$ )
- *1: step is equivalent to $1 \mu \mathrm{~A}$.

## (d) Procedure

1. Call the Service Mode to the screen.
2. Select [Test Mode] -> [Halftone Pattern] to output the red or green test pattern.
3. When the test pattern image has white spots, adjust with the following procedure.
4. Touch [Imaging Process Adjustment] -> [Transfer Voltage Fine Adj].
5. Select [Primary transfer adj.].
6. Select the color.
7. Enter the new setting from the $[+]$ / [-] key.

- Increase the output value for the 1st image transfer voltage: Increase the setting value (white spots will decrease)
- Decrease the output value for the 1st image transfer voltage: Decrease the setting value.

8. Touch [END] to validate the setting value.

Gradually increase the setting value to the acceptable white spots level while checking the test pattern.
NOTE

- Photo conductor memory may occur by taking measure to white spots occurred by increasing the 1st image transfer voltage to adjust it.
- Check the image on the test pattern or the color chart when adjusting.
(2) 2nd Transfer Adj.
(a) Use
- Adjust the 2nd image transfer output (ATVC) on the 1st page and the 2nd page for each paper type.
- To use when the transfer failure occurs.
- Pressing the [AUTO] key down activates the 2nd image transfer amperage upper and lower limit control. In this case, the machine uses the voltage determined by the auto transfer voltage control and the 2nd image transfer voltage fine adj value does not take effect.
(b) Default setting
- Auto
(c) Setting item

| 600dpi - Front | Plain - Color, Normal Paper - Black, Normal Paper - Glossy, Thin Paper - Color, Thin Paper - Black, Thick1 - <br> Color, Thick Paper1 - Black, Thick1+ - Color, Thick Paper1+ - Black, Thick2, Thick3, Thick4, Post., Envelope, <br> OHP Film, Banner Thick1+, Banner Thick2, Banner Thick3 |
| :--- | :--- |
| 600dpi - Back | Plain - Color, Normal Paper - Black, Thin Paper - Color, Thin Paper - Black, Thick1, Thick1+, Thick2, Thick3, <br> Thick4, Post. |
| 1200dpi - Front | Plain - Color, Normal Paper - Black, Thin Paper - Color, Thin Paper - Black, Thick1 - Color, Thick Paper1 - <br> Black, Thick1+ - Color, Thick Paper1+ - Black, Thick2, Thick3, Thick4, Post., Envelope, OHP Film |
| 1200dpi - Back | Plain - Color, Normal Paper - Black, Thin Paper - Color, Thin Paper - Black, Thick1, Thick1+, Thick2, Thick3, <br> Thick4, Post., |

## (d) Setting range

- -8 to +7 (step: 1 *)
- *: 1 step is equivalent to 100 V .

## (e) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [Transfer Voltage Fine Adj].
3. Select [2nd Transfer Adj].
4. Select the image side (First Side or Second Side) and resolution ( 600 dpi or 1200 dpi ) when a transfer failure occurs.
5. Select the paper type with the transfer failure.
6. Enter the new setting from the $[+] /[-]$ keys.

- To increase the ATVC value (in the direction of a foggier image), increase the setting value.
- To decrease the ATVC value (in the direction of a less foggy image), decrease the setting value.

7. Touch [END] to validate the setting value.
8. Check the print image for any image problem.

## NOTE

- To automatically control the 2nd image transfer output without using the 2nd image transfer voltage fine adj value, press [Auto].

### 5.6.11 Charge AC Output fine adjustment

(1) Use

- Adjusts the charging AC voltage applied to the charge roller.
- Adjusts the voltage when there are image problems (fogging, white spots, etc).
- Increases the setting when there are image problems (fogging, white spots, etc).

## (2) Default setting

- 0
(3) Setting range
- -12 to 8 (step: $1^{*}$ )
*: 1 step is equivalent to 25 Vpp .

### 5.6.12 Thick Paper Density Adjustment

(1) Use

- To fine-adjust density of printed images of each color for thick paper.
- To change the density of the printed image for each color with thick paper.
(2) Default setting
- 0
(3) Setting range
- -5 to +5 (step: 1 )
(4) Procedure

1. Call the Service Mode to the screen.
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Thick Paper Density Adjustment].
3. Touch the Lighter or Darker key for the desired color to correct the image density.

- Light color: Touch the Darker key.
- Dark color: Touch the Lighter key.

4. Touch [END] to validate the setting value.

### 5.6.13 Grad/Dev AC Bias V Selection

(1) Use

- Changes the developing AC voltage, charging AC voltage and 1st. image transfer current settings.
- Turn ON to lower the above-mentioned voltages and prevent white spots caused by leakage.
- Used when white spots occur on the entire image surface in low atmospheric pressure environments, such as in high altitudes, or when void areas occur on a yellow halftone pattern image or a solid pattern image.

## (2) Default setting

- OFF
(3) Setting item
- ON
- OFF

### 5.6.14 Manual Toner Add

## (1) Manual Toner Add

(a) Use

- To adjust the set T/C level by replenishing an auxiliary supply of toner when a low ID occurs due to a lowered T/C after large numbers of prints have been made of originals having a high image density.
- When there is a drop in T/C ratio.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [Manual Toner Add].
3. Select the color, for which supply of toner is to be replenished.
4. Pressing the Start key will let the machine detect the current toner density and; if the density is lower than a reference value, a toner replenishing sequence and then a developer agitation sequence are run.
5. Operation above is repeated maximum of ten sets of times with one set consisting of three sequences until it reaches to the reference value. When it is higher than the reference value, only the agitation is conducted.

## (2) Hopper Toner Filling

(a) Use

- To fill the sub hopper with toner and perform agitate in the developing unit.
- Used when toner is manually supplied to the toner hopper and agitate in the developing unit is performed.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [Imaging Process Adjustment] -> [Manual Toner Add] -> [Hopper Toner Filling].
3. Press the Start key to start filling and agitating operations.

### 5.7 CS Remote Care (Outlines)

<Service Mode screen>

- CS Remote Care enables the machine and the computer at CS Remote Care center to exchange data through telephone/fax line, network or E-mail in order to control the machine.
- CS Remote Care enables the machine to call the computer at the center when trouble occurs. It also enables the computer at the center to contact the machine for the necessary data.
- Data which CS Remote Care handles can be divided into the following groups.
- Data which show the status of use of the machine such as total count, PM count.
- Data which show the abnormal situation on the machine such as where and how often errors occur.
- Data on adjustment
- Data on setting
<PageScope Web Connection display>

CE Password

- CS Remote Care can be set also from PageScope Web Connection. Enter the following address, then enter the CE password and touch [OK].
- http://(IP address)/csrc_index.html
- For the setting procedure, see I.5.8 Setting up the CS Remote Care.

### 5.8 Setting up the CS Remote Care

## NOTE

- For resetting up the machine which CS Remote Care has already been set up, clear the RAM for CS Remote Care before resetting.
- When using a telephone line modem for connection, use the data modem which is based on the ITU-T recommendations V.34/ V. 32 bis/V. 32 and AT command.

### 5.8.1 Using the telephone line modem

1. Register the device ID

- Register the device ID to the application at CS Remote Care center. NOTE
- The initial connection is not available unless the device ID is registered.

2. Connecting the modem

- Turn the power for the modem OFF. Connect the machine and the modem with a modem cable. Connect the modem and the modular jack with a modular cable.
NOTE
- For connecting the modular cable, see the manual for the modem.

3. Inputting the ID code
4. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
5. Input the seven digits ID of the service person, and touch [ID Code] again.
6. Clearing the RAM
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
8. Touch [RAM Clear].
9. Select [Set], and touch [OK].
10. Selecting the CS Remote Care function

- Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Setting], and touch [Modem].

6. Inputting the ID code
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code]
8. Input the seven digits ID of the service person, and touch [ID Code] again.
9. Setting the date and time for CS Remote Care
10. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
11. Touch [Date \& Time Setting]
12. Input the date, time and the time zone using the 10-key pad, and touch [Set].
13. Setting the Center ID
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
15. Touch [Basic Setting] -> [Center ID], and input the Center ID (five digits).
16. Confirm the Device ID
17. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
18. Touch [Basic Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

- [Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].

10. Setting the telephone number of the Center
11. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
12. Touch [Basic Setting] -> [Center Telephone Number].
13. Input the telephone number of the center using the 10-key pad and [P], [T], [W], [-].
14. Inputting the device telephone number
15. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
16. Touch [Basic Setting] -> [Device Telephone Number].
17. Input the Device telephone number using the10-key pad and [P], [T], [W], [-].
18. Inputting the AT command for initializing the modem
19. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
20. Touch [AT Command].
21. Input AT Command.

NOTE

- Change this command only when it is necessary. (They do not need to be changed in normal condition.)
- For details on AT command, see the manual for the modem.

13. Setting the Software SW for CS Remote Care

NOTE

- This setting is not normally necessary. Take this step only when necessary in a specific connecting condition.

14. Executing the initial transmission
15. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
16. Touch [Basic Setting] -> [Initial Transmission].
17. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.
18. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.

NOTE

- The initial transmission key at the right bottom of the screen will be displayed only when the center ID, the device ID, Telephone number of the center and the device telephone number have been input. However, if an invalid value is input as the device ID, the initial transmission key is not displayed.

### 5.8.2 Using the Fax line modem

## NOTE

- Setting will be available only when the optional fax board is installed.

1. Register the device ID

- Register the device ID to the application at CS Remote Care center. NOTE
- The initial connection is not available unless the device ID is registered.

2. Remove the telephone line modem

- Be sure to remove the telephone line modem when the fax line is used.

3. Inputting the ID code
4. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
5. Input the seven digits ID of the service person, and touch [ID Code] again.
6. Clearing the RAM
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
8. Touch [RAM Clear].
9. Select [Set], and touch [OK].
10. Selecting the CS Remote Care function

- Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Setting], and touch [Fax].

6. Inputting the ID code
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
8. Input the seven digits ID of the service person, and touch [ID Code] again.
9. Setting the date and time for CS Remote Care
10. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
11. Touch [Date \& Time Setting]
12. Input the date, time and the time zone using the 10-key pad, and touch [Set].
13. Setting the Center ID
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
15. Touch [Basic Setting] -> [Center ID], and input the Center ID (five digits).
16. Confirm the Device ID
17. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
18. Touch [Basic Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

- [Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].

10. Setting the telephone number of the Center
11. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
12. Touch [Basic Setting] -> [Center Telephone Number].
13. Input the telephone number of the center using the 10-key pad and [P], [T], [W], [-].
14. Inputting the device telephone number
15. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
16. Touch [Basic Setting] -> [Device Telephone Number].
17. Input the Device telephone number using the10-key pad and [P], [T], [W], [-].
18. Setting the Software SW for CS Remote Care NOTE

- This setting is not normally necessary. Take this step only when necessary in a specific connecting condition.

13. Executing the initial transmission
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
15. Touch [Basic Setting] -> [Initial Transmission].
16. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.
17. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.

## NOTE

- The initial transmission key at the right bottom of the screen will be displayed only when the center ID, the device ID, Telephone number of the center and the device telephone number have been input. However, if an invalid value is input as the device ID, the initial transmission key is not displayed.

### 5.8.3 Using the E-mail

1. Register the device ID

- Register the device ID to the application at CS Remote Care center. NOTE
- The initial connection is not available unless the device ID is registered

2. Remove the telephone line modem

- Be sure to remove the telephone line modem when e-mail is used.

3. Inputting the ID code
4. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
5. Input the seven digits ID of the service person, and touch [ID Code] again.
6. Clearing the RAM
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
8. Touch [RAM Clear].
9. Select [Set], and touch [OK].
10. Selecting the CS Remote Care function

- Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Setting], and touch [E-Mail 1] or [E-Mail 2].

6. Inputting the ID code
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
8. Input the seven digits ID of the service person, and touch [ID Code] again.
9. Setting the date and time for CS Remote Care
10. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
11. Touch [Date \& Time Setting].
12. Input the date, time and the time zone using the 10-key pad, and touch [Set].
13. Setting the Center ID
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
15. Touch [Basic Setting] -> [Center ID], and input the Center ID (five digits).
16. Confirm the Device ID
17. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
18. Touch [Basic Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

- [Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].

10. Encryption setting
11. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
12. Touch [Basic Setting] and select either Encryption or No Encryption.
13. Retransmission interval on e-mail delivery error

- When selecting [E-mail 2], set the retransmission interval on e-mail delivery error in software switch setting.

12. Setting the Respond Timeout
13. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
14. Touch [Respond Timeout] and enter the response timeout using the 10-key pad.

NOTE

- Under normal conditions, there is no need to change the default setting.

13. Setting the E-mail address
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Server Set].
15. Touch [Server for RX], and set POP3 server address, POP3 login name, POP3 password and POP3 port number.
16. Touch [Receive], and set the E-Mail address, Mail Check, Connection Time Out and APOP Authentication.
17. Touch [Send], and set the SMTP server address, SMTP port number, Connection Time Out, and APOP Authentication.
18. Touch [TX/RX Test], and press Start key to carry out a transmission/reception test. If it fails to exchange messages, see the error message to take necessary measure, and try again.
19. When selecting [E-Mail2]:
20. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
21. Touch [Schedule] and set the schedule of periodic transmission.
22. Touch [Center Notifi. Item] and set items that will be reported to the Center.
23. Executing the initial transmission
24. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
25. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.

NOTE

- The initial transmission key at the right bottom of the screen will be displayed only when the center ID, device ID and the EMail address have been input. However, if an invalid value is input as the device ID, the initial transmission key is not displayed.

3. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.

- If communication error between the machine and Center occurs, check the error code that appears.

16. Receiving the initial connection E-mail message

- Sending the initial connection E-mail message from the center to the address of the copier. NOTE
- When receiving the initial connection E-mail message from the center while CS Remote Care-related screen is being displayed, the current setting information will be deleted, and CS Remote Care setting will be displayed.
- For sending the initial connection E-mail, see the manual for CS Remote Care center.
- Messages can be exchanged only between the center with initial connection and the copier.
- The initial connection from the center will be carried out, and the E-mail address of the center will be stored in the copier.
- When the initial registration is complete, the E-mail address of the center will be displayed by selecting [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting] -> [Basic Setting] -> [E-Mail address].

### 5.8.4 When using a WebDAV server in http communication

## NOTE

- When MFP is connected to the Internet via a proxy, the proxy server related settings are necessary in advance. The proxy settings used in the http communication for CS Remote Care is configured in [Administrator Settings] -> [Network Settings] -> [WebDAV Settings] -> [Proxy Setting for Remote Access].
(1) Bilateral communication

1. Register the device ID

- Register the device ID to the application at CS Remote Care center.

## NOTE

- The initial connection is not available unless the device ID is registered.

2. Remove the telephone line modem

- Be sure to remove the telephone line modem when the http communication is used.

3. Inputting the ID code
4. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
5. Input the seven digits ID of the service person, and touch [ID Code] again.
6. Clearing the RAM
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
8. Touch [RAM Clear].
9. Select [Set], and touch [OK].
10. Selecting the CS Remote Care function

- Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Setting], and touch [http1].

6. Inputting the ID code
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
8. Input the seven digits ID of the service person, and touch [ID Code] again.
9. Setting the date and time for CS Remote Care
10. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
11. Touch [Date \& Time Setting].
12. Input the date, time and the time zone using the 10-key pad, and touch [Set].
13. Setting the Center ID
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
15. Touch [Basic Setting] -> [Center ID], and input the Center ID (five digits).
16. Confirm the Device ID
17. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
18. Touch [Basic Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

- [Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].

10. Encryption setting
11. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
12. Touch [Basic Setting] -> [Client Setting] and select either Encryption or No Encryption.
13. Heart Beat
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings]] -> [Detail Setting] -> [Basic Setting], and touch [Heart Beat].
15. In [Communication], set whether or not to enable Heart Beat communication. (Default: No)
16. Touch [Comm. Interval] and enter a Heart Beat transmission interval (1 to 256 minutes, Default: 30 minutes).
17. In [Specified Transmission], set whether or not to enable Heart Beat transmission at a specified interval. (Default: Yes)
18. Touch [Hour] and [Minute] and enter a time for specified transmission.

NOTE

- Heart Beat is a feature that uploads a Heart Beat file to the registered web server at a specified interval to report that the device is operating. Heart Beat files include total counter and status information.

12. Polling interval
13. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting].
14. Touch [Basic Setting] -> [Polling Interval] and enter the polling interval (1 to 256 min., default: 5 min .).
15. Setting the http server
16. Select [Service Mode] -> [CS Remote Care], and touch [Server Settings].
17. Touch [HTTP Server Settings] and set a URL address, account, password, and port number.
18. Touch [SSL Settings] and make SSL settings.
19. Setting the Software SW for CS Remote Care

NOTE

- This setting is not normally necessary. Take this step only when necessary in a specific connecting condition.

15. Executing the initial transmission
16. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
17. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.

NOTE

- The initial transmission key at the right bottom of the screen will be displayed only when the center ID, device ID and the URL address have been input. However, if an invalid value is input as the device ID, the initial transmission key is not displayed.

3. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.

- If communication error between the machine and Center occurs, check the error code that appears.
(2) Unilateral communication: Device to Center

1. Register the device ID

- Register the device ID to the application at CS Remote Care center.

NOTE

- The initial connection is not available unless the device ID is registered.

2. Remove the telephone line modem

- Be sure to remove the telephone line modem when the http communication is used.

3. Inputting the ID code
4. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
5. Input the seven digits ID of the service person, and touch [ID Code] again.
6. Clearing the RAM
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
8. Touch [RAM Clear].
9. Select [Set], and touch [OK].
10. Selecting the CS Remote Care function

- Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Setting], and touch [http2].

6. Inputting the ID code
7. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
8. Input the seven digits ID of the service person, and touch [ID Code] again.
9. Setting the date and time for CS Remote Care
10. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
11. Touch [Date \& Time Setting]
12. Input the date, time and the time zone using the 10-key pad, and touch [Set].
13. Setting the Center ID
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
15. Touch [Basic Setting] -> [Center ID], and input the Center ID (five digits).
16. Confirm the Device ID
17. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
18. Touch [Basic Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

- [Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].

10. Encryption setting
11. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting]
12. Touch [Basic Setting] -> [Client Setting] and select either Encryption or No Encryption.
13. Notification Setting
14. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting], and touch [Notification Setting].
15. Touch [Schedule] and set the schedule of periodic transmission
16. Touch [Center Notifi. Item] and set items that will be reported to the Center.
17. Setting the http server
18. Select [Service Mode] -> [CS Remote Care], and touch [Server Set].
19. Touch [HTTP Server Settings] and set a URL address, account, password, and port number.
20. Touch [SSL Settings] and make SSL settings.
21. Setting the Software SW for CS Remote Care

NOTE

- This setting is not normally necessary. Take this step only when necessary in a specific connecting condition.

14. Executing the initial transmission
15. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
16. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.

NOTE

- The initial transmission key at the right bottom of the screen will be displayed only when the center ID, device ID and the URL address have been input. However, if an invalid value is input as the device ID, the initial transmission key is not displayed.

3. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.

- If communication error between the machine and Center occurs, check the error code that appears.

### 5.9 Software SW setting for CS Remote Care

## NOTE

- Software SW bits data are written into the memory region on the MFP board every time a change is made. In case you changed bit data by accident, be sure to restore the previous state.
- Do not change any bit not described on this table.

### 5.9.1 Input procedure

1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting], and touch [Software Switch Setting].
2. Touch [Switch No.], and input the switch number (two digits) using the 10-key pad.
3. Touch [Bit Assignment], and select switch bit number using the arrow keys, and input 0 or 1 using the 10-key pad. (For setting by hexadecimal numbers, touch [HEX Assignment] key, and input using the 10-key pad or A to F keys.)
4. Touch $[\mathrm{Fix}]$.

NOTE

- About functions of each switch, see to " I.5.9.2 List of software SW for CS Remote Care."

### 5.9.2 List of software SW for CS Remote Care

| SW No. | Functions | Ref. page |
| :---: | :--- | :--- |
| 01 | • Dial Mode, Line for send only, Baud rate | Emergency transmission, Date specified transmission, Call parts replace date, <br> 02 <br> Call drum replace date, Call regular service date (PM), Auto call on the IC Life, <br> replacement IR shortage, Auto call on the zero reset of the fixed parts |

| 07 | - Redial for response time out | " I.5.9.9 SW No. 07" |
| 08 | - Retransmission interval on E-Mail/http delivery error | " I.5.9.10 SW No. 08" |
| 09 | - Retransmission times on E-Mail/http delivery error | " I.5.9.11 SW No. 09" |
| 10 | - Time zone settings | "I.5.9.12 SW No. 10" |
| 11 | - Timer 1 RING reception -> CONNECT reception | "I.5.9.13 SW No. 11" |
| 12 | - Timer 2 Dial request completed -> CONNECT reception | " I.5.9.14 SW No. 12" |
| 13 | - Reservation | - |
| 14 | - Timer 4 Line connection -> Start request telegram delivery | "I.5.9.15 SW No. 14" |
| 15 | - Timer 5 Wait time for other side's response | " I.5.9.16 SW No. 15" |
| 16 | - Reservation | - |
| 17 | - Reservation | - |
| 18 | - Attention display <br> To set whether to give the alarm display when using the modem but the power for the modem is OFF. | " I.5.9.17 SW No. 18" |
| 19 | - Reservation | - |
| 20 | - Reservation | - |
| 21 | - Automatic transmission of chronological misfeed data at the time of transmission of misfeed frequent occurrence warning, transmission of paper-based misfeed frequent occurrence warning, transmission of original-based misfeed frequent occurrence warning | "I.5.9.18 SW No. 21" |
| 22 | - Paper-based misfeed frequent occurrence threshold value | " I.5.9.19 SW No. 22" |
| 23 | - Original-based misfeed frequent occurrence threshold value | " I.5.9.20 SW No. 23" |
| $\begin{gathered} 24 \\ : \\ 40 \end{gathered}$ | - Reservation | - |

### 5.9.3 SW No. 01

## (1) Default

| Bit | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 1 |
| HEX | 81 |  |  |  |  |  |  |  |

(2) Functions

| Bit | Functions | Logic |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 0 | 1 |  |
| 7 | Baud rate | 0110 |  | 9600 bps |
| 6 |  | 0111 |  | 19.2 Kbps |
| 5 |  | 1000 |  | 38.4 Kbps |
| 4 |  | Other |  | Not available |
| 3 | Reservation |  |  |  |
| 2 |  |  |  |  |
| 1 | Line for send only | Disable | Enable |  |
| 0 | Dial Mode | Pulse | Tone |  |

### 5.9.4 SW No. 02

(1) Default

| Bit | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 | 1 | 1 | 1 | 1 | 1 | 1 |  |
| HEX |  |  |  |  |  |  |  |  |

## (2) Functions

| Bit | Functions | Logic |  | Description |
| :---: | :--- | :---: | :---: | :---: |
|  |  | 0 | 1 |  |
| 7 | Auto call on the zero reset of the fixed parts <br> replacement | Disable | Enable |  |
| 6 | Auto call of the IR shortage | Disable | Enable |  |
| 5 | Auto call on the IC Life | Disable | Enable |  |
| 4 | Call regular service date (PM) | Disable | Enable |  |
| 3 | Call drum replace date | Disable | Enable |  |
| 2 | Call parts replace date | Disable | Enable |  |
| 1 | Date specified transmission | Disable | Enable |  |
| 0 | Emergency transmission | Disable | Enable |  |

### 5.9.5 SW No. 03

(1) Default

| Bit | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 0 | 0 | 0 | 0 | 1 | 0 | 1 |  |
| HEX | 0 A |  |  |  |  |  |  |  |

(2) Functions

| Bit | Functions | Logic |  | Description |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 0 | 1 |  |
| 7 | Reservation |  |  |  |
| 6 |  |  |  |  |
| 5 |  |  |  |  |
| 4 |  |  |  |  |
| 3 | Auto call on the waste toner bottle full | Disable | Enable |  |
| 2 | Reservation |  |  |  |
| 1 | Auto call on the toner empty | Disable | Enable |  |
| 0 | Trouble Display setting | When the CSRC is not connected | When the CSRC is connected | Select the type of message to be displayed at the time of automatic trouble notification made when the CSRC is connected, either the message when the CSRC is connected or that when the CSRC is not connected. If "When the CSRC is not connected" is selected when the CSRC is connected, an automatic notification is made to the center when a trouble occurred. Only the display on the control panel shifts to the massage when the CSRC is not connected. |

5.9.6 SW No. 04

## (1) Default

### 5.10 Setup confirmation for CS Remote Care

### 5.10.1 Use

- Follow the steps below to make sure that CS Remote Care has been properly set up.

### 5.10.2 Procedure

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care].
3. Check to make sure that only selected item is displayed.

### 5.11 Calling the maintenance for CS Remote Care

- When CE starts maintenance, inputting the ID code of CE (seven digits: numbers which CE can identify. They are controlled by the distributor.) will transmit the information to the Center side and tells that the maintenance has started. When the maintenance is finished, touching [Maintenance Complete] key will transmit the information to the center and tells that it is finished.

## NOTE

- The MFP sends the maintenance start information to the Center. While the MFP is in maintenance mode, the communication between the MFP and the Center is unavailable. Therefore, CE must touch [Maintenance Complete] immediately after the completion of maintenance to end maintenance mode.

### 5.11.1 When starting the maintenance

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care].
3. Touch [Maintenance Start].
4. Input the ID code using the 10-key pad.
5. Select estimated hours that elapse before the completion of the maintenance from the options of [2 hours], [4 hours], [6 hours], [ 8 hours], [10 hours], or [12 hours].
6. Touch [OK].

NOTE

- The Start key blinks while maintenance mode is being carried out
- You cannot extend the estimated hours while the maintenance is in progress.
- If you forget to touch [Maintenance Complete] after the completion of the maintenance, the maintenance completion information is automatically sent after the lapse of the selected estimated hours and the normal communication becomes available.

### 5.11.2 When finishing the maintenance

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care].
3. Touch [Maintenance Complete]

### 5.12 Calling the center from the administrator for CS Remote Care

### 5.12.1 Use

- When the CS Remote Care setup is complete, the administrator can call the CS Remote Care center.

## NOTE

- When the setup is not complete or another transmission is being carried out, the Admin. transmission key will not be displayed, and the transmission is not available.

### 5.12.2 Procedure

1. Touch [Settings] -> [System Connection]
2. Touch [Admin. transmission].
3. Press the Start key.

NOTE

- For transmitting data of the machine by calling the center on the specified date and time, refer to the manual for CS Remote Care center.

### 5.13 Checking the transmission log for CS Remote Care

### 5.13.1 Use

- The transmission log list will be output to be checked.

### 5.13.2 Procedure

1. Call the Service Mode to the screen.
2. Touch [CS Remove Care] -> [Maintenance/Default Settings] -> [Detail Setting].
3. Touch [Communication Log Print].
4. Load tray 1 or bypass tray with A4S paper.
5. Press the Start key to output transmission log.

### 5.14 Detail on settings for CS Remote Care

5.14.1 Maintenance/Default Settings - System Selection
(1) Use

- To select the system type for remote diagnosis.
- Use to newly build or change the system.
(2) Setting range
- E-Mail1
- E-Mail2
- Modem
- Fax
- http1
- http2
(3) Procedure
- Select [E-Mail 1], [E-Mail 2], [http 1], [http 2], [Modem], or [Fax].
- Fax is available only when the optional fax kit is being installed.

### 5.14.2 Maintenance/Default Settings - ID Code

(1) Use

- To register the service ID.
(2) Procedure

1. Touch [ID code] and enter the service ID.

- Enter a 7-digit code from the 10-key pad. (0000001 to 9999999)

2. Touch [ID code] to register the ID.
3. The [Detail Setting] will appear when the ID has been registered.

### 5.14.3 Maintenance/Default Settings - Detail Setting

(1) Basic Setting (E-Mail1, E-Mail2, Modem or Fax)
(a) Use

- Execute the primary setting.
- Use to register the machine to the CS Remote Care center.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touching the [Detail Setting] will display the primary setting.
<Center Setting>

- Set the center ID, Device ID, and the phone No.
- When e-mail is selected for system and all setup procedures are completed, e-mail address of the center is displayed

## NOTE

- When entering the phone number, 10-key and keys on the screen have following meanings.

| $[-]$ Pose | Waits to start transmitting after dialing |
| :--- | :--- |
| [W] Wait | Detects the dial tone of the other end |
| $[T]$ Tone dial | Carry out tone dialing |
| $[P]$ Pulse dial | Carry out pulse dialing |
| $[*],[\#]$ | To be used as necessary |

<Schedule (Only when the [E-Mail2] is selected)>

- Set the schedule of notification to the center.
- Up to three different notification schedules can be registered.
- Select the notification cycle from [Day], [Week], or [Month]. When selecting [Day] for the notification cycle, set the Day Frequency. When selecting [Week] for the notification cycle, set the Week Frequency and day of the week. When selecting [Month], set the Month Frequency and the date of the month.
<Center Notification (Only when the [E-Mail2] is selected)>
- Select the items of data that will be sent to the center in one-way transmission through E-Mail2.
- The following table shows each of the notification item keys and corresponding data.

| $[1]$ | Sales count data | $[7]$ | EKC data |
| :---: | :--- | :---: | :--- |
| $[2]$ | Error count data | $[8]$ | Adjustment data |
| $[3]$ | Service count data | $[9]$ | Coverage data |
| $[4]$ | Life count data <br> Life cycle data | $[10]$ | Not used |
| $[5]$ | CSRC-System data <br> Device config data | [11] | Not used |
| $[6]$ | History data | $[12]$ | Not used |

## NOTE

- Multiple items of data can be selected and sent at one time. However, be sure that only EKC data cannot be sent together with other items of data.
<Initial Transmission>
- Touching the Initial Transmission key will sent the information to the CS Remote Care center to register the machine. (Only when the modem or fax is selected on the system Input.)
(2) Basic Setting (http1 or http2)
(a) Use
- Execute the primary setting.
- Use to register the machine to the CS Remote Care center.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touching the [Detail Setting] will display the primary setting.
<Center Setting>

- Set the center ID.
- Display the device ID.

## <Client Setting>

- To set whether or not to encrypt communication.
<Heart Beat>
NOTE
- The heat beat function is only available to http1.
- To make Heart Beat related settings
- Heart Beat is a feature that uploads a Heart Beat file to the registered web server at a specified interval to report that the device is operating. Heart Beat files include total counter and status information.
<Polling Interval>
NOTE
- The polling interval function is only available to http1.
- To set the polling time in http communication
<Initial Transmission>
- Touching the Initial Transmission key will sent the information to the CS Remote Care center to register the machine.

## (3) Date \& Time Setting

(a) Use

- To set the data and time-of-day.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touch [Detail Setting] to access Date \& Time Setting,
4. Enter the date (month, day and year), time-of-day, and the time zone from the 10-key pad.
5. Touch [SET] to start the clock.

## (4) RAM Clear

(a) Use

- To clear the following data at the center.

Service ID, Basic setting, Date \& time setting (time zone), Software SW setting, AT command

- To be used for setting CS Remote Care.
- To be used for reset the every data of the center to default

## NOTE

- If RAM clear is selected during transmission, RAM clear processing will be implemented at the time the transmission is completed regardless of whether it is done properly or not.
(b) Default setting
- Unset
(c) Setting item
- Set
- Unset

## (5) Communication Log Print

(a) Use

- To print out the communication log.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touch [Detail Setting] to access communication log print.
4. Load a paper tray with A4S/A4 or $81 / 2 \times 11 \mathrm{~S} / 81 / 2 \times 11$ paper.
5. Select [1-Sided] or [2-Sided].
6. Press Start key to print out the communication log.

## (6) Software Switch Setting

(a) Use

- To change the CS Remote Care settings.
(b) Procedure
- Refer to " I.5.9 Software SW setting for CS Remote Care" for the setting.

## (7) Response Time Out

(a) Use

- It sets the intervals for resending e-mails when transmission error occurred.
- It can be set only when [E-Mail] is selected in [System Setting]
(b) Default setting
- 60 minutes
(c) Setting range
- 10 to 1440
(8) AT Command
(a) Use
- To set the command to be issued at the time of modem initialization
- This setting is available only when [Modem] is selected in [System Setting].
(b) Procedure
- Enter the command and touch [SET] to register.
(9) Notification Setting
(a) Use
- To make the settings of notification to the center that is performed under unilateral communication via http.
- This setting is available only when [http2] is selected in [System Setting].
(b) Procedure
<Schedule>
- Set the schedule of notification to the center.
- Up to three different notification schedules can be registered.
- Select the key of the registration number, and then touch [Enable].
- Select the notification cycle from [Day], [Week], or [Month].

When selecting [Day] for the notification cycle, set the Day Frequency.
When selecting [Week] for the notification cycle, set the Week Frequency and day of the week. When selecting [Month], set the Month Frequency and the date of the month.

- Touch [SET] to register the schedule.
<Center Notifi. Item>
- Select the notification item to the center.
- The following table shows each of the notification item keys and corresponding data.

| $[1]$ | Sales count data | $[7]$ | EKC data |
| :---: | :--- | :---: | :--- |
| $[2]$ | Error count data | $[8]$ | Adjustment data |
| $[3]$ | Service count data | $[9]$ | Coverage data |
| $[4]$ | Life count data <br> Life cycle data | $[10]$ | Not used |
| $[5]$ | CSRC-System data <br> Device config data | $[11]$ | Not used |
| $[6]$ | History data | $[12]$ | Not used |

## NOTE

- Multiple items of data can be selected and sent at one time. However, be sure that only EKC data cannot be sent together with other items of data.

### 5.14.4 Maintenance/Default Settings - Server Setting (E-Mail1 or E-mail2 is selected.)

(1) Server for RX-POP3 server
(a) Use

- To set the POP3 server address used for the CS Remote Care.
- POP3 server address can be set with IP address or the domain name.

## (b) Procedure

<Input IP Address>

- IP address version 4 format [0 to 255].[0 to 255].[0 to 255].[0 to 255]
<FQDN Input>
- Enter the domain name.

## (2) Server for RX-POP3 login name

(a) Use

- To set the login name for the POP3 server used for the CS Remote Care.
(b) Procedure
- Up to 64 characters can be used. (alphanumeric characters and symbols)
(c) Default setting
- No
(3) Server for RX-POP3 password
(a) Use
- To set the logon password for the POP3 server used for the CS Remote Care.
(b) Procedure
- Up to 15 characters can be used. (alphanumeric characters and symbols)
(c) Default setting
- No

## (4) Server for RX-POP3 port number

(a) Use

- To set the POP3 port number used for the CS Remote Care.
(b) Default setting
- 110
(c) Setting range
- 1 to 65535
(5) Receive-E-mail Address
(a) Use
- To set the e-mail address used for the CS Remote Care.
(b) Procedure
- Up to 129 characters can be used. (alphanumeric characters and symbols)
(c) Default setting
- No

## (6) Receive-Mail Check

(a) Use

- To set whether or not to use mail check and the time interval for the POP server used for the CS Remote Care.
(b) Default setting
- No
(c) Setting item
- No
- 1 to 120 min.

## (7) Receive-Connection Time-out

(a) Use

- To set the timeout period for connection during reception.
(b) Default setting
- 60 Sec
(c) Setting range
- 30 to 300 Sec
(8) Receive-APOP Authentication
(a) Use
- To set whether or not to authenticate the APOP during reception.
(b) Default setting
- No
(c) Setting item
- Yes
- No
(9) Send-SMTP server
(a) Use
- To set the SMTP sever address for transmission used for the CS Remote Care.
- SMTP server address can be set by the IP address or the domain name.
(b) Procedure
<Input IP Address>
- IP address version 4 format [0 to 255].[0 to 255].[0 to 255].[0 to 255]
<FQDN Input>
- Enter the domain name.
(10) Send-SMTP port number
(a) Use
- To set the SMTP port number for transmission used for the CS Remote Care.
(b) Default setting
- 25
(c) Setting range
- 1 to 65535
(11) Send-SMTP Connection Time-out
(a) Use
- To set the timeout period for transmission.
(b) Default setting
- 60 Sec
(c) Setting range
- 30 to 300 Sec
(12) Send-Authentication Setting
(a) Use
- To set whether or not to authenticate during transmission via SMTP server.
- To use when authenticating during transmission.

Available authentication mode: POP Before SMTP, SMTP authentication
(b) Default setting

- OFF
(c) Setting item
- OFF
- POP Before SMTP
- SMTP Authentication

## NOTE

" Setting to "POP Before SMTP" will set the time for POP Before SMTP.

- Default setting: 60 Sec
" Setting range: 0 to " 60 Sec "
- When setting to SMTP authentication, touch the "Setting Check" key for authentication.

| User ID | Enter the user ID for SMTP authentication. |
| :--- | :--- |
| Password | Enter the password for SMTP authentication. |
| Domain name | Enter the domain name for SMTP authentication. |

(13) TX/RX Test
(a) Use

- To determine the correct transmission and reception using CS Remote Care.
(b) Procedure

1. Press the Start key to let the machine start the transmission and reception test.
2. The test procedure and result will be displayed on the screen.
(14) Data Initialization
(a) Use

- To initialize the contents for the sever setting.
(b) Default setting
- No
(c) Setting item
- Yes
- No
5.14.5 Maintenance/Default Settings - Server Setting (http1 or http2 is selected)
(1) HTTP Server Settings
(a) Use
- To set a http server at the other end that is used in CS Remote Care.

## (b) Procedure

<URL>

- To set the address of the http server.
<Account>
- To set an account that is used to access the http server.
<Password>
- To set a password that is used to access the http server
<Port Number>
- To set a port number that is used to access the http server.

## (2) SSL Settings

(a) Use

- To make SSL settings of the http server at the other end that is used in CS Remote Care.
(b) Procedure
- To set whether or not to use SSL communication.

## (3) Data Initialization

(a) Use

- To initialize values in the server settings.

### 5.14.6 Product Auth. Settings

## (1) Product Authentication

(a) Use

- To set whether or not to enable product authentication.

NOTE

- When changing this setting under the condition where http is used for CS Remote Care communication, you need to perform RAM Clear and then initial transmission again.
(b) Default setting
- No
(c) Setting item
- Yes
- No
(2) WebDAV
(a) Use
- To set a WebDAV server for the product authentication.
(b) Procedure
<URL>
- URL: To set the address of the WebDAV server.
- Account : To set an account that is used to access the WebDAV server.
- Password : To set a password that is used to access the WebDAV server.
- Port Number : To set a port number that is used to access the WebDAV server.

## (3) Register Manually

(a) Use

- To install the certificate to be used in product authentication.
(b) Procedure(LMS)
<LMS>

1. Call the Service Mode to the screen.
2. Touch [CS Remote Care] -> [Product Auth. Settings].
3. Touch [Register Manually] -> [LMS].
4. Touch [Start] to communicate with LMS (License Management System) and install the certificate.
5. Check that the "Install OK" message appears.

## (c) Procedure (USB)

## NOTE

In the following conditions, installation of the certificate from a USB memory is prohibited.

- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory (Service)] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to [ON].

1. Connect the USB flash drive where the certificate obtained from LMS (License Management System) is stored to the USB port of MFP.
2. Call the Service Mode to the screen.
3. Touch [CS Remote Care] -> [Product Auth. Settings].
4. Touch [Register Manually] -> [USB].
5. Touch [Start] to install the certificate.
6. Check that the "Install OK" message appears.

### 5.14.7 Import/Export Settings

## (1) WebDAV Setting

(a) Use

- To configure WebDAV server settings used to remotely export or import MFP data (address book data, authentication setting data).

## (b) Procedure

<URL>
To set the address of the WebDAV server.
<Folder Name>

- To set a folder name of the WebDAV server that is used to transfer data. <Account>
- To set an account that is used to access the WebDAV server.
<Password>
- To set a password that is used to access the WebDAV server.

## (2) Port Number

(a) Use

- To set a port number that is used to access the WebDAV server.
(b) Procedure
- Set the port number of the WebDAV server using the 10-key pad.
(3) SSL Settings
(a) Use
- To configure the WebDAV server's SSL settings.
(b) Default setting
- No
(c) Setting item
- Yes
- No
(4) Data Initialization
(a) Use
- To initialize the settings on the server.
(b) Default setting
- No
(c) Setting item
- Yes
- No

### 5.14.8 Auto Initial Dial Setting

(1) Use

- To set whether to configure the Auto Initial Dial Setting for each CSRC communication method.
- Execute the CSRC Auto Initial Dial automatically at the first time of startup after importing [Remote Access Settings] from [Machine Import Setting].
NOTE
" This function is enabled only when "Set" is selected and the following conditions are satisfied.
- No registrations to the CSRC server have been made.
- At the first time that the main power is turned ON (reboot) after importing the CSRC server information under [Service Mode] -> [Machine Update Settings] -> [Machine Auto Update Setting] -> [Machine Import Setting].
(2) Default setting
- Unset
(3) Setting item
- Set
- Unset

### 5.15 System 1

### 5.15.1 Marketing Area

(1) Use

- To make the various settings (language, paper size, fixed zoom ratios, etc.) according to the applicable marketing area.
- Upon setup.

## (2) Procedure

Marketing Area

- Select the applicable marketing area and touch [END] to set the marketing area.

Wireless LAN Destination (This is displayed only when optional upgrade kit UK-212 or UK-215 is installed)

1. Touch the [Wireless LAN Destination].
2. Select the applicable marketing area using [+] and [-] keys, and touch [decision].
3. Turn OFF and ON the main power switch.

Fax Target

1. Touch the [Fax Target].
2. Select the applicable marketing area using [+] and [-] keys, and touch [END].

## (3) Setting item

Marketing Area

- Japan
- US
- Europe
- Others1 to 5

Wireless LAN Destination

- OT, US, CA, JP, AU, NZ, DE, GB, FR, CH, NL, BE, AT, NO, SE, FI, IE, DK, IT, ES, PT, PL, ZA, TW, SA, CN, MY, SG, KR, HK, AR, BR, VN, PH, RU, MX, IN, TH, ID, AE, KW, GR, TR, HU, SK, CZ, UA, CL
Fax Target

| Unit Change |  | Japan | US | Europe | Europe | Europe | Europe | Europe | Europe |

## NOTE

- The language used in the service mode depends on the Language Selection setting, and changes to the language as following table.

| Language Selection | Service Mode |
| :---: | :---: |
| Japanese | Japanese |
| Simplified Chinese | Simplified Chinese |
| Traditional Chinese | Traditional Chinese |
| Hangul | Hangul |
| Language other than listed above | English |

### 5.15.2 Tel/Fax Number

(1) Use

- To enter the tel/fax number of the service contact that will appear on the control panel when a malfunction occurs in the machine.
- Upon setup.
(2) Procedure
- Enter the tel/fax number from the 10-key pad. (19 digits)
- Use Interrupt key to enter "-."

### 5.15.3 Serial Number

(1) Use

- To register the serial numbers of the machine and options.
- To display the serial number of the PH unit.
- The numbers will be printed on the list output.
- To use the serial number as device ID during CS Remote Care communication.
- Upon setup.

## NOTE

- When main power switch was turned ON while the serial No. was not entered, the message to require entering the serial No. will be displayed.
- Do not change the serial number registered in the machine. If memory data is lost and entering the serial number is required, enter the original correct serial number.
Be careful to enter the correct serial number since characters other than alphanumeric can be also entered. CSRC communication is not available if a wrong serial number is entered
- The serial number of "Printer" can be checked through the following: Menu -> [Counter].

## (2) Procedure

- Type the serial numbers.
- Printer, Scanner, ADF, LCT, Output Option, Duplex, Vendor, RU, ZU, PK, PI, Fax1, Fax2, Fax3, Fax4,

NOTE

- The serial number of a PH unit can only be displayed but not be changed.

### 5.15.4 Sleep ON/OFF Choice Setting

(1) Use

- To display the option of "No" for the sleep mode setting screen available from [Administrator Settings] -> [System Settings] -> [Power Supply/Power Save Settings]
- The sleep mode will begin in 48 hours even if it sets it to "OFF."
(2) Default setting
- Prohibit
(3) Setting item
- Permit

### 5.15.5 Foolscap Size Setting

(1) Use

- To set the size for foolscap paper.
- Upon setup.
(2) Procedure
- Select the size from among the following six.
(3) Default setting
- $8 \times 13$
(4) Functions
- $8 \frac{1}{2} \times 13^{1} / 2$
- $220 \times 330 \mathrm{~mm}$
- $8 \frac{1}{2} \times 13$
- $8 \frac{1}{4} \times 13$
- $8 \frac{1}{8} \times 13^{1 / 4}$
- $8 \times 13$

NOTE

- " $81 / 8 \times 13^{1} / 4$ " and " $220 \times 330 \mathrm{~mm}$ " setting are corresponding to paper fed from the manual bypass tray only.

### 5.15.6 Original Size Detection

(1) Copy Glass
(a) Use

- To change the size detection table for the document glass.
(b) Default setting
- Table1
(c) Setting item
- Table1
- Table2

NOTE

- Table 2 can be set only when original size sensor 2 is being mounted. (For destinations other than Japan)
- On models for Japan, original size sensor 2 is not required, but Table 2 can be set.
(2) 8-1/2 $\times 14 /$ Foolscap Size Detection
(a) Use
- To set whether paper of $8 \frac{1}{2} \times 13 \frac{1}{2}$ size is detected as $8 \frac{1}{2} \times 14$ or foolscap in original glass or DF size detection.

When Table 1 is selected in Copy Glass, paper of $81 / 2 \times 131 / 2$ size is detected as Foolscap despite of the setting of $81 / 2 \times 14 / \mathrm{Foolscap}$ Size Detection.

- Not available for Japan models.
(b) Default setting
- $8 \frac{1}{2} \times 14$
(c) Functions
- $8 \frac{1}{2} \times 14$
- Foolscap
(3) ADF Size Detection
(a) Use
- To set whether or not to give a priority to the detection of $8 \mathrm{~K} / 16 \mathrm{~K}$ size when DF is used.
- Not available for Japan models.
(b) Default setting
- K Size
(c) Functions
- K Size
- B series

### 5.15.7 Install Date

(1) Use

- To register the date the main body was installed.
- Upon setup.

## NOTE

- When using without setting the install date, the date/month/year at which the total counter reaches more than 100 sheets of paper will be set as an install date automatically.

## (2) Procedure

1. Call the Service Mode to the screen
2. Touch [System 1] -> [Install Date].
3. Touch Clear
4. Enter the date from the 10-key pad. (Year 4 digit -> Month 2 digit -> date 2 digit)
5. Touch [Entry] to set the date of installation.

### 5.15.8 Initialization-Clear All Data

(1) Use

- To initialize the setting data.
- For details on items to be cleared, see " I. 10 CONTENTS TO BE CLEARED BY RESET FUNCTION."

## NOTE

- When removing or installing the hard disk after registering the data below, be sure to clear the data. Referring data: One-touch registration, user authentication/account track.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 1] -> [Initialization] -> [Clear All Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after. NOTE

- The trouble code "CD272: i-Option activated and additional memory and HDD not installed" is displayed after turned on the main power switch

5. Call the Service Mode to the screen.
6. Touch [System 2] -> [HDD] -> [Installed].
7. Exit the Service Mode and then turn off the main power switch and turn it on again more than 10 seconds after.

### 5.15.9 Initialization-Clear Individual Data

- Clear Individual Data enables you to select and clear multiple items at a time.

## (1) Copy Program Data

(a) Use

- To clear data registered as copy program
- Use this feature to clear all copy program data at a time.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 1] -> [Initialization] -> [Copy Program Data].
3. Press the Start key.
4. When $[\mathrm{OK}]$ is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

## (2) Address Registration Data

(a) Use

- To clear address registration data.
- Use this feature to initialize address registration data.
- The following are address registration data:

Group address data, Program key data, One-touch destination data, Mail body data, Subject data, Prefix/suffix data

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 1] -> [Initialization] -> [Address Registration Data].
3. Press the Start key.
4. When $[\mathrm{OK}]$ is displayed, turn off the main power switch and turn it on again more than 10 seconds after

## (3) Fax Setting Data

(a) Use

- To clear fax-related settings and parameters.

However, address-related data is not cleared

- Use this feature to clear fax-related settings and parameters at a time.
(b) Procedure
. Call the Service Mode to the screen.
. Touch [System 1] -> [Initialization] -> [Fax Setting Data].
. Press the Start key.

4. When $[\mathrm{OK}]$ is displayed, turn off the main power switch and turn it on again more than 10 seconds after
(4) All History Data
(a) Use

- To clear history data.
- The following are history data: Job history, Journal history, Receive reject history, Destination history, Job secure counter (Internal data for history management)
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 1] -> [Initialization] $->$ [All History Data]
3. Press the Start key.
4. When $[\mathrm{OK}]$ is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

## (5) Network Setting Data

(a) Use

- To clear the network-related settings.
- Use this feature to initialize and set network-related settings again when the machine does not work properly upon change of networkrelated settings.

## (b) Procedure

. Call the Service Mode to the screen.
. Touch [System 1] -> [Initialization] -> [Network Setting Data].
. Press the Start key.
4. When $[\mathrm{OK}]$ is displayed, turn off the main power switch and turn it on again more than 10 seconds after

## (6) Server Cache Data

(a) Use

- To clear user information cached from the external authentication server.
- When [Administrator Settings] -> [User Authentication/Account Track] -> [External Server Settings] -> [Temporarily Save Authentication Info.] is set to "Enable," the corresponding user information is cached each time when authentication by the external server is successful. The information is used when MFP cannot be connected to the external server.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 1] -> [Initialization] -> [Server Cache Data].
3. Press the Start key.
4. When $[\mathrm{OK}]$ is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

### 5.15.10 Initialization-System Error Clear

(1) Use

- To reset the trouble data.
- Use to clear the [Jam], [Trouble], [Error] displays, and other improper displays.
- For details on items to be cleared, see " I.10 CONTENTS TO BE CLEARED BY RESET FUNCTION."

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 1] -> [Initialization] -> [System Error Clear].
3. Press the Start key.
4. When $[\mathrm{OK}]$ is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

### 5.15.11 Problem Unit Isolation Set.

(1) Use

- Individual units and options have a set or unset setting for the problem unit isolation set. function.
- When a problem occurs, this function enables the continuous use of the units that are not affected by separately controlling them and isolating other units that have a problem.
- The machine isolates only units that have a "set" setting.

NOTE

- The malfunction detection mechanism is not applied to units and options that are being isolated.
- This function can be selected for the following units and options.
- Tray 1, Tray 2, Tray 3, Tray 4, manual, Half-Fold/Tri-Fold Center Stapling, Scanner, ADF, Expansion Function (HDD)
- Though Problem Unit Isolation Set. is not selected, if the specified malfunctions occur on the above listed units or options, an alert screen appears and asks users whether to isolate the units or options where malfunction occurs. See the "List of the trouble code" section for the corresponding trouble codes.

## (2) Default setting

- Unset

## (3) Setting item

- Set
- Unset

## NOTE

- After changing the setting, touch [Apply] and turn the main power switch OFF and ON to make the new setting effective.

### 5.15.12 Post card transfer table

(1) Use

- For the use of thick 3 postcards, you can select the transfer table suitable for postcards.
- This setting is used to improve transfer performance to postcards.

| Post. | The postcard image transfer table is used when printing on thick3 postcards. |
| :--- | :--- |
| Thick 3 | The normal thick3 image transfer table is used when printing on thick 3 postcards. |

## (2) Default setting

- Post.

## (3) Setting item

- Post.
- Thick 3

### 5.15.13 Warm-up

## (1) Change Warm Up Time

(a) Use

- To change warm up completion time.
- Mode is changed to Mode 2 in case the paper gets curled significantly when black printing is conducted immediately after warm up at Mode 1.
- Mode is changed to Mode 3 or 4 in case the paper gets curled immediately after normal warm up or the curled paper causes paper jam, paper exit failure, punch/staple/fold position failure or etc.
(b) Default setting
- Mode 1
(c) Setting item
- Mode 1
- Mode 2
- Mode 3
- Mode 4

| Mode 1 | It makes the warm-up time for black print shortest. |
| :--- | :--- |
| Mode 2 | The warm-up time for both black and color will be as specified value. |
| Mode 3 | To prevent curling of the paper immediately after the warm-up, printing productivity is decreased by PPM <br> control. <br> The warm-up time will be as specified for both black and color. |
| Mode 4 | By having a longer warm-up time and warming up the fusing unit, curling of the paper immediately after the <br> warm-up can be prevented. <br> The warm-up period of time will be 65 seconds or under. |

## (d) Fusing operation mode

- Warm-up related control can be changed by using [Warm Up] setting and [Choice of high humidity circumstance] setting. When the main power switch is turned on, the mode is defined according to each choice setting.
- The following table shows the features of each operation mode.

| Operation mode | Service Mode |  | Target user | Target user | Disadvantages |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Warm-up | Choice of high humidity circumstance |  |  |  |
| $\begin{aligned} & 1 \\ & \text { (Initial setting) } \end{aligned}$ | Mode 1 | OFF | - Black usage rate is high <br> - Want to print quickly | Makes warm-up time for black shortest | Curling may occur in high humidity |
| 2 |  | ON | - Black usage rate is high <br> - Want to prevent curling | - Warm-up time for black is made shortest except when in high humidity <br> - Decreases possibility curling occurs in high humidity | Warm-up time is long in high humidity ( 65 seconds or later) |
| 3 | Mode 2 | OFF | - Want to print quickly <br> - Color usage rate is high | - Warm-up time is as specified value or later <br> - High productivity even in high humidity | Curling may occur in high humidity |
| 4 |  | ON | - Color usage rate is high <br> - Want to prevent curling | - Warm-up time is as specified value or later except in high humidity <br> - Decreases possibility curling occurs in high humidity | Warm-up time is long in high humidity (65 seconds or later) |
| 5 | Mode 3 | OFF | - Want to print quickly | - Warm-up time is as specified value or later | - Productivity immediately after warm-up decreases |

| Operation mode | Service Mode |  | Target user | Target user | Disadvantages |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Warm-up | Choice of high humidity circumstance |  |  |  |
|  |  |  | - Want to prevent curling immediately after warmup | - Decreases the curling in normal circumstance | - Curling may occur in high humidity |
| 6 |  | ON | - Want to prevent curling immediately after warmup <br> - Want to print quickly <br> - Want to prevent curling when humidity is high | - Warm-up time is as specified value or later <br> - Decreases possibility curling occurs | - Productivity immediately after warm-up decreases <br> - Warm-up time is long in high humidity ( 65 seconds or later) |
| 7 | Mode 4 | OFF | Want to prevent curling immediately after warm-up | Decreases possibility curling occurs | Long warm-up time ( 65 sec . or less) |
|  |  | ON |  |  |  |

(2) Low Power Consumption Mode
(a) Use

- To set whether to give priority to either the warm-up time or productivity when some optional devices are installed and the machine cannot secure enough electric power supply.
NOTE
- This setting is available only for Japan.
- Only for bizhub C558.
(b) Default setting
- Warm Up Priority
(c) Setting item
- Warm Up Priority
- Productivity Priority

### 5.15.14 Machine State LED Setting

(1) Use

- To set how to display main body statuses on the machine state LED (state display lamp, paper empty lamp). NOTE
- Each of Type1 and Type2 has the following LED display forms.

| Machine State LED Setting |  | Type1 | Type2 |
| :---: | :---: | :---: | :---: |
| Warning Status | Attention <br> - Toner supply door open <br> - Toner cartridge install failure <br> - Toner Empty | Blinking | Blinking |
|  | - Near life <br> - Toner Near Empty | Lit | Lit |
|  | Malfunction code | Blinking | Blinking |
|  | Problem Unit Isolation | Blinking | Blinking |
|  | Fatal error <br> - Trouble code <br> - Jam <br> - Door opened <br> - Life stop <br> - Toner Empty Stop | Lit | Lit |
| Paper Remainder (Tray 1/2 paper empty lamp) | 100 \% to near empty | Unlit | Unlit |
|  | Near empty | Blinking | Unlit |
|  | Empty | Lit | Lit |
|  | Being lifted up Cassette Open | Unlit | Unlit |
| Paper Remainder (Tray 3/4 paper empty lamp) | 100 \% to near empty | Unlit | Unlit |
|  | Near empty | Blinking | Unlit |
|  | Empty | Lit | Lit |
|  | Being lifted up Cassette Open | Unlit | Unlit |

## (2) Default setting

- Type 2
(3) Setting item
- Type 1
- Type2

### 5.15.15 TP Level

(1) Use

- To adjust the selectivity of the touch panel.
(2) Default setting
- 0
(3) Setting range
- -2 to +2 (step: $1^{*}$ )
- To increase sensitivity of the touch panel, increase the setting value.
- To decrease sensitivity of the touch panel, decrease the setting value.

NOTE

- When the setting has been changed, turn off the main power switch and turn it on again more than 10 seconds after.

### 5.15.16 Burn Prevention Settings

(1) Use

- To prompt to prevent a burn injury by displaying a message indicating that the fusing unit is at a high temperature when the right door has to be opened in order to get rid of a paper jam.
(2) Default setting
- Enable
(3) Setting item
- Enable
- Disable

### 5.16 System 2

### 5.16.1 HDD

- Setting change is unnecessary. (Select [Installed] at any time.)

NOTE

- For putting the following order [System 1] -> [initialization] into practice, the set becomes [Not Installed], causing an error. Required to set [Installed] again.

### 5.16.2 Image Controller Setting

(1) Image Controller Setting
(a) Use

- To set the type of the controller.
- When setting up the controller.
(b) Procedure
- Select the controller to be used.
(c) Default setting
- Controller 0
(d) Functions
- Controller 0: The standard controller is used.
- Controller 1: Optional image controller IC-416 is used.
- Others: undefined.

NOTE

- When [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is "ON", this setting should be set to "Controller 0". When [Enhanced Security Mode] is set to "ON", this setting cannot be changed.
- After changing setting, make sure to turn off the main power switch and turn it on again more than 10 seconds after.
(e) Note on returning the setting from "Controller 1" to "Controller 0".
- Selecting "Controller 0" will initialize the following settings made while "Controller 1 " was selected. Reset the following items as necessary when using the internal standard controller.
<Control panel on the machine>
- Setting items included in [Network Setting] available from [Administrator Setting]. (Except [Status Notification Setting] and [Prefix/Suffix Setting] available from the following setting. [Administrator Settings] -> [Network Settings] -> [Detail Settings].)
- [Administrator Settings] -> [User Authentication /Account Track] -> [General Settings] -> [User Authentication] -> [External Server Authentication]
- [Administrator Settings] -> [System Connection] -> [OpenAPI Settings]
- Mailbox Destination (scan)
- Information on the original specified by the program destination
<Page Scope Web Connection>
- SSL/TLS

## (2) Peripheral Mode

(a) Procedure

- Select the operating mode of the Scanner.

NOTE

- After changing setting, make sure to turn off the main power switch and turn it on again more than 10 seconds after.
(b) Functions
- Mode 1: undefined
- Mode 2: undefined.
- Mode 3: undefined.

### 5.16.3 Option Board Status

(1) Use

- To be used for setup of the optional fax kit (FK-514*1, FK-515*2) or the security kit (SC-508). NOTE
- *1: FK-514 is used for FAX line $1 /$ line 2.
- *2: FK-515 is used for FAX line 3/line 4. The Fax Mount kit (MK-742) is required when line $3 / 4$ is installed.
(2) Default setting
- Unset
(3) Setting item

FAX (circuit 1)

- Set
- Unset

FAX (circuit 2)

- Set
- Unset

FAX (circuit 3)

- Set
- Unset

FAX (circuit 4)

- Set
- Unset

DSC1

- Set
- Unset

DSC2

- Set
- Unset

NOTE

- When the setting has been changed, turn off the main power switch and turn it on again more than 10 seconds after.

### 5.16.4 Consumable Life Reminder

(1) Use

- To select whether or not to give the display of PM parts lifetime

| PM parts lifetime display | An entire screen warning is given when the service life of a specific unit has been reached, |
| :--- | :--- | prompting the user to replace the part.

- Applicable units:

Transfer belt unit, fusing unit, developing unit, drum unit, transfer roller unit

- Use to select not to give the display of PM parts lifetime.

| Yes | When the service life has been reached, a malfunction code and an entire screen warning appear on the control <br> panel. |
| :--- | :--- |
| No | When the service life has been reached, a malfunction code and a message appear in one line on the upper <br> side of the screen. |

## (2) Default setting

- No
(3) Setting item
- Yes
- No

### 5.16.5 Unit Change

(1) Unit Change
(a) Use

- To select who is to replace a unit.
- When the unit life arrives, the warning display is intended for the specific person who is going to replace the unit.
- When "User" is selected: Printing is inhibited.
- When "Service" is selected: Life warning.
- Upon setup.
(b) Default setting

| Units | Japan | US | Europe |
| :--- | :---: | :---: | :---: |
| Toner cartridge | User | User | User |
| Drum unit | Service | Service | Service |
| Waste toner box | Service | User | User |
| Hole-Punch Scrape Box | User | User | User |

## (c) Setting item

- User
- Service

## (2) Warning display - Toner Near Empty

(a) Use

- To set whether to display a toner near empty warning.
- To be used for setup.
(b) Default setting
- Yes
(c) Setting item
- Yes
- No

## (3) Warning display - Near Empty Display Time <br> NOTE

" The Near Empty Display time will be displayed when "Bit Assignment 00000010 / HEX Assignment 02 " is set for the Switch No. "151" through the following settings. [SERVICE MODE] -> [System 2] -> [Software Switch Setting].

- A mechanism for detecting the residual toner inside the toner cartridge is not provided to the toner cartridge. So note that when the toner cartridge is replaced in the midway, the display timing that was set as a reference and the amount of the residual toner inside the toner cartridge may get mismatched.
(a) Use
- To change the timing of toner cartridge near empty detection in order to optimize the timing of the toner cartridge replacement depending on individual use (PV).
- To configure the setting for both toner cartridge/K and toner cartridge/C,M,Y.
- To specify the timing for displaying toner near empty warning at a percentage against $100 \%$ of a full toner cartridge state.
(b) Default setting

|  | C658 | C558 | C458 | C368/C308/C258 |
| :--- | :---: | :---: | :---: | :---: |
| CMY | 8 | 4 | 2 | 0 |
| K | 18 | 11 | 8 | 7 |

## (c) Setting range

- 0 to +25 (steps: 1 )

## (4) Warning display - DU PreNear Life Display Time

(a) Use

- Specifies when to display the near life for the drum unit.
- Specifies whether to display the archive at a set number of months before the estimated the consumables check list life cycle is reached.
- When [0] is specified, the near life is not displayed.
(b) Default setting
- 0
(c) Setting range
- 0 to +6 (steps: 1)
(5) Warning display - Near Life Display Settings
(a) Use
- To set whether or not to display the life warning of individual consumables.
- When [Do Not Display] is selected, a warning is not displayed at the time of life detection. However, in CS Remote Care, life warning is always sent to the Center regardless of this setting.
- Applicable consumables are as follows:

Drum Unit, Developing Unit, Fusing Unit, Transfer Roller Unit, Image Transfer Belt Unit, Toner Filter
NOTE

- The settings of software Dip switch No. 227 (bit7) and switch No. 230 (bit3) have priority.
(b) Default setting
- Display
(c) Setting item
- Display
- Do Not Display
(6) Warning display - Pre-Near Life Display Setting
(a) Use
- To set whether or not to display the near life warning of drum unit.
- When [Do Not Display] is selected, a warning is not displayed at the time of near life detection. However, in CS Remote Care, near life warning is always sent to the Center regardless of this setting.
NOTE
- When the PreNear Life Display setting is specified to [Off], the near life warning display is disabled.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
5.16.6 Software Switch Setting

(1) Use
- To set the operating characteristic of each function from software switch depending on what types of printing are normally made.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 2] > [Software Switch Setting].
3. Touch [Switch No.] and enter the intended switch number with the 10-key pad.
4. Touch [Bit Assignment].
5. Use [<-] or [->] to select a bit. To set the bit, enter 0 or 1 with the 10 -key pad.
6. To set the bit in hex, touch [HEX Assignment] and use the 16key pad and $[A]$ to $[F]$ keys to enter numbers and characters.
7. Touch [Fix].

## (3) Details of the software switch settings

## NOTE

- For switches not mentioned in the list below, use them in the default value (Bit Assignment: 00000000 / HEX Assignment: 00) unless indicated otherwise.

| Switch No. | Function | Setting value |  |  | Default value (Bit/HEX) | Reference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Bit <br> Assignment | HEX <br> Assignment | Details |  |  |
| 012 | Addition of the authentication device | 00000000 | 00 | Standard | 00000000 / 00 | - Authentication Device 2 |
|  |  | 00000010 | 02 | PKI correspondence (NIPRNet) <br> [Card3] choice is added in Service Mode. |  |  |
|  |  |  |  | PKI correspondence (SIPRNet) <br> [Card3] choice is added in Service Mode. |  |  |
| 025 | FW function version setting | 00000000 | 00 | FW compatible with version 1.0 | 00000000 / 00 | - Device Information List |
|  |  | 00010000 | 10 | FW compatible with version 2.0 |  |  |
|  |  | 00100000 | 20 | FW compatible with version 2.1 |  |  |

| 063 | 00000000 | 00 | 127 | 00000000 | 00 | 191 | 00000000 | 00 | 255 | 00000000 | 00 |  |  |  |

### 5.16.7 CCD Calibration

(1) Use

- To set whether to use the calibration adjustment value set prior to the shipping. To display the current calibration adjustment value.
- When CCD board (front side)/CIS (back side: only when dual scan document feeder is mounted) has been replaced, set to "OFF." After replacing the CCD board or CIS, the default generic value needs to be set since the calibration value set for each unit changes to control the differences in reading performance on each scanner (CCD).
- The original calibration adjustment value can be disabled to address image failure and other problems caused by individual CCD performance difference.
- When dual scan document feeder is mounted, this setting can be made separately for [Front Side] and [Back Side].
(2) Default setting
- ON
(3) Setting item
- ON
- OFF

NOTE

- When the setting is changed, the function becomes available by turning the main power switch OFF and ON again.

### 5.16.8 LCT (Built-in) Size Settings

(1) Use

- To set the paper size for the built-in LCT.
- To use when optional paper feed cabinet PC-410 (bizhub C368/C308/C258) or PC-415 (bizhub C658/C558/C458) is mounted.
(2) Default setting
- A4 (Except for North America)
- $8 \frac{1}{2} \times 11$ (North America)
(3) Setting item
- A 4
- $8 \frac{1}{2} \times 11$

### 5.16.9 LCT Paper Size Setting

(1) Use

- To set an optional large capacity unit type (LU-302 or LU-207).
- To set the paper size for the optional large capacity unit LU-302 or LU-207.
- Use this feature upon the optional large capacity unit LU-302 or LU-207 set-up.
(2) Default setting
- A4LCT
(3) Setting item
- A4LCT
- A3LCT
* For a selected LCT type, set a paper size.

## NOTE

- When the LCT type setting is changed, the paper size setting in the LCT is returned to the default.
(4) A4LCT
(a) Default setting
- A4 (Except for North America)
- $8 \frac{1}{2} \times 11$ (North America)
(b) Setting item
- A4
- $8 \frac{1}{2} \times 11$
(5) A3LCT
(a) Default setting
- A3 (Except for North America)
- $11 \times 17$ (North America)
(b) Setting item
- SRA3
- A3
- B4
- A4S
- A4
- $12 \times 18$
- $11 \times 17$
- $8 \frac{1}{2} \times 14$
- $8 \frac{1}{2} \times 11$
- $8 \frac{1}{2} \times 11 \mathrm{~S}$

### 5.16.10 Paper Reuse Box Setting

(1) Use

- This setting is to be configured when the optional Paper Reuse Box is used.
- Select the paper loading port (tray 1/tray 2 ) where a paper reuse box is installed.
(2) Default setting
- Do Not Use
(3) Setting item

1. Do Not Use
2. Tray 1
3. Tray 2

### 5.16.11 Line Mag Setting

(1) Use

- To set whether to use the offset value which has been set prior to the shipping. To display the current magnification offset value.
- When CCD board (front side)/CIS (back side: only when dual scan document feeder is mounted) has been replaced, set to "OFF." After replacing the CCD board or CIS, the default generic value needs to be set since the magnification offset value between the lines set for each unit changes to control the differences in reading performance on each scanner (CCD).
- The original offset value can be disabled to address image failure and other problems caused by individual CCD performance difference.
- When dual scan document feeder is mounted, this setting can be made separately for [Front Side] and [Back Side].
(2) Default setting
- ON
(3) Setting item
- ON
- OFF

NOTE

- When the setting is changed, the function becomes valid by turning the main power switch OFF and ON again.

### 5.16.12 Data Capture

(1) Use

- When an error occurs, it acquires the print job data in order to analyze the cause of the error.
- When an error occurs, this will be used to analyze the cause of the error according to the print job data.

## (2) Procedure

## NOTE

The following conditions are necessary for this function.

- [Allow] must be set when selecting [Administrator Settings] [Security Setting] -> [Security Details] -> [Print Data Capture].
- The hard disk must be mounted to the machine.
- [ON] must be set when selecting [Administrator Settings] -> [Network Settings] -> [FTP Settings] -> [FTP Server Settings].
- This function also allows print job data stored in the HDD to be obtained from [Debug Settings] -> [Debug Log Output].

1. Select [Service Mode] -> [System 2], and touch [Data Capture]. Select [ON].
(While the Data Capture setting is [ON], the print job data from the PC will be stored in the hard disk.)
NOTE

- Maximum 5 print job data can be stored. The data will be overwritten beginning with the chronologically oldest one.

2. Check the IP address of the machine.
3. Connect the PC (Windows) and the machine with ethernet cable.
4. Start the DOS command prompt of the PC, and specify the IP address of the machine to start FTP.

5. Input the user name and the password.

- User name: capture
- Password: sysadm

6. Using the "Is" command, display the list of the file available for capture.

7. Using the "binary" command, set the File transfer mode to the binary transfer.

8. Using the "get" command, transfer the data for capture to PC.

9. Finish the command prompt.

NOTE

- After receiving capture data, select [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Print Data Capture], and select [Restrict] for the print data capture setting in order to delete the job data stored in the hard disk. When HDD Format or Overwrite Temporary Data is performed, job data is deleted.

### 5.16.13 ADF Scan Glass Contamin. Set.

## (1) ADF Scan Glass Contamin. Sensitivity

- To make each settings for contamination detection.
- When a dual scan document feeder is mounted, make the settings separately for the front side and the back side.
(a) Use
- To set the detection level for the pre-detection of stain on the DF original glass (or the CIS glass). In the back side pre-detection, stains of not only the CIS glass but also the back side glass cleaning roller are detected.
- Use when changing the setting for whether or not to detect the stain on the DF original glass when opening/closing DF as well as its detection level as the main power switch being ON, recovering from the sleep/low power mode, etc.

| Not Set | Detection of stain on the glass will not be conducted. |
| :--- | :--- |
| Low | Stain on the glass will not be detected easily. |
| Normal | Normal detection level |
| High | Stain on the glass will easily be detected. |

## NOTE

" Be aware that selecting "Not Set" and performing the pre-detection with [Service Mode] -> [Machine] -> [ADF Scan Glass Contamination] will display "NG."
" When "Not Set" is selected, the original glass cleaning operation after the job ends does not operate.
(b) Default setting

- Normal
(c) Setting item
- Not Set
- Low
- Normal
- High

## (2) ADF Scan Glass Contamin. Warn/Level

(a) Use

- To set how to display the warning when stain on the DF original glass (or the CIS glass) is detected.
- Use when changing the display of the warning which requests the cleaning of the stain on the glass detected by the pre-detection of the lines.

| 0 | Warning will not be displayed. |
| :--- | :--- |
| 1 | Warning will be displayed by the maintenance mark. (Malfunction code: D-1/D-3) |
| 2 | Warning will be displayed on the message area on the basic screen. |
| 3 | Warning will be displayed on all screens. |

NOTE

- This setting is invalid when [ADF Scan Glass Contamin. Sensitivity] is set to "Not Set."
(b) Default setting
- 1
(c) Setting item
- 0
- 1
- 2
- 3

## (3) Feed Cleaning Settings

(a) Use

- To set the operation for detection and cleaning operation of stain on the DF original glass when feeding the original.
- Use when changing the operation for detection and cleaning operation of stain on the DF original glass when feeding the original.

| 0 | The cleaning brush will stop moving when the original is fed, and will not perform cleaning the <br> stain. |
| :--- | :--- |
| 1 | The cleaning brush will move between originals when feeding the original. |

## (b) Default setting

- 1
(c) Setting item
- 0
- 1
(4) Display Timing (only when dual scan document feeder is mounted)
(a) Use
- To set the timing at which a warning is displayed when contamination is detected on the surface of the CIS glass in a pre-detection process.

| Back Scan Time | Displays the warning only when back side scanning mode is selected. |
| :--- | :--- |
| Warning Detection | Displays the warning whenever contamination is detected. |

- This setting is enabled only when [Back Side] is selected.
(b) Default setting
- During the Back Side Scan
(c) Functions
- Warning Detection
- During the Back Side Scan

### 5.16.14 Stamp

(1) Use

- To set the mounting status of the optional stamp unit SP-501.
- To use when setting up the stamp unit SP-501.
(2) Default setting
- Unset
(3) Setting item
- Set
- Unset

### 5.16.15 Network Fax Settings

(1) Use

- To set whether or not to use network fax function.
- To use network fax function (IP address fax, internet fax).
- Selection will be available when each network fax function is set to "ON" in [Administrator Settings] -> [Network Settings] -> [Network Fax Settings] -> [Network Fax Function Settings].
(2) Default setting
- OfF
(3) Setting item

IP Address Fax

- ON
- OFF

Internet Fax

- ON
- OFF

### 5.16.16 RX File Change Page Name

(1) Use

- To set whether to change the document file name to forward TX or take out a file from the Memory RX Box.
(2) Default setting
- Do Not Change
(3) Setting item
- Change
- Do Not Change

### 5.16.17 ADF Settings

(1) Use

- To configure ADF installation settings.

NOTE

- It is not used on bizhub C658/C558/C458.
(2) Default setting
- Unset
(3) Setting item
- Unset
- Single-Sided Scan Tx
- Dual Scan Document Feeder

### 5.16.18 Image Stabilization Setting

(1) Use

- To change the type and timing of image stabilization.
- To provide the desirable image stabilization control that depends on customer's machine usage pattern, i.e. the ratio of color to black print.

| Standard | This mode is suitable for low-volume users and reduces <br> the number of times image stabilization is carried out <br> when the main power switch is turned ON. | lf the change of absolute humidity is detected during <br> warm-up, normal stabilization is performed during <br> warm-up. |
| :--- | :--- | :--- |
| Color Priority | This mode is suitable for high-volume and high ratio of <br> color print users. | Color stabilization sequence is performed <br> unconditionally when the main power switch is turned <br> ON. |

| Black Priority | This mode is suitable for users who use mainly black <br> print and use less color print. It provides monochrome <br> stabilization and reduces the number of times image <br> stabilization is carried out when the main power switch <br> is turned ON. | If the change of absolute humidity is detected during <br> warm-up, monochrome stabilization is performed during <br> the warm-up and color stabilization is performed before <br> color printing. |
| :--- | :--- | :--- |

## (2) Default setting

- Standard
(3) Functions
- Standard
- Color Priority
- Black Priority

### 5.16.19 Multifeed Sensor Status (bizhub C658/C558/C458)

(1) Use

- To set the mounting status of the optional Double feed detection Kit UK-501.
- To use when setting up the Double feed detection Kit UK-501.

## (2) Default setting

- UnSet
(3) Setting item
- Set
- UnSet

### 5.16.20 User Paper Settings

(1) Use

- To set and register individual user paper that includes a different basic weight, fusing temperature, 2nd image transfer fine adjustment value.
- User Paper Settings is also available from [Administrator Settings] -> [System Settings] -> [Expert Adjustment] -> [User Paper Settings].
- To register a paper type that is suitable for individual customer's intended use and use environment.
- The following shows user paper registration keys and corresponding paper types.

| User Paper 1/2 | Plain paper |
| :--- | :--- |
| User Paper 3 | Thick 1 |
| User Paper 4 | Thick paper 1+ |
| User Paper 5 | Thick 2 |
| User Paper 6 | Thick 3 |

## (2) Procedure

1. Call the Service Mode to the screen
2. Touch [System 2] -> [ $\quad$ ] -> [User Paper Settings].
3. Select the desired key from [User Paper 1] to [User Paper 6] to register user paper.
4. Select [Basic Weight] and enter a value with the [+] / [-] key.
5. Select [600dpi] or [1200dpi] and enter a fusing temperature with the [+] / [-] key.

The setting range is $-20^{\circ} \mathrm{C}$ to $+10^{\circ} \mathrm{C}$. $\left(1\right.$ step: $\left.5^{\circ} \mathrm{C}\right)$
NOTE

- [1200dpi] is only displayed on bizhub C658/C558/C458.

6. Select a target item of the [2nd Transfer Adj.], and enter a 2nd image transfer fine adjustment value with the [+]/ [-] key. (Only [Front]/ [Back] can be selected for User Paper 5 and User Paper 6.)
The setting rage is -8 to +7 . (1 step: 1 increment or decrement)
7. Load the manual bypass tray with paper.

Paper Size: A4S, B4S, A3S, 81/2×14S, 81/2×11S, 11×17S
8. Select [1Side] (only front side) or [Front side] (only back side) and press the Start key.
9. Check the image of the output test pattern.

If the image is not acceptable, adjust the settings and output the test pattern again.

## (a) Test Pattern in User Paper Settings

- The printable test pattern for user paper settings is provided to ease determining the most appropriate 2nd image transfer output value when customizing user paper.
- The test pattern outputs a pattern for Standard value A (2nd image transfer output control) according to the 2nd image transfer fine adjustment setting range. (Every two steps)
- Refer to the printed pattern, and select the 2nd image transfer fine adjustment setting.

## A: Standard voltage

### 5.16.21 Coverage Rate Screen

(1) Use

- To set whether or not to display a coverage rate on the sales counter screen and sales counter list.
- Coverage Counter instead of Coverage Rate is displayed when Switch No. 206 is set to [00000001] at Bit assignment/[01] at HEX assignment in [Service Mode] -> [System 2] -> [Software Switch Setting].
(2) Default setting
- Do Not Display
(3) Setting item
- Display
- Do Not Display

### 5.16.22 JAM Code Display Setting

(1) Use

- To set whether or not to add a jam code to a jam warning display on the control panel when a jam occurs.
(2) Default setting
- Do Not Display
(3) Setting item
- Do Not Display
- Display

### 5.16.23 Purge Setting (bizhub C658/C558/C458)

(1) Use

- When a finisher equipped with a horizontal transport unit is mounted, set whether to use the reverse roller to discharge paper remained in the machine when a paper jam occurs in the transport path downstream from the exit port (inside the finisher equipped with the horizontal transport unit).
- When "Yes" is selected, paper remained in the machine when a paper jam occurs will be discharged into the horizontal transport unit.
(2) Default setting
- Yes
(3) Setting item
- Yes
- No

### 5.16.24 Import Config. Data

(1) BootUp Screen

NOTE
In the following conditions, import of BootUp Screen data is prohibited.

- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory (Service)] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to [ON].
(a) Use
- To customize the BootUp Screen displayed upon machine start-up.
- Use this feature when changing the KonicaMinolta logo displayed on the control panel upon start-up to a client company logo or others for client's intended use of the machine.
- Logo data can be registered to the eMMC board from USB memory.
- The following are the logo data specifications that should be met.

| Image format | PNG format |
| :--- | :--- |

| File extension | ".bin" or ".zip" |  |
| :--- | :--- | :--- |
| FileName | BootUpScreen*.bin or BootUpScreen*.zip (* represents user-defined text) |  |
| Image size | bizhub C368/C308/C258 | $800 \times 480$ dots |
|  | bizhub C658/C558/C458 | $1024 \times 600$ dots |
| Color | 256 colors (Palette that the machine specifies is used.) |  |

NOTE

- When making the logo data, use the exclusive image making tool.
" If a USB memory is not connected or a nonconforming USB memory is connected, "USB NG" is displayed and logo data cannot be registered.
- If the file name of logo data does not conform to the above specifications, "File NG" message is displayed and logo data cannot be registered.
- To install logo data as a zip format file, compress the bin file of the same name (image data) and the Version.txt file (version information) in one zip file.
- Version information will be displayed as the version of BootUp Screen, when Version.txt is installed with the version information described in the Version.txt file and compressed with image data in one zip file. Usable character type is limited to ASCII (7-bit ASCII). Text strings of up to 21 characters can be used.

## (b) Procedure

1. Save logo data that conforms to the above specifications in the root directory of a USB memory device. NOTE

- Be sure to save data in the root directory as the machine cannot detect data saved in other directories.

2. Connect the USB memory device to the machine USB port.
3. Touch [System 2] -> [D] -> [Import Config. Data] -> [BootUp Screen].
4. Touch [Set].
5. Check result "OK" is displayed and touch [END].

## NOTE

- If logo data is already registered, new logo data overwrites the existing logo data.
- The color of logo data may look different between the machine control panel and some PC screens. After registering logo data, restart the machine and check the color of the logo data on the BootUp screen.
* To delete registered data, touch [Delete] and check result "OK" is displayed.
(2) Machine Image

NOTE
In the following conditions, import of machine image data is prohibited.

- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory(Service)] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to [ON].
(a) Use
- To customize the exterior view of the machine displayed on the control panel.
- Use this function to change the exterior view of the machine displayed on the control panel to the exterior view of the customer business office according to the user's need.
- The exterior view data can be registered to the eMMC board from USB memory.
- Check the version of the installed exterior view data. (When the USB memory is not connected)

## (b) Procedure

1. Save the exterior view data in the root directory of the USB memory. NOTE

- Be careful that the MFP is unable to recognize data saved in any directories other than the root directory.

2. Connect the USB memory to the USB port of the machine.
3. Touch [System 2] -> [ - ] -> [Import Config. Data] -> [Machine Image].
4. Touch [Set].
5. Check result "OK" is displayed.
6. Turn OFF and ON the main power switch.

NOTE

- Any exterior view data that has previously been registered will be overwritten by subsequent new data as it is registered. - To delete registered data, touch [Delete] and make sure that "OK" appears.
(3) Custom Auth. Setting

NOTE
Only when one of the following conditions is met, the authentication customize data can be imported.

- A USB memory is inserted in the USB port.
- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory (Service)] -> [Storage data backup] is set to [Allow].
- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory (Service)] -> [FW Update] is set to [Allow].
- [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to [OFF].
(a) Use
- To install the authentication customize data used to customize the authentication process.
(b) Procedure

1. Save the authentication customize data to the root directory of a USB memory. NOTE

- Be careful that the MFP is unable to recognize data saved in any directories other than the root directory.

2. Connect the USB memory to the USB port of the machine.
3. Touch [System 2] -> [ $\square$ ] -> [Import Config. Data] -> [Custom Auth. Setting].
4. Touch [Set].
5. Check result "OK" is displayed.
6. Turn OFF and ON the main power switch.

NOTE

- The new data will overwrite any existing authentication customize data.
- To delete registered data, touch [Delete] and make sure that "OK" appears.

### 5.16.25 Install Data

## NOTE

In the following conditions, installation of data is prohibited.

- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] is set to [Restrict].
- [Administrator Settings] $\rightarrow$ [Security Settings] $>$ [USB Connection Permission settings] $->$ [Detail Setting] $->$ [External Memory (Service)] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to [ON].
(1) Use
- To install voice data, movie data, OCR dictionary data, or PDF/A font into HDD.
- To install panel sound data to FLASHROM inside the control panel unit.
- Selection of [OEM] makes customization of driver name, etc. possible by writing the OEM extended character string in the firmware package and downloading it.
- To use when the logical format of the hard disk is performed

## NOTE

- The [Panel Sound Data] is displayed only when a sound IC chip has been installed.
(2) Procedure

NOTE

- To use voice guidance, optional upgrade kit UK-211 (It is only used on bizhub C368/C308/C258.) and i-Option LK-104 v3 must be activated.
Optional local interface kit EK-608 or EK-609 must be mounted.
- To use OCR function, optional upgrade kit UK-211 (It is only used on bizhub C368/C308/C258.) and i-Option LK-105 v4 must be activated.
- To create PDF/A-compliant PDF files where PDF/A font is used, optional upgrade kit UK-211 (It is only used on bizhub C368/ C308/C258.) and i-Option LK-102 v3 must be enabled.

1. Save data (*.tar) into the root directory of a USB memory device.
2. To install the voice guidance, check if [Administrator Settings] -> [Voice Guidance Settings] -> [Voice Guidance] is set to "Yes".
3. Connect the USB memory device to the machine USB port.
4. Touch [System 2] -> [ $\square$ ] -> [Install Data].
5. Touch [Movie Data], [Voice Data], [OCR Dictionary], [PDF/A Font], [Panel Sound Data], or [OEM]. You can select the above six types of data at a time and install them.
6. Touch [Set].
7. Press the Start key to install the data.
8. Check result "OK" is displayed and touch [END]. NOTE

- If data is already installed, it is necessary to delete old data before installing new one.
*To delete registered data, select the data to be deleted, and touch [Delete] -> [Fix]. Check result "OK" is displayed.

### 5.16.26 Local Interface Kit Setting

(1) Use

- To set whether to enable or disable the Bluetooth function.
- Use this setting upon set-up of the optional local interface kit EK-609.
(2) Default setting
- Unset
(3) Setting item
- Set
- Unset

### 5.16.27 CIS Image Adjustment

(1) Use

- To compensate colors so that the brightness, saturation, and hue of the back side image data (CIS image scanning quality) become consistent with those of the front side image data.
- It will be displayed only when dual scan document feeder is mounted.

| Brightness | Increase in the positive (+) direction makes the data brighter (paler) and increase in the negative <br> $(-)$ direction makes the data darker (deeper). |
| :--- | :--- |

| Saturation | Increase in the positive $(+)$ direction makes the data clearer and increase in the negative ( - ) <br> direction makes the data more subdued. |
| :--- | :--- |
| Hue | Increase in the positive $(+)$ direction processes and outputs the data in the way that corresponds <br> to the clockwise rotation on the hue circle. Increase in the negative ( - ) direction processes and <br> outputs the data in the way that corresponds to the counterclockwise rotation on the hue circle. |

## (2) Default setting

- 0
(3) Setting range
- -3 to +3 (step: 1)

## (4) Procedure

1. Call the Service Mode to the screen.
2. Touch [System 2] -> [ $\square$ ]-> [CIS Image Adjustment].
3. Select [Brightness], [Saturation] or [Hue].
4. Use the $[+]$ or $[-]$ key to change the setting value.
5. Touch [OK].

### 5.16.28 Display Eco Index

## (1) Use

- To set whether or not to display [Power Consumption] and [CO2 Emission] in Menu -> [Counter] -> [Eco Info].

The amount of power consumption displayed on MFP is an estimated value calculated from the average amount of power consumption and the operating hours of MFP, so that is not an exact power consumption value. Therefore, explain this to users before selecting the option of displaying these items.

- To set an emission coefficient used to calculate the amount of CO2 emissions.

As the CO2 emission coefficient is different depending on the electric power provider with whom the user contracts and the user's MFP use environment, the coefficient needs to be set individually.

## (2) Default setting

- Power Savings Display Level: OFF
- Output Coefficient Settings: 0.4166
(3) Procedure

1. Explain to users that [Power Consumption] and [CO2 Emission] displayed on MFP are estimated values, and obtain their consent.
2. Call the Service Mode to the screen.
3. Touch [System 2] -> [ - ] $->$ [Display Eco Index].
4. Select $[\mathrm{ON}]$ in [Power Savings Display Level].
5. Depending on the user's MFP use environment, configure [Output Coefficient Settings] using the 10-key pad.
6. Touch [END].

### 5.16.29 Internal Error. Auto Cancel

(1) Use

- To set whether or not to automatically reset trouble when a trouble code classified as rank B or C occurs.
(2) Default setting
- Rank B: Yes
- Rank C: Yes

## (3) Behavior

- When this setting is set to "Yes," MFP operates as follows:

1. When specified trouble occurs, the trouble warning screen displays for about 10 seconds the message that the trouble is automatically reset. Then automatic trouble reset is performed.
2. If the trouble reset is successful, MFP can be used.

- If the trouble reset fails, retry is performed. (The number of retries is up to 2 times.)

### 5.16.30 Acquiring Settings

## (1) Use

- To count frequency of use by each function and collect machine configuration information.
- This setting allows us to understand the trend in the market and the usage of MFP by collecting and counting frequency of use by each function.
- The collected information can be obtained only via CSRC and cannot be displayed on the control panel or printed.
- To send the collected information, [Administrator Settings] -> [System Settings] -> [List/Counter] -> [Transmission Meter Count and Device Information] must be set to "Allow."

## (2) Default setting

- ON
(3) Setting item
- ON
- OFF

### 5.16.31 Driver Install

## NOTE

Only when one of the following conditions is met, the driver can be installed/uninstalled.

- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory (Service)] $\rightarrow$ [Storage data backup] is set to [Allow].
- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory (Service)] -> [FW Update] is set to [Allow].
- [Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode] is set to [OFF].
(1) Use
- To install/uninstall the loadable device driver.
- Used when the authentication device that needs the loadable device driver (include AU-102 and AU-201S) is attached.
(2) Procedure (Install)

1. Prepare a USB memory where only the loadable device driver is stored in the ROOT directory. (Only one loadable device driver must be stored in the USB memory, and please do not save any other data in the USB memory.)
2. Connect the USB memory to the USB port of the MFP.
3. Call the Service Mode to the screen.
4. Touch [System 2] -> [ - ] -> [Driver Install] -> [Install].
5. Touch [Loadable Driver] and touch [Start] to install the data.
6. Check that data is normally installed from the message that appears on the control panel.
7. Turn OFF the main power switch.
8. Remove the USB memory.
(3) Procedure (Uninstall)
9. Call the Service Mode to the screen.
10. Touch [System 2] -> [ ] -> [Driver Install] -> [Uninstall].
11. Select a driver to be uninstalled.
12. Touch [Start] to uninstall the data.
13. Check that data is normally uninstalled from the message that appears on the control panel.
14. Turn OFF and ON the main power switch.

### 5.16.32 Application Change Setting

(1) Use

- To set whether to allow a change of the settings for the specified application start.
(2) Default setting
- Permit
(3) Setting item
- Permit
- Prohibit
- If "Permit" is set, [Specified Application Start Setting] of the administrator settings can be configured.

### 5.16.33 Custom Pattern

## NOTE

In the following conditions, installation of the custom pattern is prohibited.

- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] -> [USB Connection Permission settings] -> [Detail Setting] -> [External Memory (Service)] is set to [Restrict].
- [Administrator Settings] -> [Security Settings] $\rightarrow$ [Enhanced Security Mode] is set to [ON].
(1) Use
- To register or delete custom patterns.
- To customize the panel display by allowing MFP to read the setting file (CPD file) that defines whether or not to display the various setting keys that appear on the control panel.
- When making the setting file (CPD file), use the "Panel Customization Tool."
(2) Panel customization tool
(a) System requirement

| PC | PC-AT compatible machine |
| :--- | :--- |
| CPU | Conforms to the specifications of the operating system |
| Memory (RAM) | Conforms to the specifications of the operating system |
| HDD | 100 MB or more free space is required <br> Display1280 x 800 pixels or more, 24bit full color <br> OS <br> * 32-bit (x86) and 64-bit (x64) editions of Windows are supported. |

## (b) Operation procedures

When creating a new display setting file (CPD file):

1. Start up the Panel Customization Tool.
2. Set a name for your customization in [Name]. (1 to 24 characters consisting of one-byte alphanumerics and symbols. Comma cannot be used.)
3. Select a model in [Model].
4. Select a preset pattern or marketing area in [Preset]. (The number of functions displayed in the Function list below decreases in the order of Full > Standard > Basic.)
5. Select whether items should be displayed (ticked) or hidden (unticked) in [Function]. (Make this setting both in the Copy tab and the Scan/Fax tab.)
6. Save the setting file (CPD file) with one-byte alphanumerics and symbols in [Save as...].

When editing an existing setting file (CPD file):

1. Start up the Panel Customization Tool.
2. Select a model in [Model].
3. Select an existing setting file (CPD file) in [File] -> [Open].
4. Select whether items should be displayed (ticked) or hidden (unticked) in [Function].
5. Save the setting file (CPD file) with one-byte alphanumerics and symbols in [Save as...].

## (3) Procedure

1. Copy the setting file (CPD file) to the root directory of a USB memory.
2. Connect the USB memory to the USB port of the MFP.
3. Call the Service Mode to the screen.
4. Touch [System 2] -> [ $\quad$ ] -> [Custom Pattern].
5. Select [Custom Pattern 1], [Custom Pattern 2] or [Custom Pattern 3]
6. Touch [Import] and press Start Key to import the data.
7. Select the registered custom pattern in [Administrator Settings] -> [System Settings] -> [Custom Display Settings] -> [Custom Function Pattern Selection]

## NOTE

- To delete the registered data, select the target Custom Display Pattern from the [Administrator Settings] -> [System Settings] -> [Custom Display Settings] -> [Custom Function Pattern Selection] menu while selecting, and touch [Delete] -> [Fix] and check that the result "OK" appears.

### 5.16.34 Maintenance Mode

NOTE

- To enable the maintenance mode, set [Maintenance Mode Access] in the administrator settings to [Allow]. [Administrator Settings] -> [Security Settings] -> [Maintenance Mode Access]
- The authentication procedure to log on to Administrator Settings or Service Mode is canceled during setup or setup change to thereby achieve a shorter operating time.
- The following functions are enabled in the Maintenance Mode.
- A bar appears in the upper row of the control panel.

- The Administrator password is skipped (there is no need to enter the password)
- The CE password is skipped. (there is no need to enter the CE password)
- Even if the software switch setting switch number is not set to [72], Import/Export the setting can be displayed.
(1) Setting items

| Maintenance Mode | Set whether to enable or disable the Maintenance Mode. <br> The default setting is "Invalid". |
| :--- | :--- |
| Display language | Select the language to be displayed in the Maintenance Mode. When [Not Set] is selected, the displayed <br> language is that valid before the machine enters the Maintenance Mode. <br> The default setting is "Not Set". |
| Job History Clear Upon Job <br> Completion | Set whether to erase the past job history and the job history during the Maintenance Mode. <br> The default setting is "Set". |

(2) Exiting the Maintenance Mode

- To exit the Maintenance Mode, select [Service Mode] -> [System 2] -> [Maintenance Mode] and touch [Invalid], or touch the arrow key on the control panel and select [Yes].

[1] Arrow key

### 5.16.35 Smart Fusing Control

(1) Use

- Specifies whether or not to apply low power fusing control.
- For details of the low power fusing control, see "Smart fusing control".

| [Permit] | Applies low power fusing control by lowering the target temperature as much as possible in response to the <br> single sheet data. Cuts down electric power consumption (TEC value). |
| :--- | :--- |
| [Prohibit] | Controls the adjustment of the specified fusing temperature. |

## (2) Default setting

- Permit
(3) Setting item
- Permit
- Prohibit

### 5.16.36 Clean Unit Setting

(1) Use

- bizhub C368/C308/C258: Use this feature upon optional clean unit CU-101 set-up.
- bizhub C658/C558/C458: Use this feature upon optional clean unit CU-102 set-up.
(2) Default setting
- Nott Installed

## (3) Setting item

- Installed
- Nott Installed

### 5.16.37 Auth. Function Enable

(1) Activation
(a) Use

- Use to activate the advanced function after certification.
(b) Procedure(Entering function codes manually)

1. Call the Service Mode to the screen.
2. Touch [System 2] -> [Auth. Function Enable] -> [Activation].
3. Confirm that [Function Code] is selected, and the press the [Function Code].
4. Enter the function code and press [OK].
5. Confirm the instructions on-screen and press [Confirm].
(c) Procedure(Importing function codes via a USB device)
6. Connect the USB device that contains the functions codes to be activated.
7. Call the Service Mode to the screen.
8. Touch [System 2] -> [Auth. Function Enable] -> [Activation].
9. Confirm that [USB] is selected.

NOTE

- [USB] is only displayed when a USB device that contains functions codes to be activated is connected.

5. Confirm the instructions on-screen and press [Confirm].
(2) List
(a) Use

- To display a list of currently activated functions.

### 5.17 Counter

- The counter displays the counts of various counters to allow the technical representative to check or set as necessary.

### 5.17.1 Common procedure

1. Call the Service Mode to the screen.
2. Touch [Counter] to show the counter menu.
3. Select the specific counter to be displayed.
4. To clear the counts of two or more counters within a group or across different groups at once, touch [Counter Reset], select the specific counters to be cleared, and touch [END]. Two or more counters can be selected. (However, the [Service Call], [Service Total], [Detail code history], and [JAM] counters cannot be selected.)

### 5.172 Life

(1) Use

- To check the number of hours or times each of the different maintenance parts has been used.
- To clear the count of each counter.
- To perform New Release in fusing unit and transfer belt unit.
- To check how many times maintenance parts have been used.
- When each of the maintenance parts is replaced.

## (2) Procedure

## (a) Counter clear

- To clear the count of a counter, select the specific part and touch Clear.
- It is not possible to clear the count of the counters for the fusing unit, transfer belt unit, transfer Roller Unit, drum unit, developing unit and TCR new article detection.
- For the count method of each counter, see the table "Count method of each life counter."

Count method of each life counter

| Counter item |  |
| :---: | :---: |
| Fusing Unit Page Count | - Counts how many sheets have been ejected. The counter increases by 1 per every 216 mm <br> in the paper feeding direction and shows the total count. For paper length less than 216 mm <br> in the paper feeding direction, the counter uses 216 mm as the paper length. |
| Transfer Belt Unit Rotation Time | - Counts how many hours the transfer belt unit has turned. |
| Transfer Belt Unit Page Count | - Counts how many sheets have been ejected. The counter increases by 1 per every 216 mm <br> in the paper feeding direction and shows the total count. For paper length less than 216 mm <br> in the paper feeding direction, the counter uses 216 mm as the paper length. |
| Transfer Roller Unit | Counts how many hours the transfer roller unit has turned. |
| Toner Filter | - bizhub C368/C308/C258: Not used <br> - bizhub C658/C558/C458: Counts how many sheets have been printed for color printing and | black printing.

For the life counter, value based on the calculation below is displayed.
Value (1) or (2) below whichever is larger than the other one
(1) Number of prints for black printing
(2) Number of prints for color printing $\div 150,000 \times 300,000$
(However, due to the formula for each internal counter for CMY and K, the toner filter counter may not count even when black and white printing is executed.
Besides, the counter life threshold during printing with K only $(300,000)$ is two times as large as that during printing with CMY only $(150,000)$. Thus, the number of sheets printed with CMY only are doubled to count.)

| Drum Unit (C) Rotation Time | - Counts how many hours PC drum has turned. |
| :---: | :---: |
| Drum Unit (M) Rotation Time |  |
| Drum Unit (Y) Rotation Time |  |
| Drum Unit (K) Rotation Time |  |
| Developing Unit (C) Print Count | - Counts how many sheets have been printed. The counter increases by 1 per every 216 mm in the paper feeding direction and shows the total count. For paper length less than 216 mm in the paper feeding direction, the counter uses 216 mm as the paper length. |
| Developing Unit (Y) Print Count |  |
| Developing Unit (M) Print Count |  |
| Developing Unit (K) Print Count |  |
| TCR new article detection (C) | - Count the number of the replacement of the toner cartridge. |
| TCR new article detection (M) |  |
| TCR new article detection (Y) |  |
| TCR new article detection (K) |  |
| 1st Feed Count | - Number of sheets of paper fed from tray 1 |
| 2nd Feed Count | - Number of sheets of paper fed from tray 2 |
| 3rd Feed Count | - Number of sheets of paper fed from tray 3 |
| 4th Feed Count | - Number of sheets of paper fed from tray 4 |
| Manual Tray Feed Count | - Number of sheets of paper fed from the bypass |
| 1st Feed Retry Count | - Count the frequency of paper feed retry of tray 1. |
| 2d Feed Retry Count | - Count the frequency of paper feed retry of tray 2. |
| 3rd Feed Retry Count | - Count the frequency of paper feed retry of tray 3. |
| 4th Feed Retry Count | - Count the frequency of paper feed retry of tray 4. |
| Manual Tray Feed retry Count | - Count the frequency of paper feed retry of manual bypass tray. |
| LCT Feed Retry Count | - Count the frequency of paper feed retry of LCT. |
| LCT Parts | - bizhub C368/C308/C258: Number of sheets of paper fed from the LCT (LU-302). <br> - bizhub C658/C558/C458: Number of sheets of paper fed from the LCT (LU-302 or LU-207). |
| LCT (Built-in) Parts | - bizhub C368/C308/C258: Number of sheets of paper fed from the built-in LCT(PC-410) <br> - bizhub C658/C558/C458: Number of sheets of paper fed from the built-in LCT(PC-415) |
| ADF Feed | - Number of sheets of original fed through the take-up section of the DF |
| Scan Count (Original Glass) | - Count the number of reads via the original glass. |
| ADF Reverse | - bizhub C368/C308/C258: Number of sheets of original fed through the turnover unit of the DF (DF-629 only) <br> - bizhub C658/C558/C458: Not used |

## (3) New Release

- After replacing a fusing unit or transfer belt unit, perform New Release to clear its life counter.

1. Touch [Counter] -> [Life] -> [New Release].
2. Open the front door or the lower front door.
3. Select a unit where New Release is made.
4. Press the Start key and perform New Release.
(4) New Release Disable mode

- To enable a unit that is used temporarily for troubleshooting to be used again as a new unit in another machine, the New Release Disable mode is provided.
- Applicable units are the following units that have the new unit detection feature.

Drum unit (each color), developing unit (each color)

- See the " I.7.3.9 (4) Notes when using the New Release Disable mode" for the method of enabling the New Release Disable mode.

### 5.17.3 Service Call

(1) Use

- To count and display how many times trouble has been detected on a trouble type basis.
- Use this feature to check how many times trouble has occurred.

## NOTE

" In the service call counter list, "Reboot" shows how many times abort code (C-FXXX) has occurred.

### 5.17.4 Section Service Call

(1) Use

- To count and display how many times trouble has been detected during a certain period, i.e. an interval between service visits, on a trouble type basis.
- Use this feature to check how many times trouble has occurred in a certain period, i.e. an interval between service visits.
- By clearing the counter at the time of visit to your customer, i.e. service visit, you can check how many times trouble has occurred since the previous visit. To reset the counter, use [Counter Reset]
NOTE
" In the zone service call list, "Reboot" shows how many times abort code (C-FXXX) has occurred.

### 5.17.5 Warning

(1) Use

- To count and display how many times malfunction code has been detected on a malfunction code type basis.
- To count and display how many times tray lift-up failure occur on a tray type.
- To clear of count value.
- To check the number of warning conditions detected according to the warming type.

## (2) Procedure

- To clear the count of a counter, select the specific part and touch Clear.
- If a counter is cleared mistakenly, touch Interrupt which will undo the clearing operation.

### 5.17.6 Maintenance

(1) Use

- To set a count value for maintenance of any given part.
- When any given part is replaced.

## (2) Procedure

Maint.-Set

- Enter the maintenance counter value from the 10-key pad.

Maint.-Count

- The number of sheets that have been ejected is counted up. (1 sided: 1 count, 2 sided: 2 count)
- Touch Clear will clear the count.

### 5.17.7 Service Total

(1) Total
(a) Use

- To display the count value for the service total counter.
- Use to check the total No. of printed pages including the ones printed by the Service Mode.
(b) Procedure
- Service Total: No. of pages printed by user mode and Service Mode.
- Service Total (Duplex): No. of pages printed by user mode and Service Mode in duplex.

## (2) Paper Size 1/Paper Size 2

(a) Use

- To display the count value for service total counter of each paper size.
- To check the total number of printed pages including the one at Service Mode according to each paper size.
- The count of Paper Size 1 and Paper Size 2 that contain the following paper sizes is provided respectively.

| Paper Size 1 | SRA3, A3, A4, A4S, A5, A6, B4, B5, B5S, B6, Post., $12 \times 18,11 \times 17,8 \frac{1}{2} \times 14,8 \frac{1}{2} \times 11,8 \frac{1}{2} \times 11 S, 7 \frac{1}{4} \times$ <br> $10 \frac{1}{2}, 5 \frac{1}{2} \times 8 \frac{1}{2}, 4 \times 6$, Foolscap |
| :--- | :--- |
| Paper Size 2 | $8 \mathrm{~K}, 16 \mathrm{~K}$, Banner Paper, Others |

### 5.17.8 Counter of Each Mode

(1) Use

- To display the printed pages in the following specified modes; copy, printer, scanner, and fax. It also displays the count value of using the specified mode.

| Copy/Print/Scanner counter | Displays individual counts in copy, printer, and scan mode. |
| :--- | :--- |

| Fax-related counter | Displays individual counts in fax mode. |
| :--- | :--- |
| Counter by finishing option | Displays individual counts on a finishing option basis. |
| Stabilization counter | Displays individual counts on a basis of the factors that cause image stabilization. <br> The counter helps to understand what causes image stabilization and how to <br> improve image stabilization control. |
| PJ counter | Job modes of jobs processed by the main unit are classified and labeled using <br> count values $1 \mathrm{P} / \mathrm{J}, 2 \mathrm{P} / \mathrm{J}, \ldots, 10 \mathrm{P} / \mathrm{J}, 11 \mathrm{P} / \mathrm{J}$, and so on. <br> The counter is used to understand how the machine has been used in the field. |

### 5.17.9 Service Call History (Data)

(1) Use

- To display the trouble history in chronological order.

### 5.17.10 ADF Paper Pages

(1) Use

- To display the No. of sheets and mixed originals fed to the automatic document feeder.

### 5.17.11 Paper Jam History

(1) Use

- To display the jam history in chronological order.

NOTE
" [Code] displayed on the screen of JAM history indicates JAM code. For details of JAM code, see "List of the JAM code."

### 5.17.12 Fax Connection Error

(1) Use

- To display the No. of fax transmission errors occurred.

### 5.17.13 ADF Scan Glass Contamin. Counter

(1) Use

- To display the average number of detected stain on the DF original glass (front side)/CIS glass (back side) at the pre-detection.
- Detection of CIS glass (back side) is available only when dual scan document feeder is mounted.

| Pre-detection small size (Front Side) | Small-sized detected stain divided by the number of times pre-detection is practiced (average <br> number of detected lines) will be displayed. |
| :--- | :--- |
| Pre-detection small size (Back Side) | Small-sized detected stain divided by the number of times pre-detection is practiced (average <br> number of detected lines) will be displayed. |
| Cleaning brush rotation count (Front <br> Side) | Total rotation count is displayed by counting 1 per one rotation of cleaning brush. |
| Cleaning brush rotation count (Back <br> Side) | Total rotation count is displayed by counting 1 per one rotation of cleaning brush. |

## (2) Procedure

- To clear each counter value, select the items to be cleared, and touch Clear.

### 5.17.14 Parts Counter (Fixed)

- It will be displayed only when the optional finisher is mounted.
(1) Use
- When the optional finisher is mounted, the parts counter screen displays the relevant parts and their counts.
- When the relevant parts are replaced, their counters need to be reset to update the service history.
- Service history can be maintained from this menu.

NOTE

- See the table below for the relevant parts and count method.
(2) Procedure

1. Touch in the order of [Service Mode] -> [Counter] -> [ $\uparrow$ ] -> [Parts Counter (Fixed)].
2. Check the parts counter or display the relevant part of which counter will be reset.
3. Check the part count. To reset the count value, touch the key of the part where the counter is reset. Touch the Clear key.
(3) Fixed parts to be counted

| No. | CSRC <br> parameter | Parts name | Parts number | Limit value | Count condition | FS-534 / <br> FS-534S <br> D | FS-533 <br> 001 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 02 | FNS 2-Staple Stapler | PJ085601 | 300,000 | - | - |  |  |
| 02 | 23 |  <br> Fold Stapler | A10D9293 | 200,000 | 1 count for each sheet ejection in both 1 <br> staple and 2 staple mode. | O | - |

| No. | CSRC parameter | Parts name | Parts number | Limit value | Count condition | $\begin{gathered} \hline \text { FS-534 / } \\ \text { FS-534S } \\ \text { D } \end{gathered}$ | FS-533 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

### 5.17.15 Jam

(1) Use

- To count and display how many times jam has been detected on a jam location basis.

### 5.17.16 Section JAM

- To count and display how many times jam has been detected in a certain period, i.e. an interval between service visits, on a jam location basis.
- Use this feature to check how many times jam has occurred in a certain period, i.e. an interval between service visits.
- By clearing the jam counter at the time of visit to your customer site, i.e. service visit, you can check how many times jam has occurred since the previous visit.
To reset the counter, use [Counter Reset].

### 5.17.17 Instantaneous Power Failure

(1) Use

- To display the latest 10 power shutdown events during operation of this machine in time axis.
- To reset the counter, use [Counter Reset].

### 5.17.18 Detail code history

(1) Use

- To display up to 250 detailed codes of the trouble code FA14 (thread soft error)and E301 by "Time series order", "Monthly occurrence" or "Detailed Code Differentiator".

### 5.17.19 Recoverable error counter

## NOTE

- This function is displayed only when touching [Counter Reset].
- Check the detailed codes of this function as shown below.
- Check with the Machine Management List which is output by setting [Service Mode] -> [List Output] -> [USB save].
- Check the count of network error using CSRC.
(1) Use
- To count the detected network error and an error that can be recovered with a function via the network by each root cause.
- To reset the counter.

### 5.18 List Output

### 5.18.1 Batch list CSV output

NOTE
This setting is displayed only when the following conditions are satisfied.

- [Detail Setting] is selected in [Administrator Settings] -> [Security Settings] -> [USB connection Permission setting].
- [Administrator Settings] -> [Security Settings] -> [USB connection Permission setting] -> [External Memory (Service)] -> [Individual Settings] is selected.
- Enhanced Security Mode is disabled.
(1) Use
- To save various lists data into a USB memory device all together with the CSV format.
- Compared to output to paper, outputting various lists data to the USB memory device can save time, paper, and toner. With the output data, analyzing the machine statistically becomes easier.
- Lists data to be output are as follows:

| Target list |  |
| :--- | :--- |
| Machine Management List | S1 |
| Adjustments List | S2 |
| Parameter List | S3 |
| Service Parameter | S4 |
| Protocol Trace List | S5 |

| Target list | Data symbol |
| :--- | :--- |
| Fax Setting List | S6 |
| Management List | A1 |
| Paper Size/Type Counter | A2 |
| Network Settings List | A3 |
| Configuration Page | U1 |
| PCL Font List | U2 |
| PS Font List | U3 |
| Meter Count | C1 |

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [List Output].

Insert the USB memory device to the USB port (for user).
4. Touch [USB save] displayed in the Batch List CSV Output.
5. Press the Start key. Then, List data are transferred to the USB memory device.

Confirm that "OK" is displayed as the result of data saving.
(a) File names of lists data

- Each list data has its file name in accordance with the following file name rule.
[2-digit data symbol that corresponds to each list (see the above table)] + [(underscore)] + [13-digit serial number] + [6-digit date (year, month, and day)] + [2-digit hour] + [2-digit minute].csv

### 5.18.2 Machine Management List

(1) Use

- To produce an output of a list of setting values, adjustment values, total counter values, and others.
- At the end of setup.
- At occurrence of a malfunction.
- To produce an output of a list of Software Switch Setting.

## (2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

NOTICE

- When performing list output, a detail code history list will be output.
- This [Detail code] is set to analyze the cause of the C-FA14 error or the C-E301 error.
- The refer, to send inquiries to KM, also send the "detail code history list".

### 5.18.3 Adjustments List

(1) Use

- To output the adjustment list for machine adjustment, process adjustment, etc. in Service Mode.
- At the end of setup.
- At occurrence of a malfunction.

## (2) Procedure

- Load the A4S/A4 or $81 / 2 \times 11 \mathrm{~S} / 81 / 2 \times 11$ plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

### 5.18.4 Parameter List

(1) Use

- Output a nonvolatile parameter list.

## (2) Procedure

- Load the A4S/A4 or $81 / 2 \times 11$ S/8 $1 / 2 \times 11$ plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

### 5.18.5 Service Parameter

(1) Use

- Output a FAX Service Mode set value list.

## (2) Procedure

- Load the A4S/A4 or $81 / 2 \times 11 \mathrm{~S} / 81 / 2 \times 11$ plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

### 5.18.6 Protocol Trace

(1) Use

- Protocol Trace List (Last): The facsimile protocol of the communication which was executed previously is output.
- Protocol Trace List (Error): Output the facsimile procedure for the last error communication.
(2) Procedure
- Load the A4S/A4 or $81 / 2 \times 11 \mathrm{~S} / 81 / 2 \times 11$ plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

### 5.18.7 Fax Setting List

(1) Use

- Output a FAX user set value list. (Items vary depending on models.)
(2) Procedure
- Load the A4S/A4 or $81 / 2 \times 11 \mathrm{~S} / 81 / 2 \times 11$ plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

### 5.18.8 Fax Analysis List

(1) Use

- Following list is output in the Fax Analysis List.
- Parameter List
- Machine Management List
- Protocol Trace List (Error)
- Fax Setting List
- Communication Management List
- Service Parameter List
(2) Procedure
- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

### 5.19 State Confirmation

### 5.19.1 Sensor Check

(1) Use

- To display the states of the input ports of sensors and switches when the machine remains stationary.
- Used for troubleshooting when a malfunction or a misfeed occurs.

## (2) Procedure

- The operation of each of the switches and sensors can be checked on a real-time basis.
- It can be checked as long as the $5-\mathrm{V}$ power line remains intact even when a door is open.
(a) Electrical components check procedure through input data check
- When a paper misfeed occurs in the paper feed section of the machine, the tray 2 paper feed sensor is considered to be responsible for it.

1. Remove the sheet of paper misfed.
2. From the sensor check list that follows, check the panel display of the tray 2 paper feed sensor

- For the tray 2 paper feed sensor, you check the data of "Paper feed" of "Paper feed tray2."

3. Call the Service Mode to the screen.
4. Select [State Confirmation] -> [Sensor Check] and then select the screen that contains "Paper feed" under "Paper feed tray2."

- For "Paper feed" under "Paper feed tray2," display the "Sensor monitor 1" screen.

5. Check that the data for "Paper feed" under "Paper feed tray2" is "0" (sensor blocked).
6. Move the actuator to unblock the tray 2 paper feed sensor.
7. Check that the data for "Paper feed" under "Paper feed tray2" changes from "0" to " 1 " on the screen.
8. If the input data is " 0 ," change the sensor.

## (3) Sensor check screens

- These are only typical screens which may be different from what are shown on each individual machine.
(a) bizhub C368/C308/C258
- Sensor monitor 1 (Main body, PC-110/210)

| Symbol | Panel display | Part/signal name | Operation characteristics/panel display |  |

### 5.19.2 Table Number

(1) Vdc-C Vg-C
(a) Use

- When IDC is detected, for plain paper, Thick $1 / 1+$, Thick $2 / 3 / 4$, and Black, the machine independently displays each $\mathrm{Vg} / \mathrm{Vdc}$ output value that is calculated based on the density (toner amount stuck on the belt) of the test pattern created on the transfer belt.
- Standard values:
- Vdc: around 300 V to 400 V
- Vg: around 450 V to 550 V
- Used for troubleshooting of image problems.
- If the value is high: It is decided that the image density is low by the IDC detection, and the $\mathrm{Vg} / \mathrm{Vdc}$ value is corrected high.
- If the value is low: It is decided that the image density is high by the IDC detection, and the $\mathrm{Vg} / \mathrm{Vdc}$ value is corrected low.

## (2) LD Light Value

(a) Use

- Shows the LD light value of each color of toner during print image formation.
(3) Charging AC Output Value 1
(a) Use
- Shows the AC voltage value applied to the charging roller of each color of toner during print image formation.
(4) Charging AC Output Value 2
(a) Use
- Shows the current value applied to the charging roller of each color of toner during print image formation.

### 5.19.3 Level History 1

(1) Use

- To display TCR (T/C ratio), IDC/registration sensor output values, and fusing temperature.
- Used for troubleshooting of image problems.
(2) Procedure

| TCR-C/-M/-Y/-K | Shows the T/C output reading taken last. |
| :--- | :--- |
| IDC1/IDC2 | Shows the latest IDC data. |
| Middle heat temperature | Not used |
| Medium Heating Temperature | Displays the latest detected temperature of the heating roller thermistor/2. |
| Heat edge temperature | Displays the latest detected temperature of the heating roller thermistor/1. |
| Main Heating Temperature | Displays the latest detected temperature of the heating roller temperature sensor. |

"Reading taken last" means

- Density of toner of the latest image.
- When a test pattern is produced by pressing the Start key while level history 1 is being displayed.

### 5.19.4 Level History 2

(1) Use

- IDC Sensor (Transfer belt bare surface level) as adjusted through the image stabilization sequence and ATVC value.
- Used for troubleshooting of image problems.

## (2) Procedure

| IDC Sensor Adjust $1 / 2$ | Shows the intensity adjustment value $(0$ to 255$)$ of the IDC sensor. <br> The normal value is 35 to 110 , but the value increases depending on how long the machine has <br> been used. |
| :--- | :--- |
| ATVC -C/-M/-Y/-K | Shows the first image transfer nearest output value. $(5$ to $40 \mu \mathrm{~A})$ |
| ATVC -2nd | Shows the second image transfer nearest output value. $(0$ to $4,800 \mathrm{~V})$ |

### 5.19.5 Temp. \& Humidity

(1) Use

- Displays the temperature and humidity in the machine.
- Used as reference information when a malfunction occurs.

## (2) Procedure

| Temp-Inside | 0 to $80^{\circ} \mathrm{C}$ in $1^{\circ} \mathrm{C}$ increments |
| :--- | :--- |
| Humidity | 10 to $90 \%$ in $1 \%$ increments |
| Absolute Humidity | 0 to 255 in 1 increments |
| Paper temperature | 0 to $100^{\circ} \mathrm{C}$ in $1^{\circ} \mathrm{C}$ increments |

### 5.19.6 CCD Check

(1) Use

- To display the D/A value of CCD clamp/gain for R, G, and B.
- To display the D/A value of CIS clamp/gain. (Only when dual scan document feeder is mounted)
- Used for troubleshooting for the CCD sensor/CIS.

## (2) Procedure

- Use the following guidelines on the correct range of values.
(a) CCD
- CLAMP: 0 (remain static)
- GAIN: The maximum value and the minimum value of the output value should be within the range shown below.

| Acceptable gain range | Minimum value | Maximum value |
| :---: | :---: | :---: |
| R | 20 | 238 |
| G | 10 | 222 |
| B | 70 | 247 |

(b) CIS (Only when dual scan document feeder is mounted)

- CLAMP: -36 to +36 * Show the maximum value for controlling the black level of the CIS.
- GAIN: 70 to 255 * Show data themselves

### 5.19.7 Memory/Storage Adjustment

## (1) Memory Check

(a) Use

- If the copy image is faulty.
- To check correspondence of data written to and that read from memory through write/read check.
- The following shows the memory names that correspond to each memory where check is made.

| WORK0 | Standard memory (onboard) |
| :--- | :--- |
| WORK1 | Standard memory (DIMM) |
| FILE0, 1 | ASIC777 memory installed in the MFP board |
| FILE2, 3 | Memory of ASIC30 installed in the EIF board for IC-416 |
| FILE4, 5 | Memory of ASIC777 installed in the DS board (only when dual scan image processing board is mounted) |

<Rough Check>

- A check is made for each memory to see if the image data reading and writing are correctly made in a very limited area.
- The progress of the check sequence is displayed in percentage. (calculated based on all checks from WORK0 to FILE5 constituting 100\%)
- When the rough checks of all memories are completed, results are displayed beside the memory display. (OK/NG) Rough check time: approx. 10 sec
- Typical rough check result display: Exemplary display when all memories have been checked okay

<Detail Check>
- A write check and a read check are repeated in all areas for each memory.

NOTE

- For a write check, a specific write value is set and the specific value is written in all areas of the memory and the written data is thereafter read. This sequence is performed for all memories (from WORK0 to FILE5). (which forms one cycle of the check sequence)
- When one cycle of the check sequence is completed, the write value is changed automatically and a new check cycle is performed. This sequence is repeated with the write value changed for each sequence.
- Unlike the rough check, the detail check is not automatically terminated. The check cycle is repeated until the Stop key is pressed.
- The progress of the check sequence is displayed in percentage. (calculated based on all checks from WORK0 to FILE5 constituting 100\%)
NOTE
- The check progress status display is $100 \%$ when one cycle of the check sequence is completed.
- The check progress status display is automatically reset to $0 \%$ and restarted as soon as a new check sequence is started.
- The detail check of all memories (one cycle) is completed in about 3 min.
- The press of the Stop key will terminate the detail check.
- If a write/read error is detected, NG appears beside the memory display and the check sequence is automatically terminated.

## (b) Rough check procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [Memory Check].
3. Touch [Rough Check].
4. Press the Start key to start the check procedure.

NOTE

- The rough check procedure can be interrupted by pressing the Stop key.

5. The procedure is automatically completed (in about 10 sec .) and the results are shown on the screen.
6. If the check results for WORK0 to 1 are NG, check the memory for connection or replace the memory with a new one.

- If the check results for FILE0 to 1 are NG, replace the MFP board with a new one.
- If the check results for FILE2 to 3 are NG, replace the EIF board for IC-416 with a new one.
- If the check results for FILE4 to 5 are NG, replace the dual scan image processing board with a new one. (only when dual scan image processing board is mounted)

## (c) Detail check procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [Memory Bus Check].
3. Touch [Detail Check].
4. Press the Start key to start the detail check procedure.

- The check sequence is started and the current check progress status is displayed in percentage.

5. When the check progress status display is $100 \%$ after the start of the check sequence, the first check cycle is completed. (which takes about 3 min .)

- The results are displayed on the screen. (The sequence has been checked okay, if NG does not appear.)
- The current check progress status display is associated with the latest check sequence. NOTE
- If a write/read error is detected, NG appears beside the memory display and the check cycle is automatically terminated.

6. Press the Stop key at any timing to terminate the detail check procedure.
7. If the check results for WORK0 to 1 are NG, check the memory for connection or replace the memory with a new one.

- If the check results for FILE0 to 1 are NG, replace the MFP board with a new one.
- If the check results for FILE2 to 3 are NG, replace the EIF board for IC-416 with a new one.
- If the check results for FILE4 to 5 are NG, replace the dual scan image processing board with a new one. (only when dual scan image processing board is mounted)
(2) Compress / Decompression Check
(a) Use
- To check whether compression and decompression are carried out properly.
- If the copy image is faulty.

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [Compress/Decompression Check].
3. Press the Start key to start the check procedure.
4. The check result will be displayed.

## (3) Memory Bus Check

(a) Use

- To check to see if image data is correctly transferred from scanner to memory, and from memory to printer.
- Bus check between scanner and memory has two steps; the scanner internal check step as internal processing and the check step between scanner and memory. If either of the two steps is NG, NG1 or NG2 is displayed respectively.
- If the copy image is faulty.

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [Memory Bus Check].
3. Select either [Scanner -> Memory], [Memory -> PRT], or both.
4. Pressing the Start key will start the memory bus check and be terminated automatically.
5. The check result will be displayed, [OK] or [NG].

## (4) DSC Bus Check

(a) Use

- To check the connection between the DSC board and the scanner section when optional security kit SC-508 is installed.
- When an error is detected after checking, NG1 or NG2 is displayed depending on the location of the board where the defect is found.

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [DSC Bus Check].
3. Select "Front side" or "Back side", and touch [Scanner -> DSC].

NOTE

- The DSC bus check for the back side can be performed only when dual scan document feeder is mounted.

4. Press the Start key to start the check procedure.
5. The check result will be displayed.

## (5) Storage R/W Check

(a) Use

- To check to see if the hard disk is connected properly, and if read/write operation of the hard disk is correctly performed.
- When the hard disk is mounted.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [Storage R/W Check].
3. Press the Start key to start the check procedure.
4. When the check procedure is completed, the results are shown on the screen.
(6) Format
(a) Use

- To format the hard disk.
- The function proceeds in the order of physical format to logical format.
- If the hard disk is yet to be formatted, the malfunction code "C-D010" will appear. Ignore this code and continue with the formatting procedure.
- Use when replacing the standard equipment hard disk. (Logical format) NOTE
- When replacing the hard disk during the mirroring operation (when optional hard disk HD-524 is installed), it is necessary to execute [HDD Mirroring Rebuild]. Logical formatting is not required.
- When the hard disk is to be initialized. (Physical format to logical format) NOTE
- As HDD formatting deletes Movie data, Voice data, OCR dictionary data, PDF/A font, and OCR font, and Unicode font you need to reinstall these data as necessary after using this function.
- When HDD formatting is executed with the HD-524 installed, both HDD (A) and HDD (B) are formatted. All data on the Slave is deleted.
- By using in conjunction with the security setting HDD Data Backup function, data can be restored to the HDD once it is formatted.
(b) Procedure (Physical Format)

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [Format].
3. Touch [Physical Format].
4. Press the Start key to start the formatting sequence.
5. The sequence will be automatically terminated as it is completed.
6. Turn off the main power switch and turn it on again more than 10 seconds after.

## NOTE

" If [HDD Encryption Setting] is not set to "ON," when the physical format is completed and the main power switch is turned OFF/ON, a message that prompts you to set an encrypting word is displayed. If you perform [HDD Encryption Setting], after setting an encrypting word, perform the logical format.

## Procedure (Logical formatting (when initially setting up a standard replacement HDD))

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Memory/Storage Adjustment] -> [Format].
3. Touch [Logical Format].
4. Press the Start key to start the formatting sequence.
5. The sequence will be automatically terminated as it is completed.
6. Turn off the main power switch and turn it on again more than 10 seconds after.

* Formatting the hard disk will erase all data contained in it.

## (7) eMMC -> HDD Data Copy

- Use prohibited

NOTE

- The use of this function is prohibited.
- Executing this function automatically formats the HDD, erasing all data recorded on the HDD.

## (8) HDD Mirroring Rebuild

(a) Use

- Displayed when optional hard disk HD-524 is installed.
- Use when setting up optional hard disk HD-524

Copy data from the standard equipped hard disk to the additionally installed hard disk.

- Use when replacing a failed hard disk.

Copy data from a normally operating hard disk to a replacement hard disk.
NOTE

- The HDD mirroring rebuilding process takes approx. 1 hour.
(b) Procedure
. Install the second hard disk.

2. Turn ON the main power switch.
3. Call the Service Mode to the screen.
4. Select [State Confirmation] -> [Memory/Storage Adjustment] -> [HDD Mirroring Rebuild].
5. Press the Start key. Copy the entire data from the Master disk to the Slave disk.

The Start key orange light turns ON, and the operation progress displays in the screen. (Processing time: approx. 1 hour) NOTE

- Never turn Off the main power supply or pull out the power plug during HDD mirroring rebuilding (below: rebuilding).
- When rebuilding is executed, the process cannot be paused or forcibly quit until rebuilding is completed.
- Jobs can still be executed even during rebuilding. However, it will take a longer time to complete the rebuilding.
- To execute a job during rebuilding, touch the [OK] key twice, and exit Service Mode. Rebuilding will continue to run in the background.
- Check the mirroring rebuilding progress by selecting [Service Mode] -> [State Confirmation] -> [Memory/Storage Adjustment].

6. When the data has finished copying, the screen displays $100 \%$, and the Start key light changes color to blue.
7. Touch [OK] twice, and exit Service Mode
8. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

### 5.19.8 Memory/Storage Status

(1) Use

- To display the condition and amount of the memory and hard disk.
- Displays the hard disk operating state, Master disk designation, rebuilding state when optional hard disk HD-524 is installed.

### 5.19.9 Color Regist

(1) Use

- To check each of $C, M$, and $Y$ for color shift amount.
- The data is updated after a color shift correction has been made or color shift adjustment has been completed.
- To check when there is a color shift.
- To display the results of skew adjustment.

## (2) Procedure

- For each of $C, M$, and $Y$, the color shift amount (in $X$ and $Y$ directions) at two locations (one at the front and the other in the rear) and the difference in color shift amount between the front and rear ( $X$ and $Y$ directions) are displayed.
- Display unit: dots
- Individual color shifts of C, M, and Y are based on $K$ and their amounts are displayed.
- For details of skew adjustment, see the " I.5.4.9 Print Head Skew Adj.".

### 5.19.10 Load Check

(1) Use

- To check each device (electric component) for proper condition by individually activating the load associated with the device.
- To identify faults at the time of troubleshooting.

## NOTE

Take note of the following during the load check mode.

- No malfunction is detected and no count is taken of consumables life and related items.
- Two or more devices (motors, clutches, solenoids, and fans) cannot be checked simultaneously.
- Detection of proper installation of various types of units and waste toner box does not function. During the check procedure, therefore, make sure that the unit in question is installed correctly or yet to be installed.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Load Check].
3. Open the front door, the lower front door or the right door.
4. Touch [Start Load Check].
5. Close the door opened on step3.

Referring to the load check list, enter a check code.
Referring to the load check list, enter a multi code.
Press the Start key. When pressing the Start key, the specified load is activated. The Start key blinks in orange.
Check the load operation and output of signals.
10. Press the Stop key to stop the check operation and check the result.

NOTE

- Depending on the type of load being activated, after the lapse of the specified time or after the transition to the specified state, the corresponding device automatically stops working.
- When 'NG' is displayed, check the wiring and connectors.

11. To check another load or signal output, repeat steps 6 to 10 .
12. Turn OFF the main power switch and turn it ON again more than 10 seconds after.

NOTE

- To exit from the load check mode, be sure to turn off and on the main power switch.

At the point when you display [Service Mode] -> [State Confirmation] -> [Load Check], MFP enters into load check mode. Regardless of whether load check is actually performed or not, the main power switch must be turned off and on to exit from load check mode.
(3) Load check list

| Check code | Multi code | Symbol | Load name | Operation outline | Note |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 8 | 1 | EL/Y, EL/ <br> M, EL/C | Erase LED /Y,M,C | Outputs erase LED. <br> <At the time of start> <br> 1. Turns on erase LED/Y, M, C remote. <br> 2. |  | 129 | $\begin{gathered} \text { SD2(DF-62 } \\ \text { 9)/ } \\ \text { SD1(DF-70 } \\ \text { 4) } \\ \hline \end{gathered}$ | Stamp solenoid | Turns ON the solenoid. | DF-629/DF-704 |
|  | 130 | SD1 | Exit solenoid | Turns ON the solenoid. | DF-629 |
|  | 769 | M5 | Facing plate home detection operation | Drives the CIS cleaning motor. | DF-704 |
|  | 770 |  | Facing plate brush return operation |  | DF-704 |
|  | 771 |  | Facing plate high-speed rotation operation |  | DF-704 |
|  | 785 | - | Rear panel lamp turns ON | Turns OFF after 60 seconds or by pressing the Stop key. | DF-704 |

| 85 | 1 | M5 | ADU transport motor high speed | Drives the motor at the specified speed. | - |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2 |  | ADU transport motor middle speed |  | - |
|  | 3 |  | ADU transport motor low speed |  | - |
|  | 4 |  | ADU transport motor minimum speed |  | It is only used on bizhub C658/C558/ C458. |
|  | 5 | M26 | ADU transport motor2 high speed | Drives the motor at the specified speed. | It is only used on bizhub C658/C558/ C458. |
|  | 6 |  | ADU transport motor2 middle speed |  |  |
|  | 7 |  | ADU transport motor2 low speed |  |  |
|  | 8 |  | ADU transport motor2 minimum speed |  |  |

## NOTE

- *1: If the PC motor is energized with the 1st transfer roller in its pressed position, the transfer belt and the photoconductor drum may be damaged.
- *2: The cleaning blades of the drum unit/K and the transfer belt unit, if driven with no toner deposited, may be curved to warp.
- *3: The cleaning blades of the drum unit/Y,M,C, if driven with no toner deposited, may be curved to warp.
- *4: The pressure roller, if left to stand in the pressed position, may be deformed. The drive gear may be damaged if the fusing unit is removed with the pressure roller in the pressed position.
- *5: If the machine is driven with the specified units left mounted on it, the developing roller and developer contact the photoconductor drum to damage it.
If the machine is driven with the developing units/Y,M,C left mounted on it, the developing roller, which is yet to be charged, is driven, so that toner may scatter around.

### 5.19.11 Adjustment Data List

(1) Use

- To display the adjustment and setting value set in the main body.

### 5.19.12 Self-diag. (Full)

(1) Overview of self-diagnostic function

- Conducts diagnosis for the defective and replaced areas of memory and various boards in main body when a trouble code is output or a trouble such as main body activation failure occurs, and identifies the defective parts need to be replaced.
- The self-diagnostic function is divided into two functions, the "Self-diag. (Full)" function and the "Self-diag. (Individual)" function.
- "Self-diag. (Full)" diagnoses all items together, those are diagnosed individually with "Self-diag. (Individual)", and identifies the area where trouble occurred and the parts need to be replaced. The diagnosis result is displayed as [OK] or [NG], and if [NG] is detected, the [Error Code] key will be displayed on the [Full Self Diagnostic] screen. Touch the [Error Code] key to display the [Error Code] screen.
- "Self-diag. (Individual)" diagnoses each item individually, and identifies the area where trouble occurred. The diagnosis result is displayed as [OK] or [NG].

(2) Use
- To diagnose all items together, those are diagnosed individually with "Self-diag. (Individual)", and identify the area where trouble occurred and the parts need to be replaced.
- When a trouble code is displayed, by performing "Self-diag. (Full)", troubles on the hardware device can be diagnosed.
- The diagnosis result is displayed as [OK] or [NG], and if [NG] is detected, the [Error Code] key will be displayed on the [Full Self Diagnostic] screen. Touch the [Error Code] key, to display the [Error Code List] screen.
Self-diag. (Full) Flow

Example of Self-diag. (Full) screen

Example of Error Code screen

NOTE
A sample of screen showing all error codes. Only displays the detected error codes. (This sample shows a case that all errors are detected.)
Self-diagnostic item

| No. | Check item |  |
| :---: | :---: | :---: |
| 1 | Prog. device | R/W Check |
|  |  | MFP FW checksum |
|  |  | Partition check |
| 2 | SPI Check | R/W Check |
| 3 | HDD Check | SATA ID verification |
|  |  | I/F Test |
|  |  | Memory Check |
|  |  | R/W Check |
|  |  | S.M.A.R.T diag. |
|  |  | Partition check |
| 4 | Sys/Image mem check | WORK0 |
|  |  | FILE0 |
|  |  | FILE1 |
|  |  | WORK1 |
|  |  | FILE2 |
|  |  | FILE3 |
|  |  | FILE4 |
|  |  | FILE5 |
| 5 | Various USB Check | USB Device |
|  |  | Keyboard* |
|  |  | USB Memory* |
| 6 | CCD Board Check | I/P Image Bus Check |
|  |  | Line RAM Comparison |
| 7 | DF Board Check | MINET communication check |
| 8 | FAX Board Check | Line1 |

- *: The item can be diagnosed with Self-diag. (Individual) only.

NOTE

- It takes approx. 200 seconds for check if all items are OK.
- If trouble codes (C6\#\#\#, C91\#\#, CE301, CE304) are displayed, the Self-diag. (Full) may not complete. In that case, finish the Selfdiag. (Full), and perform the troubleshooting against each trouble code.
- Configuration of DIMM, non-volatile memory, boards and HDD vary by models.
- When operation is disabled (screen frozen) during displaying the diagnosis result confirmation screen, turn OFF the main power switch to finish the diagnosis. Wait for 10 sec . or more, and turn ON the main power switch.
(3) Procedure (from SERVICE MODE menu)

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Full)].
3. Press the Start key to start the check procedure.
4. When the check procedure is completed, the result of the diagnosis is displayed for every item. (OK/NG)
5. After completing the Self-diag. (Full), load A4/A4S paper in the manual bypass tray, the [Printing] key will appear in the top area of the screen. If the self-diagnosis result report is required, touch the [Printing] key to print out the "Self-diagnosis result report.". If it is not required, go to the next step.
6. If [OK] is displayed for all diagnosis items, press the [OK] key.

NOTE

- If a trouble code is detected during executing the Self-diag. (Full), the trouble screen will be displayed, and the Self-diag. (Full) will be interrupted. When the trouble screen is displayed, turn OFF the main power switch to finish the Self-diag. (Full). Then, turn ON the main power switch while pressing the power key to restart the Self-diag. (Full).
" The "Self-diagnosis result report." can be printed out after completing the Self-diag. (Full). (Printable even if NG is displayed)
- If there is no paper loaded on the manual bypass tray, the [Printing] key will not appear. Also, if any paper with a size other than A4/A4S is loaded, the [Printing] key will not appear.
Example of the self-diagnosis result report

(4) Procedure (from main power switch ON)

1. Turn the main power switch on while pressing the power key

- After a short beep sound is made once, release your hands from the power key.
- Wait to display the Self-diag. (Full) screen.

2. Display the self diagnosis screen. The following procedures (from SERVICE MODE menu) are same.
3. If $[O K]$ is displayed for all diagnosis items, turn OFF the main power switch.

NOTE

- If the self diagnosis (full) is started with the main power switch, you cannot call the Normal Mode or the Service Mode to the screen. To switch the mode, turn OFF the main power switch, and turn ON again after 10 seconds.

## (5) Procedure (when NG is detected)

1. If [NG] is detected, the [Error Code] key will be displayed on the diagnosis screen.
2. Touch the [Error Code] key to display the Error Code screen.
3. Check the displayed "Error Code", and turn OFF the main power switch.
4. Refer to the Service Manual [Error Code List], and perform the troubleshooting against each error code.
(6) Auto Execution of Self-diag. (Full)

- Set the [Switch NO.163] to [00000010] at [Bit assignment] and [02] at [HEX assignment] in [Service Mode] -> [System 2] -> [Software Switch Setting], so that the "Self-diag. (Full)" can be executed automatically when a "trouble code" occurred.
NOTE
- If this function is set on a client MFP, make sure to reset the settings after completing an operation check and troubleshooting.

## Sequence of Auto Execution of Self-diag. (Full)

1. Errors are detected. (Trouble codes are displayed, and the MFP stops.)
2. The MFP reboots automatically. (The MFP reboots automatically up to three times.)
3. The Self-diag. (Full) is executed automatically
4. After completing the Self-diag. (Full), the MFP stops with the self diagnosis screen being displayed. Perform the following procedures manually.
5. If [OK] is displayed for all diagnosis items, turn OFF the main power switch to finish the Self-diag. (Full).
6. If [NG] is displayed, touch the [Error Code] key to display the Error Code screen.
7. Check the displayed "Error Code", and turn OFF the main power switch.
8. Refer to the Service Manual [Error Code List], and perform the troubleshooting against each error code

NOTE

- The Self-diag. (Full) will be executed automatically only when the rank B/C trouble codes are detected. When the rank A trouble codes are detected, the MFP will stop with troubles being detected, and stand by.

### 5.19.13 Self-diag. (Individual)

## (1) Prog. device

(a) Use

- To check each item of the program storage device individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| R/W Check | Engagement failure | MFP board (MFPB) |
|  | Mounting failure | eMMC board (eMMC) |

## (b) Procedure

. Call the Service Mode to the screen.
. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [Prog. device].
3. Select the desired diagnosis key. (Two or more keys can be selected.)
[R/W Check] / [MFP FW checksum] / [Partition check]
4. Press the Start key to start the check procedure.
5. When the check procedure is completed, the check result will be displayed. (OK/NG)
6. If $[\mathrm{OK}]$ is displayed, press the [OK] key.
7. If $[N G]$ is displayed, execute the Self-diag. (Full).

## (2) SPI Check

(a) Use

- To check each item of the SPI individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| R/W Check | Mounting failure | MFP board (MFPB) |

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [SPI Check] -> [R/W Check].
3. Press the Start key to start the check procedure.
4. When the check procedure is completed, the check result will be displayed. (OK/NG)
5. If $[\mathrm{OK}]$ is displayed, press the [OK] key.
6. If [NG] is displayed, execute the Self-diag. (Full).

## (3) HDD Check

(a) Use

- To check each item of the HDD individually.

| Diagnosis item | Reason of error | Relevant parts |
| :---: | :---: | :---: |
| SATA ID verification | SATA board (engagement/mounting failure) | HDD cable <br> HDD <br> SATA board <br> MFP board (MFPB) |
|  | SPI for SATA (data failure) |  |
| I/F Test | HDD error | HDD cable HDD <br> SATA board MFP board (MFPB) |
| Memory Check |  |  |
| R/W Check |  |  |
| S.M.A.R.T diag. |  |  |
| Partition check |  |  |

## (b) Procedure

1. Call the Service Mode to the screen
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [HDD Check].
3. Select the desired diagnosis key. (Two or more keys can be selected.)
[SATA ID verification] / [I/F Test] / [Memory Check] / [R/W Check] / [S.M.A.R.T diag.] / [Partition check]
4. Press the Start key to start the check procedure.
5. When the check procedure is completed, the check result will be displayed. (OK/NG)
6. If $[\mathrm{OK}]$ is displayed, press the [OK] key.
7. If $[N G]$ is displayed, execute the Self-diag. (Full).
(4) Sys/Image mem check
(a) Use

- To check each item of the system memory and image memory individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| WORK0 | Engagement failure <br> Mounting failure <br> DRAM failure | DIMM board <br> WORK1 |
| FILE0 |  |  |
| FILE1 |  |  |

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :---: | :---: |
| FILE2 |  |  |
| FILE3 |  |  |
| FILE4 |  |  |
| FILE5 |  |  |

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [Sys/Image mem check].
3. Press the Start key to start the check procedure.
4. When the check procedure is completed, the check result will be displayed. (OK/NG)

NOTE

- If a trouble occurs on the memory, the self diagnosis may not complete. In that case, finish the Self-diag. (Full) forcibly, and perform the troubleshooting against each trouble code.
- Turning OFF the main power switch will finish the Self-diag. (Full) forcibly.

5. If [OK] is displayed, press the [OK] key.
6. If [NG] is displayed, execute the Self-diag. (Full).

## NOTE

- [NG] will also be displayed if the DIMM is not mounted. If an additional DIMM is not used, no error occurs even if [NG] is displayed, and no troubleshooting is required.

## (5) Various USB Check

(a) Use

- To check each item of the USB device individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| USB Device | USB interface (connection failure/parts defect) <br> HUB chip (connection failure/parts defect) | MFP board (MFPB) |
|  | SATA board (engagement/mounting failure) | SATA board (SATAB) |
|  | USB board (connection failure/parts defect) | USB board (USBB) |
|  | FAX board (connection failure/parts defect) | FAX board (FAXB) |
|  | Wireless LAN board (connection failure/parts <br> defect) | Wireless LAN board (PWB-WLAN) |
|  | Authentication unit (connection failure/device <br> defect) | Authentication unit |
| Keyboard* | Connection failure <br> Parts defect | USB keyboard |
| USB Memory* | Connection failure <br> Parts defect* | USB memory |

- *: The item can be diagnosed with Self-diag. (Individual) only.

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [Various USB Check].
3. Select the desired diagnosis key. (Two or more keys can be selected.) [USB Device] / [Keyboard] / [USB Memory]
4. Press the Start key to start the check procedure.
5. When the check procedure is completed, the check result will be displayed. (OK/NG)

## NOTE

- When checking [USB Device], [NG] will be displayed if the FAX board is mounted and the mounting settings are not enabled.
- When checking [Keyboard] or [USB Memory], [NG] will be displayed if no device is connected.

6. If [OK] is displayed, press the [OK] key.
7. If [NG] is displayed, perform the following procedures.

- If [NG] is displayed for [USB Device], execute the Self-diag. (Full).
- If [NG] is displayed for [Keyboard], perform the troubleshooting when NG is detected on keyboard.
- If [NG] is displayed for [USB Memory], perform the troubleshooting when NG is detected on USB memory.

## (6) CCD Board Check

(a) Use

- To check each item of the CCD board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| I/P Image Bus Check | Image bus failure | CCD sensor failure |
| Line RAM Comparison | Connection cable <br> CCD relay board <br> CCD board <br> MFP board (MFPB) |  |

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [CCD Board Check].
3. Select the desired diagnosis key. (Two or more keys can be selected.)
[I/P Image Bus Check] / [Line RAM Comparison]
4. Press the Start key to start the check procedure.
5. When the check procedure is completed, the check result will be displayed. (OK/NG) NOTE

- If a trouble occurs on the CCD board, the self diagnosis may not complete. In that case, finish the self diagnosis forcibly, and perform the troubleshooting against the trouble code C-6756.
- Turning OFF the main power switch will finish the self diagnosis forcibly.

6. If [OK] is displayed, press the [OK] key.
7. If [NG] is displayed, execute the Self-diag. (Full).

## (7) CIS Board Check

(a) Use

- To check each item of the CIS board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| I/P Image Bus Check | Image bus failure | CIS cable |
| Line RAM Comparison | CIS sensor failure | CIS module (CIS) <br> DS image processing board (DSIPB) |

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [CIS Board Check].
3. Select the desired diagnosis key. (Two or more keys can be selected.)
[I/P Image Bus Check] / [Line RAM Comparison]
4. Press the Start key to start the check procedure.
5. When the check procedure is completed, the check result will be displayed.

NOTE

- If a trouble occurs on the CIS board, the self diagnosis may not complete. In that case, finish the self diagnosis forcibly, and perform the troubleshooting against the trouble code C-6753.
- Turning OFF the main power switch will finish the self diagnosis forcibly.

6. If $[\mathrm{OK}]$ is displayed, press the [OK] key.
7. If $[\mathrm{NG}]$ is displayed, execute the Self-diag. (Full).
(8) DF Board Check
(a) Use

- To check each item of the ADF board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :---: | :--- | :--- |
| MINET communication check | ADF microcomputer communication failure | DF control board cable <br> DF control board <br> MFP Board |

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [DF Board Check] -> [MINET communication check].
3. Press the Start key to start the check procedure.
4. When the check procedure is completed, the check result will be displayed.
5. If $[\mathrm{OK}]$ is displayed, press the [OK] key.
6. If [NG] is displayed, execute the Self-diag. (Full).

## (9) DSIP Board Check

(a) Use

- To check each item of the DS image processing board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| Compress/exp check | ASIC image error | DS image processing board |
| Memory path check | Image memory error |  |

## (b) Procedure

. Call the Service Mode to the screen.
Touch [State Confirmation] -> [Self-diag. (Individual)] -> [DSIP Board Check].
3. Select the desired diagnosis key. (Two or more keys can be selected.)
[Compress/exp check] / [Memory path check]
4. Press the Start key to start the check procedure.
. When the check procedure is completed, the check result will be displayed. (OK/NG)
If $[\mathrm{OK}]$ is displayed, press the [OK] key.
. If [NG] is displayed, execute the Self-diag. (Full).

## (10) DSC Board Check <br> NOTE

- It will be displayed when the DSC board is mounted and enabled.
- [Service Mode] -> [System 2] -> [Option Board Status] -> [DSC1] or [DSC2]
(a) Use
- To check each item of the DSC board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| Image Bus Check (Front Side) | Engagement failure <br> Mounting failure | DSC board1 (DSCB/1) <br> MFP board (MFPB) |
| Image Bus Check (Back Side) | DSC board2 (DSCB/2) <br> MFP board (MFPB) |  |

## (b) Procedure

Call the Service Mode to the screen.
. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [DSC Board Check].
3. Select the desired diagnosis key. (Two or more keys can be selected.)
[Image Bus Check (Front Side)] / [Image Bus Check (Back Side)]
4. Press the Start key to start the check procedure.
5. When the check procedure is completed, the check result will be displayed. (OK/NG)

NOTE

- If a trouble occurs on the DS image processing board, the self-diagnosis may not complete. In that case, turn OFF the main power switch, disconnect power cord from the outlet, and remove the DS image processing board from the MFP board.
- Execute the [DSC Board Check] again.
- If the self-diagnosis complete, replace the DS image processing board.

6. If $[\mathrm{OK}]$ is displayed, press the $[\mathrm{OK}]$ key.
7. If [NG] is displayed, execute the Self-diag. (Full).

## (11) Fiery IF Board Check

(a) Use

- To check each item of the Fiery IF board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| Compress/exp check | Image bus failure | DS image processing board <br> Fiery IF board |

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] $\rightarrow$ [Fiery I/F Board Check] -> [Compress/exp check].
3. Press the Start key to start the check procedure.
4. When the check procedure is completed, the check result will be displayed. (OK/NG)
5. If $[\mathrm{OK}]$ is displayed, press the $[\mathrm{OK}]$ key.
6. If [NG] is displayed, execute the Self-diag. (Full).
(12) FAX Board Check
(a) Use

- To check each item of the FAX board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :---: | :---: | :---: |
| Line1 | Connection failure Parts defect | Connection cable FAX board/1 (FAXB/1) FAX expansion board |
| Line2 |  | Connection cable FAX board/2 (FAXB/2) FAX expansion board |
| Line3 |  | Connection cable FAX board/3 (FAXB/3) FAX expansion board |
| Line4 |  | Connection cable FAX board/4 (FAXB/4) FAX expansion board |

## (b) Procedure

1. Call the Service Mode to the screen.
. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [FAX Board].
Select the diagnosed line.
2. Select [Signal Send Test], [Signal Receive Test], or [NCU Test].

For the details of each item, refer to [Service Mode] -> [Test Mode] -> [Fax Test].
5. Select a test item.
6. Select the parameter you would like to test.
7. Press the Start key to start the check procedure.
8. If $[\mathrm{OK}]$ is displayed, press the $[\mathrm{OK}]$ key.
. If [NG] is displayed, execute the Self-diag. (Full).

## (13) MFP Board Check

(a) Use

- To check each item of the MFP board individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| Compress/exp check | ASIC image error | MFP board (MFPB) |
| O/P Image Bus Check | Image memory error |  |
| Memory path check | LAN interface error | LAN cable <br> MFP board (MFPB) |
| Ping Test $*$ |  | MFP |

- *: The item can be diagnosed with Self-diag. (Individual) only.

## (b) Procedure

## [Compress/exp check] / [O/P Image Bus Check] / [Memory path check]

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [MFP Board Check].
3. Select the desired diagnosis key. (Two or more keys can be selected.)
4. Press the Start key to start the check procedure.
5. When the check procedure is completed, the check result will be displayed. (OK/NG)
6. If $[\mathrm{OK}]$ is displayed, press the [OK] key.
7. If [NG] is displayed, execute the Self-diag. (Full).

## [Ping Test]

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [MFP Board Check] -> [Ping Test].
3. Select the input method according to the IP address of the destination. [Input IPv4 Address] / [Input IPv6 Address]
4. Input IP address of destination with the numeric keypad or the alphabet key.
5. Press the Start key to start the check procedure.
6. When the self diagnosis procedure is completed, the result will be displayed. (OK/NG)
7. If $[\mathrm{OK}]$ is displayed, press the [OK] key.
8. If [NG] is displayed, execute K.5.2.1 Troubleshooting when NG is displayed for Ping Test .

## (14) PCle Check

(a) Use

- To check each item of the PCle device individually.

| Diagnosis item | Reason of error | Relevant parts |
| :--- | :--- | :--- |
| PCle device check | PCle device error | MFP board (MFPB) |

## (b) Procedure

1. Call the Service Mode to the screen.
2. Touch [State Confirmation] -> [Self-diag. (Individual)] -> [PCle Check] -> [PCle device check].
3. Press the Start key to start the check procedure.
4. When the check procedure is completed, the check result will be displayed. (OK/NG)
5. If $[\mathrm{OK}]$ is displayed, press the [ OK ] key.
6. If [NG] is displayed, execute the Self-diag. (Full).

### 5.20 Test Mode

- To check the image on the printer side by letting the machine produce various types of test pattern. It also tests the printing operation in paper passage test, as well as the fax transmission.
- The machine searches through the paper sources in the order of tray 2 , tray 3 , tray 4 , and tray 1 for paper of the maximum size for printing.

### 5.20.1 Procedure for test pattern output

1. Touch [Test Mode] to display the test mode menu.
2. Touch the desired test pattern key.
3. Set up the desired functions and press the Start key.

### 5.20.2 Gradation Pattern

(1) Use

- To produce a gradation pattern.
- Used for checking gradation reproducibility.
(a) Test pattern

e.g.

SINGLE

- HYPER
- Gradation
- Cyan

## (2) Procedure

- Copies ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "1-Sided", 2-Side1 or 2-Side2
- 2-Side1: The same pattern is printed on both front and back sides
- 2-Side2: The front side is blank and the pattern is printed on the back side.
- Select "Gradation", Resolution or Error diffusion if HYPER has been selected.
- Select "600dpi" or 1200dpi.
- Select "12 Gradations", 24 Gradations or 256 Gradations.
- Select the color mode. "Cyan", Magenta, Yellow, Black (4PC), CMYK, 8Color, 4Color, Black (1PC)

## NOTE

- When 24 Gradations or 256 Gradations is selected, [8 Color] or [4 Color] is not selectable in color mode.

### 5.20.3 Halftone Pattern

(1) Use

- To produce a solid halftone pattern.
- Used for checking uneven density and pitch noise.
(a) Test pattern

e.g.

SINGLE

- HYPER
- Gradation
- Cyan
- Density: 128

## (2) Procedure

- Copies ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "Gradation", Resolution or Error diffusion if HYPER has been selected.
- Select "1-Sided", 2-Side1 or 2-Side2
- 2-Side1: The same pattern is printed on both front and back sides.
- 2-Side2: The front side is blank and the pattern is printed on the back side
- Select the color mode. Cyan", Magenta, Yellow, Black (4PC), Red, Green, Blue, CMYK, 3 Color, 4 Color, Black (1PC), MIX
- Select a printable area from [Full Bleed] or [Front Half].

## NOTE

- [Front Half] is selectable only for one-side printing.
- Type the density level. (0 to " 255 ")

### 5.20.4 Lattice Pattern

(1) Use

- To produce a lattice pattern.
- Used for checking fine line reproducibility and uneven density.
- A reverse pattern is also used to check for fine line reproducibility of white letters on a solid background.

## (a) Test pattern

e.g.

SINGLE

- FEET
- Cyan
- CD Width: 5
- FD Width: 5
- Density: 255
- Normal

## (2) Procedure

- Copies ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select "FEET" or HYPER.
- Select "Gradation", Resolution or Error diffusion if HYPER has been selected.
- Select "1-Sided", 2-Side1 or 2-Side2.
- 2-Side1: The same pattern is printed on both front and back sides.
- 2-Side2: The front side is blank and the pattern is printed on the back side.
- Select the color mode. Cyan", Magenta, Yellow, Black (4PC), Red, Green, Blue, CMYK, 3 Color, 4 Color, Black (1PC)
- Enter CD width and FD width. (0 to 191 dots)
- Type the density level. (0 to "255")
- Select "Normal" or Reverse.
- Select "600 dpi" or 1200 dpi.

### 5.20.5 Solid Pattern

(1) Use

- To produce each of the C, M, Y, and K solid patterns.
- Used for checking reproducibility of image density.
(a) Test pattern

e.g.

SINGLE

- HYPER
- Gradation
- Density: 255

## (2) Procedure

- Copies ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "Gradation", Resolution or Error diffusion if HYPER has been selected.
- Type the density level. (0 to "255")

### 5.20.6 Color Sample

(1) Use

- To produce a color sample.
- Used for checking reproducibility of each of the different colors.
(a) Test pattern

e.g.

SINGLE

- HYPER
- Gradation

## (2) Procedure

- Copies ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- "HYPER" is automatically selected.
- Select "Gradation", Resolution or Error diffusion if HYPER has been selected.
- Produce 12-gradation-level patches of $\mathrm{C}, \mathrm{M}, \mathrm{Y}, \mathrm{K}, \mathrm{R}, \mathrm{G}$, and B, and a patch of each of the 12 reference colors in the hue circle with lightness and saturation corrected.

### 5.20.7 8 Color Solid Pattern

(1) Use

- To produce an 8-color solid pattern.
- Used for checking color reproducibility and uneven density of each color.
(a) Test pattern

e.g.
- SINGLE
- HYPER
- Gradation
- Density: 255
(2) Procedure
- Copies ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "Gradation", Resolution or Error diffusion if HYPER has been selected.
- Type the density level. (0 to "255")

### 5.20.8 CMM pattern

(1) Use

- To produce a CMM (Color Management Module) pattern.
- Used to check color difference depending on the places where output is made.
(a) Test pattern

e.g.

Error diffusion

## (2) Procedure

- Copies is always " 1 ".
- Select "Error diffusion", Gradation or Resolution.
- Select an angle from among "0 degrees", 90 degrees, 180 degrees, and 270 degrees.

### 5.20.9 Paper Passage Test

(1) Use

- To test the printing operation in paper passage test.
- Use to check the printing operation in paper passage test from each paper source.
(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Test Mode] -> [Paper Passage Test].
3. Select either [Yes] or [No] for the pattern print option.
4. Touch [Select Tray] and select the paper feed tray to be tested.
5. Touch [Paper Type] and select a paper type.
6. Press the Start key to start the paper passage test.
7. Pressing the Stop key will stop operation.

### 5.20.10 Fax Test-Signal Send Test

- It will be displayed only when optional FAX kit FK-514 is mounted.
- Specifiable for each line when there are multiple fax lines
(1) Use
- Image information signals, control signals and DTMF can be individually output.
- Signal sounds are monitored by the monitor speaker.
(2) Procedure

1. Call the Service Mode to the screen.
2. Select $->$ [Test Mode] -> [FAX Test] -> [Fax Line Test].
3. Select a line, and touch the [Signal Send Test].
4. Select a test item.
5. Select the parameter you would like to test.
6. Press the [Start] key. (In order to move to another test, select the next test item after pressing the [Stop] key.) NOTICE

- Signal is output from pressing [Start] to pressing [Stop].
- To check Line 1, [Administrator Settings] -> [Fax Settings] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON".
- To check Line 2, [Administrator Settings] -> [Fax Settings] -> [Multi Line Settings] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON".
(a) V34 Main CH: Default setting
- 33600
(b) V34 Main CH: Setting range
- 2400 to 33600 (step: 2400)
(c) V8: Default setting
- CM
(d) V17: Default setting
- 14400bps
(e) V17: Setting item
- 14400bps
- 12000bps
- 9600bps
- 7200bps

## (f) V29: Default setting

- 9600bps
(g) V29: Setting item
- 9600bps
- 7200bps
(h) V27ter: Default setting
- 4800bps
(i) V27ter: Setting item
- 4800bps
- 2400bps
(j) V21
- No parameters
(k) PB: Default setting
- 0
(I) PB: Setting item
- 0 to 9, , \#, A, B, C, D
(m) DP: Default setting
- 0
(n) DP: Setting range
- 0 to 9
(o) Special Tone: Default setting
- 1100 Hz
(p) Special Tone: Setting item
- 1100 Hz
- 1300 Hz
- 1650 Hz
- 2100 Hz
(q) Optional Tone: Default setting
- 200 Hz
(r) Optional Tone: Setting range
- 200 to 4000 Hz (step: 100 Hz )
(s) PB Tone (High): Default setting
- 1209 Hz
(t) PB Tone (High): Setting item
- 1209 Hz
- 1336 Hz
- 1477 Hz
- 1633 Hz
(u) PB Tone (Low): Default setting
- 697 Hz
(v) PB Tone (Low): Setting item
- 697Hz
- 770Hz
- 852 Hz
- 941 Hz
(w) Pseudo Ring
- No parameters

### 5.20.11 Fax Test-Signal Receive Test

- It will be displayed only when optional FAX kit FK-514 is mounted.
- Specifiable for each line when there are multiple fax lines
(1) Use
- Check a signaling tone by connecting the machine to the line to output a test signal of the fax board.
- Signal sounds are monitored by the monitor speaker.
(2) Procedure

1. Call the Service Mode to the screen.
2. Select $->$ [Test Mode] -> [FAX Test] $->$ [Fax Line Test].
3. Select a line, and touch the [Signal Receive Test].
4. Select a test item.
5. Select the parameter you would like to test.
6. Press the [Start] key. (In order to move to another test, select the next test item after pressing the [Stop] key.)

## NOTICE

- Signal is output from pressing [Start] to pressing [Stop]
- To check Line 1, [Administrator Settings] -> [Fax Settings] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON".
- To check Line 2, [Administrator Settings] -> [Fax Settings] -> [Multi Line Settings] -> [Fax Line 2] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON".
- To check Line 3, [Administrator Settings] -> [Fax Settings] -> [Multi Line Settings] -> [Fax Line 3] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON"
- To check Line 4, [Administrator Settings] -> [Fax Settings] -> [Multi Line Settings] -> [Fax Line 4] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON".
- The status of testing or results of tests are shown in the title line as follows

| RCV | Waiting signals |
| :--- | :--- |
| OK/NG | Results of signal reception |

- The V. 34 signal does not appear at the signal receive test.
(a) V17: Default setting
- 14400bps
(b) V17: Setting item
- 14400bps
- 12000bps
- 9600bps
- 7200bps
(c) V29: Default setting
- 9600bps
(d) V29: Setting item
- 9600bps
- 7200bps
(e) V27ter: Default setting
- 4800 bps
(f) V27ter: Setting item
- 4800bps
- 2400bps
(g) V21
- No parameters
(h) PB: Default setting
- 0
(i) PB: Default setting
- 0 to $9,{ }^{*}, \#, A, B, C, D$
(j) Special Tone: Default setting
- 1100 Hz
(k) Special Tone: Setting item
- 1100 Hz
- 1300 Hz
- 2100 Hz

### 5.20.12 Fax Test-NCU TEST

- It will be displayed only when optional FAX kit FK-514 is mounted.
- Specifiable for each line when there are multiple fax lines
(1) Use
- To check the operation of NCU.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Select $->$ [Test Mode] -> [FAX Test] -> [Fax Line Test].
3. Select a line, and touch the [NCU Test].
4. Select a test item.
5. Press the [Start] key. (In order to move to another test, select the next test item after pressing the [Stop] key.)

NOTE

- When CML / CTL / TEL relay test is selected and the Start key is pressed, ON is displayed in the parameter and relay is turned to ON. When [Stop] is pressed, relay is turned OFF.
- When the DC-LOOP detection test is selected and Start key is pressed, $\mathrm{DT}=0001$ is shown in the title row in case of detecting the DC-LOOP. If not detected, $D T=0000$ is displayed.

| Contents of test | Device to be tested |
| :--- | :--- |
| CML Relay | IC201, IC202 |
| CTL Relay | RL201 |
| TEL Relay | RL501* |
| DC-LOOP Detect |  |
| Speaker |  |
| Outside Ring Send |  |
| Audio Response Send |  |

-     * RL501 mounts only the Japanese.

### 5.20.13 Fax Test-Dial Test

- Not used

### 5.20.14 Fax Test - Off-hook Test

- Not used
5.21 ADF

### 5.21.1 Original Stop Position

(1) Use

- To manually adjust the original stop position and the read position in each of the DF modes.
- When the result is Unable in the automatic adjustment of the original stop position.
(2) Procedure
(a) Sub Scanning Direction 1-Side

NOTE

- Before performing this adjustment, the feed zoom adjustment needs to be complete. I.5.21.8 Feed Zoom
- DF reading chart (for 1 -sided)

- DF reading chart (for Duplex)

- The difference in the widths of B between the chart and the copy sample should fall within the following target.

| Target | $0 \pm 2.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -4.0 mm to $+4.0 \mathrm{~mm}(1$ step: 0.1 mm$)$ |

1. Place the chart in the document feed tray.

- DF reading chart (for 1-sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up.

2. Make a full size copy of the chart.
3. Check that the difference in the widths of $B$ between the chart and the copy sample falls within the target.
4. Call the Service Mode to the screen.
5. Touch [ADF] -> [Original Stop Position].
6. Touch [Sub Scanning Direction 1-Side].
7. Enter the value from the 10-key pad. (Press the [+/-] key to change the $+/$ - code.)

- If the difference in the widths of $B$ is greater than the target, enter the [+] value.
- If the difference in the widths of $B$ is smaller than the target, enter the $[-]$ value.

8. Touch [Test Copy].
9. Select the tray loading paper for the test copy.
10. Place the chart in the document feed tray.
11. Press the start key, and check the difference in the width B between the chart and the discharged copy sample.
12. Touch [END] twice.
13. Touch [Exit] on the Service Mode screen.
14. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

## (b) Sub Scanning Direction 2-Side

NOTE
" Before performing this adjustment, the "feed zoom" adjustment and the "FD-Mag. Adj. (B)" adjustment need to be complete. I.5.21.8 Feed Zoom FD-Mag. Adj. (B)

- DF reading chart (for 1 -sided)

- DF reading chart (for Duplex)

- The difference in the widths of B between the chart and the copy sample should fall within the following target.

| Target | $0 \pm 2.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -4.0 mm to $+4.0 \mathrm{~mm}(1 \mathrm{step}: 0.1 \mathrm{~mm})$ |

[^37]10. Touch [2].
11. Touch [2-sided -> 2 -sided].
12. Place the chart in the document feeding tray.
13. Press the start key, and check the difference in the width B between the chart and the discharged copy sample.
14. Touch [END] twice.
15. Touch [Exit] on the Service Mode screen.
16. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
(c) Main Scanning (Front)

- DF reading chart (for 1-sided)

- DF reading chart (for Duplex)

- The difference in the widths of A between the chart and the copy sample should fall within the following target.

| Target | $0 \pm 2.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -4.4 mm to $+4.4 \mathrm{~mm}(1$ step: 0.1 mm$)$ |

1. Place the chart in the document feed tray.

- DF reading chart (for 1-sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up.

2. Make a full size copy of the chart.
3. Check that the difference in the widths of A between the chart and the copy sample falls within the target.
4. Call the Service Mode to the screen.
5. Touch [ADF] -> [Original Stop Position].
6. Touch [Main Scanning (Front)].
7. Enter the value from the 10-key pad. (Press the [+/-] key to change the $+/-$ code.)

- If the difference in the widths of $A$ is greater than the target, enter the [+] value.
- If the difference in the widths of $A$ is smaller than the target, enter the $[-]$ value.

8. Touch [Test Copy].
9. Select the tray loading paper for the test copy.
10. Place the chart in the document feeding tray.
11. Press the start key, and check the difference in the width $A$ between the chart and the discharged copy sample.
12. Touch [END] twice.
13. Touch [Exit] on the Service Mode screen.
14. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
(d) Main Scanning (Back)

- DF reading chart (for 1-sided)

- DF reading chart (for Duplex)

- The difference in the widths of A between the chart and the copy sample should fall within the following target.

| Target | $0 \pm 2.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | -4.4 mm to $+4.4 \mathrm{~mm}(1$ step: 0.1 mm$)$ |

1. Place the chart in the document feed tray (Set the chart with its blank side facing upward).

- DF reading chart (for 1 -sided): with the blank side facing up.
- DF reading chart (for Duplex): with the first side facing up.

2. Make a full size copy of the chart.
3. Check that the difference in the widths of $A$ between the chart and the copy sample falls within the target
4. Call the Service Mode to the screen.
5. Touch [ADF] -> [Original Stop Position].
6. Touch [Main Scanning (Back)].
7. Enter the value from the 10-key pad. (Press the [+/-] key to change the $+/-$ code.)

- If the difference in the widths of $A$ is greater than the target, enter the [+] value.
- If the difference in the widths of $A$ is smaller than the target, enter the $[-]$ value.

8. Touch [Test Copy].
9. Select the tray loading paper for the test copy.
10. Touch [2].
11. Touch [2-sided -> 2-sided].
12. Place the chart in the document feeding tray.
13. Press the start key, and check the difference in the width A between the chart and the discharged copy sample.
14. Touch [END] twice.
15. Touch [Exit] on the Service Mode screen.
16. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

### 5.21.2 Registration Loop Adj.

(1) Use

- To adjust the length of the loop to be formed in paper before the registration rollers.
- When an original misfeed or skew occurs.
(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Registration Loop Adj].
3. Select either [1-Side] or [Second Side] for the adjustment.
4. Touch clear and change the setting value using the $10-\mathrm{key}$ pad. (Press the [+/-] key to change the $+/-$ code.)

The amount of loop increases by the amount of positive (+) value and decreases by the amount of negative (-) value.
5. Touch [END].
6. Touch [Exit] on the Service Mode screen.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

## (3) Default setting

- 0

## (4) Setting range

- -5 mm to +5 mm (in 1 mm increments)

### 5.21.3 Auto Stop Position Adjustment

(1) Use

- To automatically adjust the read position for the Sub Scanning Direction.
- To check skew feed.
- When DF has been replaced.
- When CIS module has been replaced.

## NOTE

" Before performing this adjustment, the "FD-Mag. Adj. (F)" adjustment and "FD-Mag. Adj. (B)" adjustment needs to be complete. I.5.21.8 Feed Zoom I.5.21.12 FD-Mag. Adj. (B)

## (2) Procedure

(a) Sub Scanning Direction 1-Side

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Auto Stop Position Adjustment].
3. Touch [Sub Scanning Direction 1-Side].
4. Place the chart in the document feed tray.

- DF reading chart (for 1-sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up.

5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

## NOTE

If the result is [Unable]:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position]. I.5.21.1 Original Stop Position
(b) Sub Scanning Direction 2-Side

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Auto Stop Position Adjustment].
3. Touch [Sub Scanning Direction 2-Side].
4. Place the chart in the document feed tray.

- DF reading chart (for 1-sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up.

5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

## NOTE

If the result is [Unable]:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position]. I.5.21.1 Original Stop Position
(c) Main Scanning (Front)

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Auto Stop Position Adjustment].
3. Touch [Main Scanning (Front)].
4. Place the chart in the document feed tray.

- DF reading chart (for 1 -sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up.

5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON. NOTE
If the result is [Unable]:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position]. I.5.21.1 Original Stop Position
(d) Main Scanning (Back)

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Auto Stop Position Adjustment].
3. Touch [Main Scanning (Back)].
4. Place the chart in the document feed tray.

- DF reading chart (for 1 -sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up

5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

## NOTE

If the result is [Unable]:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position]. I.5.21.1 Original Stop Position

### 5.21.4 Paper Passage

(1) Use

- To check for paper passage through the DF in each of the DF modes.
- Used for checking the document path for any abnormal condition when a document misfeed occurs.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Paper Passage].
3. Select a paper passage mode to be tested from [1-Sided No Detect], [1-Sided Mixed Org.] or [2-Sided].
4. Set the original in the feed tray.
5. The Start key changes from orange to blue.
6. Press the Start key. The operation starts.

NOTE

- After starting the operation by pressing the Start key, if the Start key is pressed during the operation, the operation will be suspended.
Then, if the Start key is pressed again during the suspension, the operation will be resumed.
- If the Stop key is pressed during the test operation, the test will be forced to end.
- If there is no Original set in the feed tray, the Start key will not work.
- All Originals set in the feed tray are passed through. Upon the completion of all Originals passed through, the paper through test ends.

### 5.21.5 Sensor Check

(1) Use

- To check sensors on the paper path.
- When a document misfeed occurs.
(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Sensor Check].
3. Operate the sensor to check by using paper or the like, and check the screen display. (Paper detected: 1, No paper detected: 0)
(3) Sensor check screen (bizhub C368/C308/C258)

- This is only typical screen which may be different from what are shown on each individual main body.

## (4) Sensor check list

| Symbol <br> (DF-704/ <br> DF-629) | Panel display | Part/signal name | Operation characteristics/panel display |  |
| :---: | :--- | :--- | :--- | :---: |
| PS14/PS13 | Feed Open\&Close | Upper door sensor | 1 | 0 |
| PS15/- | Open/Close Guide under <br> CIS | CIS cover sensor *1 | Open |  |
| PS3/PS3 | Registration Sensor | Registration sensor | Open | Close |
| PS2 /PS2 | After Separate | After separate sensor | Paper present | Paper not present |

| - | Fan Lock Detection | - | - | - |
| - | Temp-Inside | - | - |  |

### 5.21.6 Original Tray Width

(1) Use

- To set the values of maximum (A3 position) and minimum (B6 position) widths on the restriction plate positional volume.
- When an original misfeed occurs.
- When an original size detection error occurs.
- When the DF control board has been replaced.
- When the document width sensor has been replaced. (bizhub C368/C308/C258)
- When the restriction plate positional volume has been replaced. (bizhub C658/C558/C458)
(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Original Tray Width].

3. Set the A 3 paper [1] on the original feed tray, and widen the width across the edge guides [2] by sliding them to the "A3" position.
4. Touch [Max. Width].
5. Press the Start key.
6. OK is displayed when the adjustment has been completed.
7. Set the B6 paper [1] on the original feed tray, and narrow the width across the edge guides [1] by sliding them to the " B 6 " position.

[1]
8. Touch [Min. Width].
9. Press the Start key.
10. OK is displayed when the adjustment has been completed.
11. Touch [END].
12. Touch [Exit] on the Service Mode screen.
13. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

NOTE
If the result is NG:

- Possible causes includes failure or wrong wiring of the document width sensor and failure of the DFCB. (bizhub C368/C308/ C258)
- Possible causes includes failure or wrong wiring of the restriction plate positional volume and failure of the DFCB. (bizhub C658/C558/C458)

### 5.21.7 Read Pos Adj

(1) Use

- To adjust the original read position.
- When the scanner home sensor have been replaced.
(2) Read Pos Adj
(a) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Read Pos Adj].
3. Touch [Read Pos Adj].
4. Touch [C].
5. Enter the value using the [+] / [-] keys.

- Set the value to a positive number to move the stop position of the LED exposure unit to the right when viewed from the front.
- Set the value to a negative number to move the stop position of the LED exposure unit to the left when viewed from the front.

6. Touch [END].
7. Touch [Exit] on the Service Mode screen.
8. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
(b) Default setting

- Intrinsic values (adjusted at the factory)
(c) Setting range
- -73 through +73
(3) Auto Adjust
(a) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Read Pos Adj].
3. Touch [Auto Adjust].
4. Open the DF.

5. Place the DF reading chart [1] so that a triangular mark may become the original glass side (downward) and the pointed tip of the triangle points toward the black sheet on the left side.
6. Press the Start key.

## NOTE

- Be sure that the DF reading chart is in position.
- Keep the document feeder open while making the adjustment.
- When the edge deviation at DF reading after carrying out this adjustment becomes larger, conduct the " I.5.21.1 Original Stop Position".
. Make sure that the result is OK.

8. Touch [END].
9. Touch [Exit] on the Service Mode screen.
10. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

## NOTE

If the result is [Unable]:

- Check that the chart is in the correct place.
- Make the adjustment on the [Original Stop Position] screen.
I.5.21.1 Original Stop Position

### 5.21.8 Feed Zoom

(1) Use

- To adjust the feed zoom in the front side feeding direction on the DF.
- When DF has been replaced.

## (2) Procedure

(a) Orig. Feed Zoom Ad

- DF reading chart (for 1-sided)

- DF reading chart (for Duplex)

- The difference in the widths of $C$ between the chart and the copy sample should fall within the following target.

| Target | $0 \pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | $-2.00 \%$ to $+2.00 \%$ (1 step: $0.1 \%$ ) |

1. Place the chart in the document feed tray.

- DF reading chart (for 1 -sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up.

2. Make a full size copy of the chart.
3. $C$ width on the chart and one on the copy sample are measured and adjusted so that the difference of $C$ width satisfies the target shown below.
4. Call the Service Mode to the screen.
5. Touch [ADF] -> [Feed Zoom].
6. Touch [Orig. Feed Zoom Ad].
7. Enter the value using the $[+] /[-]$ keys

- If the difference in the widths of C is greater than the target, enter the - value.
- If the difference in the widths of $C$ is smaller than the target, enter the + value.

8. Touch [Test Copy].
9. Select the tray loading paper for the test copy.
10. Press the start key, and check the difference in the width $C$ between the chart and the discharged copy sample.
11. Touch [END] twice.
12. Touch [Exit] on the Service Mode screen.
13. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
(b) Auto Adjust
14. Call the Service Mode to the screen.
15. Touch [ADF] -> [Feed Zoom].
16. Touch [Auto Adjust].
17. Place the chart in the document feed tray (with the side having an arrow facing up).
18. Press the Start key.
19. Make sure that result is OK.
20. Touch [SET] and then [END].
21. Touch [Exit] on the Service Mode screen.
22. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

### 5.21.9 Scanning Light Adjustment

(1) Use

- To adjust the scanning light of DF.
- Used for adjusting the difference in the scanning lights between scanning from the original glass and scanning from the DF original glass.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Scanning Light Adjustment].
3. Select a color by pressing [Red], [Green], or [Blue].
4. Press the value using the $[+] /[-]$ key.

NOTE

- It is recommended that the scanning light adjustment should be made by the same steps for all the three colors of red, green, and blue.

5. Touch [END].
6. Touch [Exit] on the Service Mode screen.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

## (3) Setting range

- -4 to +4 (Step: 1)

### 5.21.10 Mixed original size adjustment

(1) Use

- To adjust paper length detection accuracy used during paper feed in DF mixed original mode.
- To set the threshold for each size detection based on the length detected when feeding standard sizes (A4S).
- When the DF control board has been replaced.

## (2) Procedure

## NOTE

- Before performing this adjustment, the feed zoom adjustment needs to be complete. Feed Zoom

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Mixed original Size adjustment].
3. Place the chart in the document feed tray.
4. Press the Start key.
5. Make sure that result is OK. Then, touch [SET].
6. Touch [END].
7. Touch [Exit] on the Service Mode screen.
8. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

### 5.21.11 Home Read Position Adjust

(1) Use

- When image failure occurs due to the dirty back side shading shaft on the DF, use this function to adjust the home position of the shading shaft and to change a shading reference plate.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Home Read Position Adjust].
3. Press the value using the $[+] /[-]$ key.
4. Touch [END].
5. Touch [Exit] on the Service Mode screen.
6. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.
(3) Default setting

- 0

## (4) Setting range

- -4 to +4 (Step: 1 )

### 5.21.12 FD-Mag. Adj. (B)

(1) Use

- To adjust the feed zoom in the back side feeding direction on the DF.
- When DF and CIS has been replaced.

## (2) Procedure

(a) Orig. Feed Zoom Ad

DF reading chart (for 1-sided)

DF reading chart (for Duplex)

- The difference in the widths of $D$ between the chart and the copy sample should fall within the following target.

| Target | $0 \pm 1.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | $-2.00 \%$ to $+2.00 \%$ (1 step: $0.1 \%$ ) |

1. Place the chart in the document feed tray.

- DF reading chart (for 1 -sided): with the blank side facing up.
- DF reading chart (for Duplex): with the first side facing up.

2. Make a full size copy of the chart.
3. D width on the chart and one on the copy sample are measured and adjusted so that the difference of D width satisfies the target shown below.
4. Call the Service Mode to the screen.
5. Touch [ADF] -> [FD-Mag. Adj. (B)].
6. Touch [Orig. Feed Zoom Ad].
7. Enter the value using the $[+] /[-]$ keys.

- If the difference in the widths of $D$ is greater than the target, enter the - value.
- If the difference in the widths of $D$ is smaller than the target, enter the + value.

8. Touch [Test Copy].
9. Select the tray loading paper for the test copy.
10. Touch [2].
11. Touch [2-sided -> 2-sided].
12. Press the start key, and check the difference in the width $D$ between the chart and the discharged copy sample.
13. Touch [END] twice.
14. Touch [Exit] on the Service Mode screen.
15. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
(b) Auto Adjust
16. Call the Service Mode to the screen.
17. Touch [ADF] -> [FD-Mag. Adj. (B)].
18. Touch [Auto Adjust].
19. Place the chart in the document feed tray.

- DF reading chart (for 1 -sided): with the blank side facing up.
- DF reading chart (for Duplex): with the first side facing up.

5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

### 5.21.13 Main Scanning Direction Zoom

(1) Use

- To adjust the feed zoom in the back side main scanning direction on the DF.
- When DF and CIS has been replaced.

## (2) Procedure

## (a) Auto Adjust

1. Call the Service Mode to the screen
2. Touch [ADF] -> [Main Scanning Direction Zoom].
3. Touch [Auto Adjust].
4. Place the chart in the document feed tray.

- DF reading chart (for 1 -sided): with the blank side facing up.
- DF reading chart (for Duplex): with the first side facing up.

5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
(b) Orig. Feed Zoom Ad

DF reading chart (for 1-sided)

DF reading chart (for Duplex)

- The difference in the widths of E between the chart and the copy sample should fall within the following target.

| Target | $0 \pm 2.0 \mathrm{~mm}$ |
| :--- | :--- |
| Setting range | $-1.00 \%$ to $+1.00 \%$ (1 step: $0.1 \%$ ) |

1. Place the chart in the document feed tray.

- DF reading chart (for 1 -sided): with the blank side facing up.
- DF reading chart (for Duplex): with the first side facing up.

2. Make a full size copy of the chart.
3. E width on the chart and one on the copy sample are measured and adjusted so that the difference of E width satisfies the target shown below.
4. Call the Service Mode to the screen.
5. Touch [ADF] -> [Main Scanning Direction Zoom].
6. Touch [Main scanning direction zoom adj].
7. Enter the value using the $[+] /[-]$ keys.

- If the difference in the widths of $E$ is greater than the target, enter the - value.
- If the difference in the widths of $E$ is smaller than the target, enter the + value.

8. Touch [Test Copy].
9. Select the tray loading paper for the test copy.
10. Touch [2].
11. Touch [2-sided -> 2-sided].
12. Press the start key, and check the difference in the width E between the chart and the discharged copy sample.
13. Touch [END] twice.
14. Touch [Exit] on the Service Mode screen.
15. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

### 5.21.14 Skew Measurement

(1) Use

- Measure the DF skew, adjust accordingly.

## (2) Procedure

(a) DFSkew (Front)

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Skew Measurement] -> [DFSkew (Front)].
3. Place the chart in the document feeding tray.

- DF reading chart (for 1-sided): with the side having an arrow facing up.
- DF reading chart (for Duplex): with the first side facing up.

4. Press the Start key.

- The measurement results are displayed on the panel.

5. Repeat procedures 3 to 4 five times.
6. Check the [Avg. Value] displayed on the panel is within the "specified range"

- Specified range: +/- $0.5 \%$

7. If the value of [Avg. Value] does not fall within the "specified range", repeat the adjustment.

- bizhub C658/C558/C458: I.13.1.2 Adjusting front side skew feed on dual scan document feeder
- DF-629: I.14.1.2 Adjusting front side skew feed on ADF
- DF-704: I.15.1.2 Adjusting front side skew feed on ADF
(b) DFSkew (Back)
- *1: It will be displayed only when dual scan document feeder is mounted.

1. Call the Service Mode to the screen.
. Touch [ADF] -> [Skew Measurement] -> [DFSkew (Back)].
2. Place the chart in the document feeding tray.

- DF reading chart (for Duplex): with the blank side facing up.
- DF reading chart (for Duplex): with the first side facing up.

4. Press the Start key.

- The measurement results are displayed on the panel.

5. Repeat procedures 3 to 4 five times.
6. Check the [Avg. Value] displayed on the panel is within the "specified range".

- Specified range: +/- 0.5 \%

7. If the value of [Avg. Value] does not fall within the "specified range", repeat the adjustment.

- bizhub C658/C558/C458: I.13.1.3 Adjusting back side skew feed on dual scan document feeder
- DF-704: I.15.1.3 Adjusting back side skew feed on ADF

### 5.21.15 ADF automatic Adjustment <br> NOTE

- It will be displayed when the firmware for MFP is Function version 3.0 or later and the firmware for ADF is ver.G00-30 or later.
- Use the DF reading chart (for Duplex).
- [2-Side] is displayed only when the dual scan document feeder is installed.

## (1) Skew Measurement

(a) Use

Measure the DF skew, adjust accordingly.
NOTE

- This function is the same as the setting below.
- [Service Mode] -> [ADF] -> [Skew Measurement]
- Be sure to perform [Sub Scanning] and then [Main Scanning] in this order if this is adjusted after [Skew Measurement].
- The adjustment of [Sub Scanning] and [Main Scanning] uses the result of [Skew Measurement].
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [ADF automatic Adjustment] -> [Skew Measurement].
3. Place the chart in the document feeding tray.

- DF reading chart (for Duplex): with the first side facing up.

4. Press the Start key.

- The measurement results are displayed on the panel.

5. Repeat procedures 3 to 4 five times.
6. Check the [Avg. Value] displayed on the panel is within the "specified range".

- Specified range: +/- 0.5 \%

7. If the value of [Avg. Value] does not fall within the "specified range", repeat the adjustment.

- I.13.1.2 Adjusting front side skew feed on dual scan document feeder
- I.13.1.3 Adjusting back side skew feed on dual scan document feeder
(2) Sub Scanning
(a) Use
- This adjustment is the same as performing [Auto Stop Position Adjustment] of the ADF sub scanning (1-Side and 2-Side) and [Auto Adjust] of [FD-Mag. Adj.] (1-Side and 2-Side) at the same time.
NOTE
- This function is the same as the setting below.
- [Service Mode] -> [ADF] -> [Auto Stop Position Adjustment] -> [Sub Scanning Direction 1-Side]
- [Service Mode] -> [ADF] -> [Auto Stop Position Adjustment] -> [Sub Scanning Direction 2-Side]
- [Service Mode] -> [ADF] -> [FD-Mag. Adj. (F)] -> [Auto Adjust]
- [Service Mode] -> [ADF] -> [FD-Mag. Adj. (B)] -> [Auto Adjust]
- Be sure to perform [Sub Scanning] and then [Main Scanning] in this order if this is adjusted after [Skew Measurement].
- The adjustment of [Sub Scanning] and [Main Scanning] uses the result of [Skew Measurement].
(b) Procedure

1. After measuring skew in [ADF] -> [ADF automatic Adjustment] -> [Skew Measurement], touch [Sub Scanning].
2. Place the chart in the document feeding tray.

- DF reading chart (for Duplex): with the first side facing up.

3. Press the start key.

- The measurement results are displayed on the panel.

4. Repeat procedures 2 to 3 five times.
5. Touch [Apply]
6. Exit the Service Mode.
7. Turn OFF the main power switch, wait for 10 sec ., then turn the switch ON.

## (3) Main Scanning

(a) Use

- This adjustment is the same as performing [I.5.21.3 (2) (c) Main Scanning (Front) / I.5.21.3 (2) (d) Main Scanning (Back)] of the ADF main scanning (1-Side and 2-Side) and [Auto Adjust] of [Main Scanning Direction Zoom] (1-Side and 2-Side) at the same time.
(b) Procedure

1. After measuring skew in [ADF] -> [ADF automatic Adjustment] -> [Sub Scanning], touch [Main Scanning].
2. Place the chart in the document feeding tray.

- DF reading chart (for Duplex): with the first side facing up.

3. Press the start key.

- The measurement results are displayed on the panel.

4. Repeat procedures 2 to 3 five times.
5. Touch [Apply].
6. Exit the Service Mode.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

### 5.21.16 Multi-Feed DetectionAdj

(1) Use

- To display the sensor value used for Multi feed detection sensor adjustment.
- Used after the optional Double feed detection Kit UK-501 is replaced.
(2) Procedure

. Open the top door of the reverse dual scan document feeder

2. Set the supplied adjustment sheet on the detection area of the multi feed detection sensor, then close the top door.
3. Press the Menu key to close the Paper Jam screen.
4. Touch [ADF] -> [Multi-Feed DetectionAdj.].
5. Press the start key.

- The measurement results are displayed on the panel.
- Check whether the Check Value falls between 3700 and 3800.

6. If the check result is out of the range, perform the following adjustment.
7. Remove the rear cover of DF.
G.7.2.2 Rear cover (dual scan document feeder)
8. Adjust the Check Value by turning the adjustment screw on the sensor control board, so that the value falls within 3,700 to 3,800 .

- Clockwise: The value will decrease.
- Counterclockwise: The value will increase.

## NOTE

- Be sure not to touch any elements other than the adjustment screw on the sensor control board.

### 5.22 FAX

- It will be displayed only when [Service Mode] -> [System 2] -> [Option Board Status] shows that FAX (circuit 1) is set to "Set".

### 5.22.1 Modem/NCU

(1) V34:1/2 : RX Max. Bit Speed
(a) Use

- To set the max. bit speed for reception in V.34.
(b) Default setting
- 33600 bps
(c) Setting range
- 2400 to 33600 bps (steps: 2400 bps)
(2) V34:1/2 : TX Max. Bit Speed
(a) Use
- To set the max. bit speed for transmission in V.34.
(b) Default setting
- 33600 bps
(c) Setting range
- 2,400 to $33,600 \mathrm{bps}$ (steps: 2,400 bps)
(3) V34:1/2 : Control CH Speed
(a) Use
- A bit speed of the control channel.
- The negotiation of $2400 / 1200$ is performed in the V. 34 start-up procedure.
(b) Default setting
- 1200 bps
(c) Setting item
- 1200 bps
- 2400 bps
(4) V34:1/2 : Max. SYMB Speed
(a) Use
- Maximum modulation speed (baud rate) of V. 34
- 3429 SYMB: 342933.6 k to 4.8 k
- 3200 SYMB: 320031.2 k to 2.4 k
- 3000 SYMB: 300028.8 k to 2.4 k
- 2800 SYMB: 2800
- 2400 SYMB: 2400
- The modulation speed of both sending and receiving change by change of setting.
- The upper limit value of V .34 maximum bit speed is determined.
- Normally you do not need to change the value. In case that a V. 34 error frequently occurs, you can attempt to set up 3000 SYMB and decrease the symbol rate, for instance.
(b) Default setting
- 3429 SYMB
(c) Setting item
- 2400 SYMB
- 2800 SYMB
- 3000 SYMB
- 3200 SYMB
- 3429 SYMB
(5) V34:2/2: V34 Points
(a) Use
- Select the optimal Eye Pattern in accordance with the line state obtained from V. 34 transmission training.
(b) Default setting
- Auto
(c) Setting item
- 16-Point
- 4-Point
(6) V17 Send Max Speed: TX Max. Speed
(a) Use
- To set the max. speed for transmission.
(b) Default setting
- V17-14400bps
(c) Setting item
- V17-14400 bps
- V17-12000bps
- V17-9600bps
- V17-7200bps
- V29-9600bps
- V29-7200bps
- V27-4800bps
- V27-2400bps
(7) V17 Send Max Speed: RX Max. Speed
(a) Use
- To set the max. speed for reception.
(b) Default setting
- V17-14400bps
(c) Setting item
- V17-14400 bps
- V29-9600bps
- V27-4800bps
(8) TxATT: PIX TxATT
(a) Use
- To set the output level of PIX TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.

## (9) TxATT: TONE/Procedure Signal TxATT

(a) Use

- To set the output level of TONE/Procedure Signal TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.
(10) TxATT: CED/ANSam TxATT
(a) Use
- To set the output level of CED/ANSam TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.
(11) TxATT: DTMF TxATT
(a) Use
- To set the output level of DTMF TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.
(12) Level: CD/SED ON Level
(a) Use
- To set reception signal sensitivity level.
- SED is not used.
(b) Default setting
- -48 dBm
(c) Setting range
- -48 to -33 dBm (steps: 5 dBm )
(13) Level: DTMF H-L Level Difference
(a) Use
- To set DTMF H-L level difference.
(b) Default setting
- 2.0 dB
(c) Setting range
- 1.0 to 4.0 dB (step: 0.5 dB )
(14) Cable EQL
(a) Use
- To correct the delay characteristics of the communication line.
(b) Default setting
- 0 Km
(c) Setting item
- 0 Km
- 1.8 Km
- 3.6 Km
- 7.2 Km

### 5.22.2 Network

(1) Network Setting 1: Receive Signal Detection Mode
(a) Use

- To set whether to detect the receive signal by the number of times or by time.
- Sets to "Time" when ringer can not be detected by the number.
(b) Default setting
- No. of Times
(c) Setting item
- No. of Times
- Time
(2) Network Setting 1: BUSY TONE Detection
(a) Use
- To set whether to use the Busy Tone detection or not.
(b) Default setting
- ON (Japan, US)
- OFF (EU)
(c) Setting item
- ON
- OFF
(3) Network Setting 1: No. of Times of Busy Tone Detection
(a) Use
- To set the number of times of Busy Tone detection.

(b) Default setting
- 2 (Japan, US)
- 3 (EU)
(c) Setting range
- 0 to 15 count (step: 1 count)

NOTE

- 0 time shows no detection is done.
(4) Network Setting 2: 1300 Hz Detection
(a) Use
- To set whether to use the 1300 Hz detection or not.
- Set this function to "ON" if the facsimile network (F-net) is to be used.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF
(5) Network Setting 2: Dial Tone Detection
(a) Use
- To set whether to use the Dial Tone detection or not.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF

## (6) Network Setting 2: DC-LOOP Check

(a) Use

- Checks the DC loop current before dialing.
- When the current is zero, an error occurs. (T.80)
- You can change the setting to be compliant to standards in other countries. In Japan, set this parameter to OFF.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF

## (7) Network Setting 2: min. RING OFF Time

(a) Use

- Minimum time to recognize ringer interval.

| $a \quad$ To avoid judging "a" as a ring-off time. | $b \quad$ Ring-off time |
| :--- | :--- | :--- |

(b) Default setting

- 200ms (Japan)
- Oms (US, EU)
(c) Setting range
- 0 to 1000 ms (step: 100 ms )
(8) Network Setting 2: Response Waiting Time
(a) Use
- To set the response waiting time.

| Response waiting timer $(55 \mathrm{sec})$ | Calling | Starts after dialing. Until CED is received. |
| :--- | :--- | :--- |

(b) Default setting

- 55 s
(c) Setting range
- 35 to 115 s (steps: 1 s)
(9) Network Setting 2: Pause Time
(a) Use
- The pause time for one pause key (pause between digits)
(b) Default setting
- 1 s
(c) Setting range
- 1 to 7 s (steps: 1 s)

### 5.22.3 System

(1) Display Setting: Closed area Rx
(a) Use

- To set whether or not to use the menu display for closed reception by using F-code for junk fax messages.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
(2) Display Setting: Re-Transmission
(a) Use
- To set whether to use the re-transmission function or not.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF

NOTE

- This setting is "OFF" when [Service Mode] -> [Billing Setting] -> [Management Function Choice] shows that key counter or vendor 2 is mounted.
(3) Display Setting: Compulsory Memory RX
(a) Use
- To set whether to use the compulsory memory reception function or not.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF

NOTE

- When turned "ON", the function permits selection of ON or OFF setting for the compulsory memory reception function that allows a document when received not to be printed automatically and, instead, to be printed through manual operation.
(4) Display Setting: Reject Calls
- Not used.
(5) Display Setting: Relay
(a) Use
- To set whether to use the relay function or not.
(b) Default setting
- ON (Japan)
- OFF (US, EU)
(c) Setting item
- ON
- OFF

## (6) Scan Setting: Frame Erasure HP

(a) Use

- To set the frame erasure size during reading.
- The four edges of the original are erased by the same width.

- Erases the outer lines to prevent black lines from appearing. Effective in the book transmission.
(b) Default setting
- 10 mm
(c) Setting item
- 5 mm
- 10 mm
- 15 mm

## (7) System Function: Fax Board Watchdog

(a) Use

- To set whether to enable watchdog by the fax board CPU or not.

| ON | Reset when hung up. |
| :--- | :--- |
| OFF | Keeps being hung up. |

(b) Default setting

- ON
(c) Setting item
- ON
- OFF

## (8) System Function: Fax BOOT Rewrite on ISW

(a) Use

- Required when a BOOT BLOCK program is upgraded or a hardware is changed.

(b) Default setting
- OFF
(c) Setting item
- ON
- OFF
(9) System Function: Error Code Display Time
(a) Use
- To set the communication error code display time.
(b) Default setting
- 20 s
(c) Setting item
- 10 to 250 s (step: 10 s)
- HOLD
(10) Communication Setting: Auto Rotation Send (LT)
(a) Use
- To set whether to rotate the Letter size original automatically or not for transmission.

| ON | Transmits in the A4 width. |
| :--- | :--- |
| OFF | Transmits in the A3 width. |

(b) Default setting

- ON
(c) Setting item
- ON
- OFF
(11) Communication Setting: Auto Rotation Send (A4T)
(a) Use
- To set whether to rotate the A4 size original automatically or not for transmission.

| ON | Transmits in the A4 width. |
| :--- | :--- |
| OFF | Transmits in the A3 width. |

(b) Default setting

- ON
(c) Setting item
- ON
- OFF
(12) Communication Setting: Error Page Resending
(a) Use
- To set whether to retransmit, after a communication error occurs, the document starting with the error page or all pages.

| Error Page | Retransmit the document starting with the error page |
| :--- | :--- |
| All Page | Retransmit the document all pages |

(b) Default setting

- Error Page
(c) Setting item
- Error Page
- All Page
(13) Communication Setting: Number of Redials (Error Page)
(a) Use
- To set the number of redials for the error page.
- Counted as a busy redial when the error page redial is busy.
(b) Default setting
- The default setting is different depending on the country.
(c) Setting range
- 0 to 7 (step: 1)

### 5.22.4 Fax File Format

## (1) Use

The following data can be initialized.

- All of the scan/fax documents stored in the box are erased.
- All of the boxes produced automatically by the F code are erased.
(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [FAX].
3. Touch [Fax File Format].
4. Press the Start key.
5. The Fax File Format is executed

### 5.22.5 Communication

(1) Protocol: V8 / V34 Protocol
(a) Use

- To set whether to use the V.8/V. 34 protocol or not.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF

## (2) Protocol: V17 EP TONE

(a) Use

- Whether the EP tone (Echo Protect: 2100 Hz ) is added to the top of the training signal.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
(3) Protocol: V29 EP TONE
(a) Use
- Whether the EP tone (Echo Protect: 2100 Hz ) is added to the top of the training signal.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF
(4) Protocol: V17 Selection Mode "-"
(a) Use
- V. 34 is not used when a dash (-) is added at the top of dial number.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF

## (5) Protocol: ANSam Send Time

(a) Use

- To set the transmission time for the V. 8 protocol signal ANSam.
- Usually not need to be changed.
(b) Default setting
- 4.0 s
(c) Setting range
- 1.0 to 5.5 s (step: 0.5 s )
(6) Int'I Comm. Function: Foreign Communication Function
(a) Use
- To set whether or not to use the mode that employs the number of DIS waiting times.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
(7) Int'I Comm. Function: No. of DIS Waiting Times at Foreign Communication
(a) Use
- To set the number of DIS waiting times.
(b) Default setting
- 1
(c) Setting item
- 1
- 2
(8) Int'I Comm. Function: V34 Speed
(a) Use
- To set the V. 34 international communication mode speed.
(b) Default setting
- 28800 bps
(c) Setting range
- 16800 to 33600 bps (step: 2400 bps)
(9) Int'I Comm. Function: V17 Speed
(a) Use
- To set the V. 17 international communication mode speed.
(b) Default setting
- 7200 bps
(c) Setting range
- 7200 to 14400 bps (step: 2400 bps)
(10) Int'I Comm. Function: V29 Speed
(a) Use
- To set the V. 29 international communication mode speed.
(b) Default setting
- 4800 bps
(c) Setting range
- 2400 to 9600 bps (step: 2400 bps)
(11) TIMER 1: T1
(a) Use

| T1 timer (T.30 standard) | Calling | Designate by the response waiting timer |
| :--- | :--- | :--- |
|  | Called | Starts after DIS is output. The waiting time until DCS is received. |
| Response waiting timer $(55 \mathrm{sec})$ | Calling | Starts after dialing. Until CED is received. |

(b) Default setting

- 35 s
(c) Setting range
- 30 to 90 s (step: 5 s)
(12) TIMER 1: DCS-TCF DELAY
(a) Use
- To set the delay time between DCS and TCF.

PMC: Post Message Command
(b) Default setting

- 80 ms
(c) Setting range
- 50 to 150 ms (step: 10 ms )
(13) TIMER 1: CED-DIS DELAY
(a) Use
- To set the delay time between CED and DIS.

(b) Default setting
- 80 ms
(c) Setting range
- 50 to 150 ms (step: 10 ms )
(14) TIMER 1: PIX-PMC DELAY
(a) Use
- To set the delay time between PIX and PMC.
PCED DIS $\quad$ PMC: Post Message Command
(b) Default setting
- 80 ms
(c) Setting range
- 50 to 150 ms (step: 10 ms )
(15) TIMER 2: EOL-EOL
(a) Use
- To set the transmission time between EOLs.

|  | EOL | 1 line data | EOL | 1 line data |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |

(b) Default setting

- 13.0 s
(c) Setting range
- 4.0 to 25.5 s (step: 0.5 s )
(16) TIMER 2: CFR-PIXWAIT
(a) Use
- Sets the waiting time from CFR is sent to the image signals are received.
- Radio fax on boats occasionally requires more than 6 sec.
(b) Default setting
- 6.0 s
(c) Setting range
- 6.0 to 25.5 s (step: 0.5 s)
(17) TIMER 2: EOM-PIXWAIT
(a) Use
- Waiting time to receive PIX before sending DIS when EOM is used.
- Some fax machines sends PIX without returning to Phase B in spite of EDM.
(b) Default setting
- 5.5 s
(c) Setting range
- 5.5 to 25.5 s (step: 0.5 s)
(18) TIMER 2: JM WAIT
(a) Use
- Time to continue outputting CM until receiving JM.
(b) Default setting
- 9.0 s
(c) Setting range
- 6.0 to 25.5 s (step: 0.5 s)
(19) Others: ECM Function
(a) Use
- Set whether or not to cancel reception ECM (error correction mode).
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
(20) Others: Frame Size at ECM TX
(a) Use
- To set the frame size at ECM transmission.
(b) Default setting
- 256
(c) Setting item
- 64
- 256
(21) Others: Coding Ability
(a) Use
- To set the coding ability.
- Effective to both sending and reception.
(b) Default setting
- MH/MR/MMR/JBIG
(c) Setting item
- MH
- MH/MR
- MH/MR/MMR
- MH/MR/MMR/JBIG

### 5.22.6 List Output

(1) Report Addition Information
(a) Use

- To set whether or not to add the diagnosis code or dial number to the communication journal.

| Diagnosis Code | The diagnosis code is printed on the communication journal. |
| :--- | :--- |

| Dial Number | The dial number is printed on the communication journal. |
| :--- | :--- |

(b) Default setting

- OFF
(c) Setting item
- Diagnosis Code
- Dial Number
- OFF

## (2) TX Result Report

(a) Use

- To set whether or not to add image to the transmission result report.
- Even if set to "With image" images are not attached at the time of the quick memory transmission and the manual transmission.
(b) Default setting
- With image
(c) Setting item
- With image
- Without image
(3) Protocol Trace Auto Output
(a) Use
- To set the timing for the protocol trace auto output.
(b) Default setting
- OFF
(c) Setting item
- Always
- Error
- OFF

### 5.22.7 Function Parameter

(1) Use

- Function parameters can be set through addressing.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch $[F A X]$.
3. Touch [Function Parameter].
4. Select the [Address] and then, enter the address using $[A]$ to $[F]$ or keypad.

- A Cursor is movable if 4 or is pushed.

5. Next, select [Data] and enter a value using binary numbers with keypad.
6. When the address and the value are correct, touch [Apply].
7. After the settings have been completed, touch [END].

## (3) Address parameter list

## NOTE

- When changing a value in this address parameter list, be sure to comply with the phone line standards of other countries.
- Depending on values that have been changed, compliance with the phone line standards of other countries may not be obtained.
- FAX setting (Address parameter list: for line 1)

## (4) PBX Connection Setting

## Use

- To be used for connecting to the PBX (private branch exchange) environment. NOTE
- Change the default setting of software DipSW226 bit7 for selecting "use or not use the function at Administrator to enable change of PBX function settings" from $0 \times 00$ (not use) to $0 \times 80$ (use).

## Procedure

1. Call the Service Mode to the screen.
2. Touch [FAX].
3. Touch [Function Parameter].
4. Select [Address], and enter the address using the [A] to [F] keys and the keypad.

- Press the 4 or $\Rightarrow$ key to move the cursor.

5. Select [Data], and enter binary numbers using the keypad.
6. Confirm the setting in [Address] and the entered numbers, then touch [Apply].
7. After the setting is completed, press [OK].

## Address parameter list <br> NOTE

- To change the value in this address parameter list, comply with the telephone line regulation for each country.
- In some cases, the changed value may not comply with the telephone line regulation for each country.

1. Set the following initial values for PBX settings. (In MFP: Settings premised on "PBX Dial Tone Detection Settings - Intermittent Sound") Additionally, check specifications for PBX and public lines adopted by users. If those specifications do not conform to the initial values, configure the function parameter again.

- Intermittent Sound setting: Initial value read from fax board
- Italic: Not available

By the way, if the PBX DT Detection is not to be used, disable the PBX DT Detection for each line (bit3: 0).
If OFF is selected for PBX Connection Setting from the Administrator screen, OFF will be applied to all lines.

|  | Function Parameter / Address |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Line 1 | Line 2 | Line 3 | Line 4 |  |
|  | 0x0e00f4 | 0x0e0204 | 0x0e0314 | 0x0e0424 |  |
| Tone Det. <br> Frequency | bit6: Tone type 0: Single 1: Dual <br> bit5: Reserve <br> bit4 bit3 bit2 bit1 bit0: PBX dial tone detection frequency pattern |  |  |  | Serial No. (setting value): Detection frequency pattern $\begin{aligned} & \text { 1: } 155+-65 \mathrm{~Hz} \\ & \text { 2: } 1155+-25 \mathrm{~Hz} \\ & \text { 3: } 375+-75 \mathrm{~Hz} \end{aligned}$ |
| Detection Time | Unit: 20 msec |  |  |  | $\begin{aligned} & \text { 4: } 400+-75 \mathrm{~Hz} \\ & 5 \cdot 425+-75 \mathrm{~Hz} \end{aligned}$ |
| Maximum ON Time |  |  |  |  | 6: $440+-75 \mathrm{~Hz}$ |
| Minimum ON Time | Unit: 20 msec |  |  |  | 7: $375+-100 \mathrm{~Hz}$ |
| Maximum OFF Time | Unit: 20 msec |  |  |  | $\begin{aligned} & 8: 400+-100 \mathrm{~Hz} \\ & \text { 9: } 425+-100 \mathrm{~Hz} \end{aligned}$ |
| Minimum OFF Time | Unit: 20 msec |  |  |  | 11: $375+-125 \mathrm{~Hz}$ |
| Wait Time | Unit: 1 sec |  |  |  | 12: $400+-125 \mathrm{~Hz}$ |
| Pre-PauseTime |  |  |  |  | $\begin{aligned} & \text { 13: } 425+-125 \mathrm{~Hz} \\ & 14: 440+-125 \mathrm{~Hz} \end{aligned}$ |
| Interr. Det. Time | Unit: 20 msec |  |  |  | 15: $375+-150 \mathrm{~Hz}$ |
| Detection Count |  |  |  |  | 16: $400+-150 \mathrm{~Hz}$ |
|  |  |  |  |  | 17: $425+-150 \mathrm{~Hz}$ |
|  |  |  |  |  | 18: $440+-150 \mathrm{~Hz}$ |
|  |  |  |  |  | 19: $465+-205 \mathrm{~Hz}$ |
|  |  |  |  |  | 20: 350+-25Hz (Dual) |
|  |  |  |  |  | 21: 620+-25Hz (Dual) |
|  |  |  |  |  | 22: $400+-75 \mathrm{~Hz}$ (Dual) |
|  |  |  |  |  | 23: $550+-100 \mathrm{~Hz}$ (Dual) |

| 1st Dial Tone Det. Sett. |  |  |  |  |  |  |  |  |  |  |  |  |  |

| Maximum ON Time |  |  |  |  | - | - | - | 0x32 | 0x32 | 0x1A |  |  |  |

- Continuous Sound setting: Initial value read from fax board
- Bold: Fixed value
- Italic: Not available

2. If a wrong dial is detected, the trouble code T-84 will be displayed.

| Function Parameter / Address |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Line 1 | Line 2 | Line 3 | Line 4 |  |
| $0 \times 0 \mathrm{e} 00 \mathrm{f} 2$ | $0 \times 0 \mathrm{e} 0202$ | $0 \times 0 \mathrm{e} 0312$ | $0 \times 0 \mathrm{e} 0422$ |  |

3. Enable PBX connection settings from [Administrator] - [PBX Connection Setting], all installed fax lines will be changed to "PBX

Connection". By the way, if it is found that only a specific line is connecting to a public line directly, the specific line will not be connect to a PBX environment (but to the public telephone network). Therefore, "1111" is to be select.

| Function Parameter / Address |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Line 1 | Line 2 | Line 3 | Line 4 |  |
| 0x0e011a | $0 x 0 \mathrm{e} 022 \mathrm{a}$ | $0 \times 0 \mathrm{e} 033 \mathrm{a}$ | $0 \times 0 \mathrm{e} 044 \mathrm{a}$ |  |

### 5.22.8 Initialization

(1) Use

- The following data can be initialized.

| Fax Function Parameter | The function set condition is initialized into the Factory Default condition. |
| :--- | :--- |
| Communication Journal Data | All of the Communication Journal is erased. |

NOTICE

- For the formats of the Abbreviated Registration Data, the Program Registration Data, The Group Registration Data, and the F-code Box Data, see " I.5.22.4 Fax File Format".

## (2) Procedure

1. Turn the main power switch ON.
2. Wait until the warm-up cycle is completed.

NOTE

- Wait until an alarm message, such as "Preparing fax/scan", disappears.
" Execution of "Initialization" before the warm-up cycle is completed may not be successful.

3. Call the Service Mode to the screen.
4. Touch [FAX].
5. Touch [Initialization].
6. Select data you want to initialize.

- Supplement: Two or more selections are possible for data.

7. Touch [Yes].
8. When a verification message is displayed, touch [Yes].
9. The data selected is initialized.

### 5.22.9 FAX Line Std. Setting

(1) Use

- Used to confirm fax settings.

NOTE

- If the following settings are changed, the settings from [Service Mode] -> [Fax Settings] -> [Network] and [System] are also changed.
FAX Line Std. Setting 1: Receive Signal Detection Mode, BUSY TONE Detection, No. of Times of Busy Tone Detection FAX Line Std. Setting 2: Dial Tone Detection, Pause Time, Response Waiting Time
FAX Line Std. Setting 3: Error Page Resending, Number of Redial
- If the following settings are changed, the settings from [Administrator Settings] -> [Fax Settings] -> [Line Parameter Setting] is also changed.
FAX Line Std. Setting 1:Number of RX Call Rings, Receive Time Interval Setting
FAX Line Std. Setting 4: Number of Redials, Redial Interval, Line Monitor Sound Volume (Send), Line Monitor Sound Volume (Receive)
(2) FAX Line Std. Setting-V17 RX Error
(a) Use
- This configures whether or not to lower the reception speed when reattempting to receive data after a receive error occurs.
(b) Procedure

1. Call the Service Mode to the screen.
2. Touch [FAX] -> [FAX Line Std. Setting] -> [FAX Line Std. Setting 3].
3. Select either [ON] or [OFF] for [V17 RX Error].

NOTE

- When this is set to [ON], the device will use V17 to receive data the next time after a receive error occurs.
(c) Default setting
- ON
(d) Setting item
- ON
- OFF

### 5.23 FAX setting (Line2, Line 3, Line 4)

- It will be displayed only when [Service Mode] -> [System 2] -> [Option Board Status] shows that FAX (circuit 2) is set to "Set".

- It will be displayed only when [Service Mode] -> [System 2] -> [Option Board Status] shows that FAX (circuit 3) is set to "Set".

- It will be displayed only when [Service Mode] -> [System 2] -> [Option Board Status] shows that FAX (circuit 4) is set to "Set".

### 5.23.1 Modem/NCU

(1) V34:1/2 : RX Max. Bit Speed
(a) Use

- To set the max. bit speed for reception in V.34.
(b) Default setting
- 33600 bps
(c) Setting range
- 2,400 to $33,600 \mathrm{bps}$ (steps: $2,400 \mathrm{bps}$ )
(2) V34:1/2 : TX Max. Bit Speed
(a) Use
- To set the max. bit speed for transmission in V.34.
(b) Default setting
- 33600 bps
(c) Setting range
- 2,400 to $33,600 \mathrm{bps}$ (steps: 2,400 bps)
(3) V34:1/2 : Control CH Speed
(a) Use
- A bit speed of the control channel.
- The negotiation of $2400 / 1200$ is performed in the V. 34 start-up procedure.
(b) Default setting
- 1200 bps
(c) Setting item
- 1200 bps
- 2400 bps
(4) V34:1/2 : Max. SYMB Speed
(a) Use
- Maximum modulation speed (baud rate) of V. 34
- 3429 SYMB: 342933.6 k to 4.8 k
- 3200 SYMB: 320031.2 k to 2.4 k
- 3000 SYMB: 300028.8 k to 2.4 k
- 2800 SYMB: 2800
- 2400 SYMB: 2400
- The modulation speed of both sending and receiving change by change of setting.
- The upper limit value of V .34 maximum bit speed is determined.
- Normally you do not need to change the value. In case that a V. 34 error frequently occurs, you can attempt to set up 3000 SYMB and decrease the symbol rate, for instance.
(b) Default setting
- 3429 SYMB
(c) Setting item
- 2400 SYMB
- 2800 SYMB
- 3000 SYMB
- 3200 SYMB
- 3429 SYMB
(5) V34:2/2: V34 Points
(a) Use
- Select the optimal Eye Pattern in accordance with the line state obtained from V. 34 transmission training.
(b) Default setting
- Auto
(c) Setting item
- 16-Point
- 4-Point
(6) V17 Send Max Speed: TX Max. Speed
(a) Use
- To set the max. speed for transmission.
(b) Default setting
- V17-14400bps
(c) Setting item
- V17-14400 bps
- V17-12000bps
- V17-9600bps
- V17-7200bps
- V29-9600bps
- V29-7200bps
- V27-4800bps
- V27-2400bps
(7) V17 Send Max Speed: RX Max. Speed
(a) Use
- To set the max. speed for reception.
(b) Default setting
- V17-14400bps
(c) Setting item
- V17-14400 bps
- V29-9600bps
- V27-4800bps
(8) TxATT: PIX TxATT
(a) Use
- To set the output level of PIX TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.

## (9) TxATT: TONE/Procedure Signal TxATT

(a) Use

- To set the output level of TONE/Procedure Signal TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.
(10) TxATT: CED/ANSam TxATT
(a) Use
- To set the output level of CED/ANSam TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.
(11) TxATT: DTMF TxATT
(a) Use
- To set the output level of DTMF TxATT.
- Directly sets modem. There are no external attenuator.
(b) Procedure
- The setting value are different depending on the country.
(12) Level: CD/SED ON Level
(a) Use
- To set reception signal sensitivity level.
- SED is not used.
(b) Default setting
- -48 dBm
(c) Setting range
- -48 to -33 dBm (steps: 5 dBm )
(13) Level: DTMF H-L Level Difference
(a) Use
- To set DTMF H-L level difference.
(b) Default setting
- 2.0 dB
(c) Setting range
- 1.0 to 4.0 dB (step: 0.5 dB )
(14) Cable EQL
(a) Use
- To correct the delay characteristics of the communication line.
(b) Default setting
- 0 Km
(c) Setting item
- 0 Km
- 1.8 Km
- 3.6 Km
- 7.2 Km

### 5.23.2 Network

(1) Network Setting 1: Receive Signal Detection Mode
(a) Use

- To set whether to detect the receive signal by the number of times or by time.
- Sets to "Time" when ringer can not be detected by the number.
(b) Default setting
- No. of Times
(c) Setting item
- No. of Times
- Time
(2) Network Setting 1: BUSY TONE Detection
(a) Use
- To set whether to use the Busy Tone detection or not.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF
(3) Network Setting 1: No. of Times of Busy Tone Detection
(a) Use
- To set the number of times of Busy Tone detection.

(b) Default setting
- 0 times
(c) Setting range
- 0 to 15 count (step: 1 count)

NOTE

- 0 time shows no detection is done.
(4) Network Setting 2: 1300 Hz Detection
(a) Use
- To set whether to use the 1300 Hz detection or not.
- Set this function to "ON" if the facsimile network (F-net) is to be used.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF

## (5) Network Setting 2: Dial Tone Detection

(a) Use

- To set whether to use the Dial Tone detection or not.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF

## (6) Network Setting 2: DC-LOOP Check

(a) Use

- Checks the DC loop current before dialing.
- When the current is zero, an error occurs. (T.80)
- You can change the setting to be compliant to standards in other countries. In Japan, set this parameter to OFF.
(b) Default setting
- OFF
(c) Setting item
- ON
- OFF
(7) Network Setting 2: min. RING OFF Time
(a) Use
- Minimum time to recognize ringer interval.

| a To avoid judging "a" as a ring-off time. | b $\quad$ Ring-off time |
| :--- | :--- |

(b) Default setting

- 0 ms
(c) Setting range
- 0 to 1000 ms (step: 100 ms )
(8) Network Setting 2: Response Waiting Time
(a) Use
- To set the response waiting time.

| Response waiting timer $(55 \mathrm{sec})$ | Calling | Starts after dialing. Until CED is received. |
| :--- | :--- | :--- |

(b) Default setting

- 55 s
(c) Setting range
- 35 to 115 s (steps: 1 s)
(9) Network Setting 2: Pause Time
(a) Use
- The pause time for one pause key (pause between digits)
(b) Default setting
- 1 s
(c) Setting range
- 1 to 7 s (steps: 1 s )

### 5.23.3 Communication

(1) Protocol: V8 / V34 Protocol
(a) Use

- To set whether to use the V.8/V. 34 protocol or not.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
(2) Int'I Comm. Function: Foreign Communication Function
(a) Use
- To set whether or not to use the mode that employs the number of DIS waiting times.
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
(3) Int'l Comm. Function: No. of DIS Waiting Times at Foreign Communication
(a) Use
- To set the number of DIS waiting times.
(b) Default setting
- 1
(c) Setting item
- 1
- 2
(4) Int'l Comm. Function: V34 Speed
(a) Use
- To set the V. 34 international communication mode speed.
(b) Default setting
- 28800 bps
(c) Setting range
- 16800 to 33600 bps (step: 2400 bps)
(5) Int'l Comm. Function: V17 Speed
(a) Use
- To set the V. 17 international communication mode speed.
(b) Default setting
- 7200 bps
(c) Setting range
- 7200 to 14400 bps (step: 2400 bps)
(6) Int'I Comm. Function: V29 Speed
(a) Use
- To set the V. 29 international communication mode speed.
(b) Default setting
- 4800 bps
(c) Setting range
- 2400 to 9600 bps (step: 2400 bps)
(7) Others: ECM Function
(a) Use
- Set whether or not to cancel reception ECM (error correction mode).
(b) Default setting
- ON
(c) Setting item
- ON
- OFF
(8) Others: Frame Size at ECM TX
(a) Use
- To set the frame size at ECM transmission.
(b) Default setting
- 256
(c) Setting item
- 64
- 256
(9) Others: Coding Ability
(a) Use
- To set the coding ability.
- Effective to both sending and reception.
(b) Default setting
- MH/MR/MMR/JBIG
(c) Setting item
- MH
- MH/MR
- MH/MR/MMR
- MH/MR/MMR/JBIG

### 5.23.4 Initialize

(1) Use

- The following data can be initialized.

$$
\begin{array}{|l|l|}
\hline \text { Fax Function Parameter } & \text { The function set condition is initialized into the Factory Default condition. }
\end{array}
$$

## NOTICE

- For the formats of the Abbreviated Registration Data, the Program Registration Data, The Group Registration Data, and the F-code Box Data, see "Fax File Format".

## (2) Procedure

1. Turn the main power switch $O N$.
2. Wait until the warm-up cycle is completed.

NOTE

- Wait until an alarm message, such as "Preparing fax/scan", disappears.
" Execution of "Initialization" before the warm-up cycle is completed may not be successful.

3. Call the Service Mode to the screen.
4. Touch [FAX].
5. Select a Line.
6. Touch [Initialization].
7. Touch [Fax Function Parameter].
8. Touch [Yes].
9. When a verification message is displayed, touch [Yes].
10. The data selected is initialized.

### 5.23.5 FAX Line Std. Setting

(1) Use

- Used to confirm fax settings.

NOTE

- When the below settings are changed by this setting, the [Service Mode] -> [FAX] -> [Line 2, Line 3, Line 4] -> [Network] or [Service Mode] -> [FAX] -> [Line1] -> [System] settings are also changed.
FAX Line Std. Setting 1: Receive Signal Detection Mode, BUSY TONE Detection, No. of Times of Busy Tone Detection
FAX Line Std. Setting 2: Dial Tone Detection, Pause Time, Response Waiting Time
FAX Line Std. Setting 3: Error Page Resending, Number of Redial
- If the following settings are changed, the settings from [Administrator Settings] -> [Fax Settings] -> [Line Parameter Setting] is also changed.
FAX Line Std. Setting 1:Number of RX Call Rings, Receive Time Interval Setting
FAX Line Std. Setting 4: Number of Redials, Redial Interval, Line Monitor Sound Volume (Send), Line Monitor Sound Volume (Receive)

## (2) FAX Line Std. Setting-V17 RX Error

(a) Use

- This configures whether or not to lower the reception speed when reattempting to receive data after a receive error occurs.
(b) Procedure

1. Call the Service Mode to the screen.
2. Select [FAX] -> [Line 2/ Line 3/ Line 4] -> [FAX Line Std. Setting] -> [FAX Line Std. Setting 3]
3. Select either [ON] or [OFF] for [V17 RX Error].

NOTE

- When this is set to [ON], the device will use V17 to receive data the next time after a receive error occurs.
(c) Default setting
- ON
(d) Setting item
- ON
- OFF

### 5.24 FAX setting (Address parameter list: for line 1, line 2, line 3 and line 4)

5.24.1 Ob000\#

| Address | Items | $\begin{aligned} & \text { Bit } \\ & \text { No } \end{aligned}$ | Contents | Setting | Default |  |  | CSRC |  |

### 5.29 Finisher

5.29.1 FS-FN adjustment - Center Staple Position (FS-534SD/FS-536SD/FS-537SD)
(1) Use

- Adjust the stapling position for each paper size when printing with the center staple function.
- To adjust the center staple position by making the staple position match the folding position.
(2) Setting range

- Width A should fall within the following target.

$$
\begin{array}{|l|l|}
\hline \text { Target } & 0 \pm 1.0 \mathrm{~mm} \\
\hline
\end{array}
$$

| Setting range | -10.0 mm to +10.0 mm (1 step: 0.1 mm ) |
| :--- | :--- |

## (3) Procedure

## NOTE

- After [Half-Fold Position] adjustment, make this [Center Staple Position] adjustment.

1. Place five sheets of originals on the DF.
2. Make a set of copy in the saddle stitching mode.
3. Check the amount of horizontal deviation (width $A$ ) between the staple and the half fold positions on the set of copy.
4. If width $A$ is out of the target, make the following adjustment.
5. Call the Service Mode to the screen.
6. Touch [Finisher] -> [FS-FN adjustment] -> [Center Staple Position].
7. Touch the paper size where staple position is adjusted.
8. Look at the copy and adjust the staple position with the [+]/[-] key.

## NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

9. Touch [Test Copy].
10. Select the tray loading paper for the test copy.
11. Touch [3].
12. Touch [Fold \& Staple], and press the start key.
13. Check the staple positions deviate.
14. Touch [END] to return to the adjustment screen.
15. Touch [OK] twice.
16. Touch [Exit] on the Service Mode screen.

### 5.29.2 FS-FN adjustment - Half-Fold Position (FA-534SD/FS-536SD/FS-537SD)

(1) Use

- Use this adjustment to adjust the half-fold position in half-fold printing.
(2) Setting range

- Width A should fall within the following target.

| Target | A = Less than 1.0 mm |
| :--- | :--- |
| Setting range | -10.0 mm to $+10.0 \mathrm{~mm}(1 \mathrm{step}: 0.1 \mathrm{~mm})$ |

## (3) Procedure

1. Place two sheets of originals on the ADF.
2. Make a copy in the folding mode
3. Fold the copies along the crease.
4. Measure the amount of width $A$.
5. If width $A$ is out of the target, make the following adjustment.
6. Call the Service Mode to the screen.
7. Touch [Finisher] -> [FS-FN adjustment] -> [Half-Fold Position].
8. Touch the paper size where half-fold position is adjusted.
9. Look at the copy and adjust the half-fold position with the [+] / [-] key.

## NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size. 10. Touch [Test Copy].

11. Select the tray loading paper for the test copy.
12. Touch [3].
13. Touch [Half-Fold], and press the start key.
14. Check the crease positions deviate.
15. Touch [END] to return to the adjustment screen.
16. Touch $[\mathrm{OK}]$ twice.
17. Touch [Exit] on the Service Mode screen.

### 5.29.3 FS-FN adjustment - Punch Centering Fine Adj (PK-523)

## (1) Use

- Adjusts the vertical position of the punch holes.
(2) Setting range

- The positions of the punch holes relative to the center in the paper feeding direction should fall within the following target.

| Target | 2-4 hole | - The distance A between holes: 80 mm * <br> - Deviation amount in the vertical direction relative to the center in the paper feeding direction: $\pm 1.0 \mathrm{~mm}$ |
| :---: | :---: | :---: |
|  | 2-3 hole (2 hole) | - The distance A between holes: 70 mm * <br> - Deviation amount in the vertical direction relative to the center in the paper feeding direction: $\pm 1.0 \mathrm{~mm}$ |
|  | 2-3 hole (3 hole) | - The distance A between holes:108 mm* <br> - Deviation amount in the vertical direction relative to the center in the paper feeding direction: $\pm 1.0 \mathrm{~mm}$ |
|  | SWE4 hole | - The distance A1 between holes: 70 mm * <br> - The distance A2 between holes: 21 mm * <br> - Deviation amount in the vertical direction relative to the center in the paper feeding direction: $\pm 1.0 \mathrm{~mm}$ |
| Setting range | -5.0 mm to +5.0 mm (1 step: 0.1 mm ) |  |

- *: It is not possible to adjust the A value of the distance between holes.

## (3) Procedure

NOTE

- Following describe an exemplary case in which the number of punch holes is two. Perform the same adjustment procedure for other numbers of holes.

1. Make a 1sided copy sample in the punch mode. Face the printed surface upward.

[A] The distance between holes
[B] Paper feeding direction
[a] Upper punch hole
[b] Lower punch hole
2. Fold the paper in half along the center in the paper feeding direction.

3. Measure the deviation amount [C] between punch holes [a] and [b].

4. If the deviation between the punch holes $[\mathrm{a}]$ and $[\mathrm{b}]$ is $[\mathrm{CA}]$, the punch holes deviate upward in the figure relative to the paper folding line [F] (center in the paper feeding direction).

- Ex.1: Punch hole deviation amount [DA] = Measured value [CA] $3 \mathrm{~mm} \div 2=-1.5 \mathrm{~mm}$ (hole positions deviate upward) Ex. 1

5. If the deviation between the punch holes $[a]$ and $[b]$ is $[C B]$, the punch holes deviate downward in the figure relative to the paper folding line $[F]$ (center in the paper feeding direction).

- Ex.2: Punch hole deviation amount [DB] = Measured value [CB] $3 \mathrm{~mm} \div 2=+1.5 \mathrm{~mm}$ (hole positions deviate downward) Ex. 2

6. Complete the adjustment, if the deviation amount [D] between punch holes [a] and [b] falls within the target ( $\pm 1.0 \mathrm{~mm}$ or less).

- Ex.3: Punch hole deviation amount $[\mathrm{D}]=$ Measured value $[\mathrm{C}] 0 \mathrm{~mm} \div 2=0 \mathrm{~mm}$ (punch hole deviation amount falls within the target)

Ex. 3

7. Call the Service Mode to the screen
8. Touch [Finisher] -> [FS-FN adjustment] -> [Punch Centering Fine Adj].
9. Touch the paper size where punch centering is adjusted.
10. Look at the copy and adjust the punch centering with the $[+] /[-]$ key.

- To move the hole position downward: Enter the value of [+]
- To move the hole position upward: Enter the value of [-]

## NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

11. Touch [Test Copy].
12. Select the tray loading paper for the test copy.
13. Touch [3].
14. Select the number of punch holes in the "Punch" list, and then press the start key
15. Check the punch hole positions.
16. Touch [END] to return to the adjustment screen.
17. Touch [OK] twice.
18. Touch [Exit] on the Service Mode screen.

### 5.29.4 FS-FN adjustment - Punch F. Sensor Intensity Adj. (PK-523)

(1) Use

- Adjusts the sensitivity (light intensity) of the PK punch front sensor of the punch kit.

## (2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Finisher] -> [FS-FN adjustment] -> [Punch F. Sensor Intensity Adj.].
3. Touch Start key.
4. Confirm that the result is OK.

NOTE

- When NG appears, check whether the punch kit is properly installed.

5. Touch $[\mathrm{OK}]$ twice.
6. Touch [Exit] on the Service Mode screen.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

### 5.29.5 FS-FN adjustment - Punch vertical position (Z-fold) (ZU-609/PK-523)

(1) Use

- To adjust the position of the punch hole in the vertical direction when $\mathrm{ZU}-609$ is in use.
(2) Setting range

- The positions of the punch holes relative to the center in the paper feeding direction should fall within the following target.

| Target | 2-4 hole | - The distance A between holes: 80 mm * <br> - Deviation amount in the vertical direction relative to the center in the paper feeding direction: $\pm 1.0 \mathrm{~mm}$ |
| :---: | :---: | :---: |
|  | 2-3 hole (2 hole) | - The distance A between holes:70 mm* <br> - Deviation amount in the vertical direction relative to the center in the paper feeding direction: $\pm 1.0 \mathrm{~mm}$ |
|  | 2-3 hole (3 hole) | - The distance A between holes:108 mm* <br> - Deviation amount in the vertical direction relative to the center in the paper feeding direction: $\pm 1.0 \mathrm{~mm}$ |
| Setting range | -5.0 mm to +5.0 mm (1step: 0.1 mm ) |  |

-     * It is not possible to adjust the $\mathbf{A}$ value of the distance between holes.

## (3) Procedure

## NOTE

- Following describe an exemplary case in which the number of punch holes is two. Perform the same adjustment procedure for other numbers of holes

1. Make a 1 sided copy sample in the punch mode (when PK-523 is mounted, select Z-fold + punch mode). Face the printed surface upward.

[A] The distance between holes
[B] Paper feeding direction
[a] Upper punch hole
[b] Lower punch hole
2. Fold the paper in half along the center in the paper feeding direction.

3. Measure the deviation amount [C] between punch holes [a] and [b].

4. If the deviation between the punch holes $[a]$ and $[b]$ is [CA], the punch holes deviate upward in the figure relative to the paper folding line [F] (center in the paper feeding direction).

- Ex.1: Punch hole deviation amount [DA] = Measured value [CA] $7 \mathrm{~mm} \div 2=-3.5 \mathrm{~mm}$ (hole positions deviate upward)

Ex. 1

5. If the deviation between the punch holes $[a]$ and $[b]$ is $[C B]$, the punch holes deviate downward in the figure relative to the paper folding line $[F]$ (center in the paper feeding direction).

- Ex.2: Punch hole deviation amount [DB] = Measured value [CB] $7 \mathrm{~mm} \div 2=+3.5 \mathrm{~mm}$ (hole positions deviate downward) Ex. 2

6. Complete the adjustment, if the deviation amount $[\mathrm{D}]$ between punch holes $[\mathrm{a}]$ and $[\mathrm{b}]$ falls within the target ( $\pm 3.0 \mathrm{~mm}$ or less).

- Ex.3: Punch hole deviation amount [D] = Measured value [C] $0 \mathrm{~mm} \div 2=0$ (punch hole deviation amount falls within the target)

Ex. 3

7. Call the Service Mode to the screen
8. Touch [Finisher] -> [FS-FN adjustment] -> [Punch vertical position (Z-fold)].
9. Make the setting using [+] or [-].

- To move the hole position downward: Enter the value of [+]
